Title of Outcome Measure (Improvement Target): ED Appropriate Utilization

Unique RHP project identification number: 138910807.3.2

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

Category 3 – OD-9 Preventive and Primary Care

- IT-9.2 ED Appropriate Utilization

Decrease inappropriate Emergency Department use by expanding access to pediatric primary care by establishing a 24/7 nurse triage line and expanding primary care hours in MyChildren's locations.

Process Milestones

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems
- **DY3:**
  - **Milestone 4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - **Milestone 5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for Each Year:

- **DY4:**
  - **Milestone 6 IT 9.2:** Achieve 5% reduction in Emergency Department use for patients enrolled in MyChildren's for the entire DY4 timeframe compared to DY3 Emergency Department use for the same patient cohort.
- **DY5:**
  - **Milestone 7 IT 9.2:** Achieve 10% reduction in Emergency Department use for patients enrolled in MyChildren's for the entire DY4 and DY5 timeframe compared to DY3 Emergency Department use for the same patient cohort.

Rationale

Improving access to primary care by offering expanded office hours and providing a 24/7 nurse triage telephone service should reduce inappropriate use as well as overall use of Emergency Department services. Studies have demonstrated an improved appropriate use of Emergency Departments services (both decrease in inappropriate use and increase in use when that level of care is warranted) by parents who use a 24 hour nurse telephone triage service prior to seeking care. Process and improvement milestones were selected to support the successful implementation of the project.

Project Valuation

This project was valued using the score for project 1.2 which was valued using the using the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	9	1.80
Population Served / Project Size	25%	5	1.25
Alignment with Community Needs	20%	9	1.80
Cost Avoidance	15%	8	1.20
Sustainability	15%	8	1.20
Partnership Collaboration	5%	8	0.40
	100%		7.65

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact

Moderate Weakness: Lessens impact

Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into

adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): Other Admission Rate**:** Pediatric Asthma Inpatient Admission Reduction (Provider Defined Outcome)

Unique RHP project identification number: 138910807.3.3

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

Category 3 – OD-1: Primary Care and Chronic Disease Managment
IT 2.13 Other Admission Rates: Pediatric Quality Indicator PDI #14 Asthma Admission Rate (Standalone measure).

This is a provider-defined measure. This measure is based on IT 2-12 Prevention Quality Indicator (PQI) Composite Measures for Potentially Preventable Hospitalizations for Ambulatory Care Sensitive Conditions which are adult-based measures. The Pediatric Quality Indicator PDI #14 will be used for the data definition for the numerator in the outcome measure. PDI #14 was selected because asthma management will be a major component of the disease management program. Past history with Children's limited implementation of an asthma management program demonstrated reduced hospital admissions for asthma in the patients enrolled in the program.

Process Milestones

- **DY2:**
  - Milestone **1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - Milestone **2 P2:** Establish baseline rates
  - Milestone **3 P3:** Develop and test data systems
- **DY3:**
  - Milestone **4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - Milestone **5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for Each Year

- **DY4:**
  - Milestone **6 IT 2.13:** Achieve 5% reduction in Asthma Admission in MyChidren's patients enrolled in disease management services for a continuous 12 month period compared with number of admissions in the 12 months prior to enrollment in disease management.

- **DY5:**
    - Milestone 7 **IT 2.13:** Achieve 10% reduction in Asthma Admission in MyChidren's patients enrolled in disease management services for a continuous 24 month period compared with number of admissions in the 12 months prior to enrollment in disease management.

Rationale

This measure is based on IT 2-12 Prevention Quality Indicator (PQI) Composite Measures for Potentially Preventable Hospitalizations for Ambulatory Care Sensitive Conditions which are adult-based measures. The Pediatric Quality Indicator PDI #14 will be used for the data definition for the numerator in the outcome measure. PDI #14 was selected because asthma management will be a major component of the disease management program. Past history with Children's limited implementation of an asthma management program demonstrated reduced hospital admissions in the patients enrolled in the program. Process and improvement milestones were selected to support the successful implementation of the project.

Project Valuation

This project was valued using the score for Project 1.3 which was based on the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	7	1.40
Population Served / Project Size	25%	6	1.50
Alignment with Community Needs	20%	9	1.80
Cost Avoidance	15%	6	0.90
Sustainability	15%	8	1.20
Partnership Collaboration	5%	9	0.45
	100%		7.25

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact
Moderate Weakness: Lessens impact
Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): Follow-up after Hospitalization for Mental Illness

Unique RHP project identification number: 138910807.3.4

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

OD 1: Primary and Preventive Care and Chronic Disease Management
IT 1-20 Other Outcome Improvement Target: Follow-up visits after new anti-depressant medication prescription. This is a provider-defined outcome measure.

This improvement target was selected to support the appropriate management of pediatric patients when a new antidepressant is started based on guidelines by the FDA. It is important to have frequent contact with pediatric patients during initiation of an antidepressant due to potential for worsening of symptoms and increased suicidal ideations.

Process Milestones:

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems
- **DY3:**
  - **Milestone 4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - **Milestone 5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for Each Year

- **DY4:**
  - **Milestone 6 IT 1.20:** 25% of patients on a new antidepressant prescribed by the MyChildren's psychiatrist receive 4 follow-up visits in the four months after antidepressant initiation.
- **DY5:**

- **Milestone 7 IT 1.20: 30**% of patients on a new antidepressant prescribed by the MyChildren's psychiatrist receive 4 follow-up visits in the four months after antidepressant initiation.

Rationale

Expand pediatric behavioral health capacity in CMC primary care settings to align and coordinate care for behavioral and medical illnesses in an attempt to improve patient/family self-management and reduce unnecessary exacerbation of chronic illnesses. Collaborate with Timberlawn Services for coordination of care between medical services and behavioral health services. This improvement target was selected to support the appropriate management of pediatric patients when a new antidepressant is started based on guidelines by the FDA. It is important to have frequent contact with pediatric patients during initiation of an antidepressant due to potential for worsening of symptoms and increased suicidal ideations. Process and improvement milestones were selected to support the successful implementation of the project.

Project Valuation

This project was valued using the value of Project 1.4 which was developed using the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	7	1.40
Population Served / Project Size	25%	7	1.75
Alignment with Community Needs	20%	9	1.80
Cost Avoidance	15%	6	0.90
Sustainability	15%	8	1.20
Partnership Collaboration	5%	9	0.45
	100%		7.50

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact
Moderate Weakness: Lessens impact
Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): ED Appropriate Utilization

Unique RHP outcome identification number: 138910807.3.5

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

OD: 9: preventive and Primary Care
IT 9.2: ED Appropriate Utilization

Decrease inappropriate Emergency Department use by transforming MyChildren's primary care offices into NCQA certified medical homes.

Process Milestones

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems
- **DY3:**
  - **Milestone 4 P4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities**
  - **Milestone 5 P5: Disseminate findings, including lessons learned and best practices to stakeholders**.

Outcome Improvement Targets for each year

- **DY4:**
  - **Milestone 6 IT 9.2:** Achieve 5% reduction in Emergency Department use for patients enrolled in MyChildren's primary care settings with NCQA-designated medical home certification during the entire DY4 timeframe compared to baseline emergency department use by the same patient population in the 12 months prior to initiation of medical home designation process.
- **DY5:**
  - **Milestone 7 IT 9.2:** Achieve 10% reduction in Emergency Department use for patients enrolled in MyChildren's primary care settings with NCQA-designated medical home certification during the entire DY4 timeframe compared to baseline

emergency department use by the same patient population in the 12 months prior to initiation of medical home designation process.

Rationale

Improving access to primary care by opening new pediatric primary care offices, providing a medical home for children with complex and chronic medical conditions and expanding hours for urgent care should reduce inappropriate use as well as overall use of Emergency Department services. Process and improvement milestones were selected to support the successful implementation of the project.

Outcome Measure Valuation

This project was valued using the score for project 2.1 which was valued using the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	9	1.80
Population Served / Project Size	25%	8	2.00
Alignment with Community Needs	20%	9	1.80
Cost Avoidance	15%	8	1.20
Sustainability	15%	9	1.35
Partnership Collaboration	5%	7	0.35
	100%		8.50

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact

Moderate Weakness: Lessens impact

Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): ED Appropriate Utilization – Pediatric/ Young Asthma Emergency Department Visits

Unique RHP outcome identification number: 138910807.3.6

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

OD9: Primary and Preventive Care
IT 9.3 Pediatric/Young Adult Asthma Emergency Department Visits

Decrease Pediatric and Young Adult Asthma Emergency Department Visits by implementing an evidenced-based health promotions program in the community focusing on asthma.

Process Milestones

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems

- **DY3:**
  - **Milestone 4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - **Milestone 5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- **DY4:**
  - **Milestone 6 IT 9.3** Achieve 10%" reduction in Pediatric Asthma Emergency Department Visits, compared with Year 2 baseline data.

- **DY5:**
  - **Milestone 6 IT 9.3** Achieve 10%" reduction in Pediatric Asthma Emergency Department Visits, compared with Year 2 baseline data.

Rationale

By coordinating community-based efforts for reducing the incidence of asthma and increasing asthma management skills as well as promoting overall health and healthy lifestyles, the use of the Emergency Department for treatment of pediatric and young adult asthma should decline. Process and improvement milestones were selected to support the successful implementation of the project.

Outcome Measure Valuation

This project was valued using the score for project 2.2 which was valued using the using the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	9	1.80
Population Served / Project Size	25%	9	2.25
Alignment with Community Needs	20%	9	1.80
Cost Avoidance	15%	7	1.05
Sustainability	15%	7	1.05
Partnership Collaboration	5%	9	0.45
	100%		8.40

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact

Moderate Weakness: Lessens impact

Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): ED Appropriate Utilization

Unique RHP outcome identification number: 138910807.3.7

Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

OD9: Primary and Preventive Care
IT 9.2 ED Appropriate Utilization

Decrease inappropriate Emergency Department use by expanding use of patient navigators and care coordinators for pediatric patients and their families who habitually use the emergency department for primary care and for patients and families who need assistance in navigating the health care system.

Process Milestones

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems

- **DY3:**
  - **Milestone 4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - **Milestone 5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year

- **DY4:**
  - **Milestone 6 IT-9.2:** Achieve 5% reduction in Emergency Department use," based on baseline data for this patient population.

- **DY5:**
  - **Milestone 7 IT-9.2:** Achieve 10% reduction in Emergency Department use," based on baseline data for this patient population.

Rationale

Developing patient/family navigation for patients and families who habitually use the Emergency Department for primary care and for patients and families who need assistance in navigating the healthcare system should reduce inappropriate use as well as overall use of Emergency Department services. Process and improvement milestones were selected to support the successful implementation of the project.

Outcome Measure Valuation

This project was valued using the score for Project 2.3 which was based on the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	9	1.80
Population Served / Project Size	25%	8	2.00
Alignment with Community Needs	20%	8	1.60
Cost Avoidance	15%	8	1.20
Sustainability	15%	9	1.35
Partnership Collaboration	5%	7	0.35
	100%		8.30

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact

Moderate Weakness: Lessens impact

Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measure (Improvement Target): ED Appropriate Utilization

Unique RHP outcome identification number: 138910807.3.8
Performing Provider Name/TPI: Children's Medical Center/138910807

Outcome Measure Description

OD9: Primary and Preventive Care
IT 9.2 ED Appropriate Utilization

Decrease inappropriate Emergency Department use by implementing a transition program to provide continuous care during transition from pediatric providers to adult providers for selected cohorts of patients.

Process Milestones

- **DY2:**
  - **Milestone 1 P1:** Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementations plans.
  - **Milestone 2 P2:** Establish baseline rates
  - **Milestone 3 P3:** Develop and test data systems
- **DY3:**
  - **Milestone 4 P4:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - **Milestone 5 P5:** Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for Each Year:

- **DY4:**
  - **Milestone 6 IT 9.2:** Achieve 5% reduction in Children's Emergency Department use for young adults who have completed the transition program and have "graduated" into adult care. Improvement will be based on comparison with baseline data established in DY2.
- **DY5:**
  - **Milestone 7 IT 9.2:** Achieve 10% reduction in Children's Emergency Department use for young adults who have completed the transition program and have "graduated" into adult care. Improvement will be based on comparison with baseline data established in DY2.

Rationale

Implementing/expanding care transitions program assisting in transitioning patients who are aging out of pediatric care and securing them services by adult providers should reduce inappropriate use as well as overall use of Emergency Department services. Process and improvement milestones were selected to support the successful implementation of the project.

Outcome Measure Valuation

This project was valued using the score for project 2.4 which was valued using the RHP 9 Scoring Criteria Guidance with a 1 to 9 scoring range and a weighted score based on:

	Weight	Score (1-9)	Weighted Score
Transformational Impact	20%	7	1.40
Population Served / Project Size	25%	5	1.25
Alignment with Community Needs	20%	6	1.20
Cost Avoidance	15%	6	0.90
Sustainability	15%	8	1.20
Partnership Collaboration	5%	9	0.45
	100%		6.40

Scoring Guidance:

Scoring Grid		General Scoring Frame
High	9	Exceptionally strong with essentially no weaknesses
	8	Extremely strong with negligible weaknesses
	7	Very strong with only minor weaknesses
Medium	6	Strong but with numerous minor weaknesses
	5	Strong but with at least one moderate weakness
	4	Some strengths but also some moderate weaknesses
Low	3	Some strengths but with at least one major weakness
	2	A few strengths and a few major weaknesses
	1	Very few strengths and numerous major weaknesses

Minor Weakness: Easily addressable weakness, does not substantially lessen impact

Moderate Weakness: Lessens impact

Major Weakness: Severely limits impact

Each point on the scale was given a value of $1,609,640 based on expected savings, improved outcomes and improved satisfaction with the healthcare system of the life of the project and beyond the life of the project as all patients are pediatric with expected impact to continue into adulthood. The overall project value was then divided between Category 1, 2 and 3 based on HHSC guidelines with Category 4 being allotted the maximum 15% in later years by reporting on the optional Domain 6.

Title of Outcome Measurement (Improvement Target): IT-9.1 Decrease in Mental Health Admissions and Readmissions to Criminal Justice Settings

Unique RHP Outcome identification number: 121758005.3.1

Performing Provider Name/TPI: Dallas County/121758005

Outcome Measure Description

IT-9.1: Decrease in Mental Health Admissions and Readmissions to Criminal Justice Settings
Decreasing the number of mental health admissions and re-admissions to the Dallas County Jail is directly related to the associated Category 1 project and captures the success of the Category 1 project in reducing the number of persons in behavioral health (including substance abuse) crisis in the Dallas County Jail. In Dallas County, the proportion of persons admitted to the Dallas County Jail with a history of receiving behavioral health services through the NorthSTAR system has increase each year since 2007.

Process Milestones

DY2: P-1, Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
P-3, Develop and Test Data Systems

DY3: P-2, Establish Baseline Rates
P-4, Conduct PDSA cycles
P-5, Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets

DY4: IT 9.1 – Reduce Mental Health Admissions and Re-Admissions to the Dallas County Jail by 2% from baseline
DY5: IT 9.2 – Reduce Mental Health Admissions and Re-Admissions to the Dallas County Jail by 3% from baseline

Rationale

The core goal of the Category 1 project is to increase access to community-based services for persons in behavioral health crisis, with the associated decrease in the number of persons with behavioral health treatment needs admitted or re-admitted to the Dallas County Jail. The initial planning that will occur in DY 2 and DY 3 will inform and determine the baseline for the actual outcome targets for DY 4 and 5.

Outcome Measure Valuation

The outcome measure valuation is based upon reducing the number of persons with behavioral health treatment needs who are admitted or re-admitted to the Dallas County Jail. There is a specific cost to Dallas County for each day someone is in jail and costs to Parkland Hospital for providing the behavioral health care while those individuals are in the jail. The planning work of DY 2 and 3 will inform that expected reduction in behavioral health admissions and re-admissions to the Dallas County Jail (and the associated cost savings) during DY 4 and 5.

Title of Outcome Measurement (Improvement Target): ED Appropriate Utilization for Persons in Behavioral Health Crisis

Unique RHP Outcome Identification Number: 121758005.3.2

Performing Provider Name/TPI: Dallas County/121758005

Outcome Measure Description

IT 9.2: ED Appropriate Utilization

ED Appropriate Utilization is directly related to the associated Category 1 project and captures the success of the Category 1 project in reducing emergency department utilization for persons in behavioral health (including substance abuse) crisis. In Dallas County, the utilization of emergency department services continues to increase while utilization of community-based crisis services had not increased at the same rate.

Process Milestones

DY2: P-1, Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
P-3, Develop and Test Data Systems

DY3: P-2, Establish Baseline Rates
P-4, Conduct PDSA cycles
P-5, Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets

DY4: IT 9.2 – Reduce Emergency Department Visits for persons in behavioral health crisis by 3.5% from baseline
DY5: IT 9.2 – Reduce Emergency Department Visits for persons in behavioral health crisis by 4.5% from baseline

Rationale

The core goal of the Category 1 project is to increase access to community-based services for persons in behavioral health crisis, with the associated decrease in the use of emergency departments for persons in crisis. The initial planning that will occur in DY 2 and DY 3 will inform and determine the baseline for the actual outcome targets for DY 4 and 5.

Outcome Measure Valuation

The outcome measure valuation is based upon reducing the number of persons who access emergency departments when in behavioral health crisis, with an associated increase in access to community-based (and lower cost) services. There is a specific cost to the local system each time a person accesses emergency department services. The planning work of DY 2 will inform that expected reduction in emergency department utilization (and the associated cost savings) during DY 4 and 5.

Title of Outcome Measure (Improvement Target): IT-11.2: Improvement in disparate health outcomes for target population, including identification of the disparity gap

Unique RHP outcome identification number(s): 121758005.3.3

Performing Provider Name/TPI: Dallas County/121758005

Outcome Measure Description

IT-11.2: Improvement in disparate health outcomes for target population including identification of disparity gap

- Numerator (TBD by Performing Provider): Pre Assessment Score Average
- Denominator (TBD by Performing Provider): Post Assessment Score Average

Process Milestones

- DY2:
  - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine time lines and document implementation plans
- DY3:
  - P-2: Establish base line
  - P-5: Disseminate findings, including lessons learned

Outcome Improvement Targets for each year

- DY4:
  - IT-11.2: Improvement in disparate health outcomes for target population including identification of disparity gap. Goal is 5% improvement on pre-assessment scores

- DY5:
  - IT-11.2: Improvement in disparate health outcomes for target population including identification of disparity gap. Goal is 10% improvement on pre-assessment scores

Rationale

The rate of testing of new solutions and ideas is one of the greatest predictors of the success of health education improvement efforts. According to the USPSTF, high intensity behavioral counseling among adults at increased risk for STIs reduces the incidence of STIs. These health promotion interventions can include those offered through multiple sessions, in groups, and/or before and after screening. DCHHS will use epidemiology surveillance data as the evidence-base to determine counseling locations and intervention population.

Outcome Measure Valuation

The rationale for valuing the project is based on community benefit due to decreasing preventable hospitalizations. Each health promotion participant was calculated to be one less person entering into the local healthcare delivery system.

The following valuation is based on a literature review of various community health worker/health educator interventions that include economic impact analyses. The example interventions are population-based in the community setting with consistent costs, and do not include hospital-based treatment and equipment interventions that would display increased cost variability.

Valuation examples are from: Social return on investment: Community Health Workers in cancer outreach, American Cancer Society Midwest Division (2012); Community Health Workers in Massachusetts: Improving Health Care and Public Health, Massachusetts Department of Health, Office of Community Health Workers (2009); and Outcomes of Community Health Worker Interventions, Agency for Healthcare Research and Quality (2009).

The DCHHS approach for valuing the first outcome measure is based on financial and human capital resources governing the capacity of the health department to implement a health promotion program that required planning, travel, and new staff.

Outcome Measure Valuation

The rationale for valuing the project is based on community benefit due to decreasing preventable hospitalizations. Each health promotion participant was calculated to be one less person entering into the local healthcare delivery system.

The following valuation is based on a literature review of various community health worker/health educator interventions that include economic impact analyses. The example interventions are population-based in the community setting with consistent costs, and do not include hospital-based treatment and equipment interventions that would display increased cost variability.

Valuation examples are from: Social return on investment: Community Health Workers in cancer outreach, American Cancer Society Midwest Division (2012); Community Health Workers in Massachusetts: Improving Health Care and Public Health, Massachusetts Department of Health, Office of Community Health Workers (2009); and Outcomes of Community Health Worker Interventions, Agency for Healthcare Research and Quality (2009).

The DCHHS approach for valuing the first outcome measure is based on financial and human capital resources governing the capacity of the health department to implement a health promotion program that required planning, travel, and new staff.

Title of Outcome Measure (Improvement Target): IT-11.3: Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity

Unique RHP outcome identification number(s): 121758005.3.7

Performing Provider Name/TPI: Dallas County/ 121758005

Outcome Measure Description

IT-11.3: Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity

- Numerator (TBD by Performing Provider): Pre Assessment Score Average
- Denominator (TBD by Performing Provider): Post Assessment Score Average

Process Milestones

- DY2:
  - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine time lines and document implementation plans
- DY3:
  - P-2: Establish base line

Outcome Improvement Targets for each year

- DY4:
  - IT-11.3: Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity. Goal is 5% improvement on pre-assessment scores
- DY5:
  - IT-11.3: Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity. Goal is 10% improvement on pre-assessment scores

Rationale

Determined utilization rates will be based on self-reporting of screening intentions in the pre and post assessments. The rate of testing of new solutions and ideas is one of the greatest predictors of the success of health education improvement efforts. According to the USPSTF, high intensity behavioral counseling among adults at increased risk for STIs reduces the incidence of STIs. These health promotion interventions can include those offered through multiple sessions, in groups, and/or before and after screening. DCHHS will use epidemiology surveillance data as the evidence-base to determine counseling locations and intervention population.

Outcome Measure Valuation

The rationale for valuing the project is based on community benefit due to decreasing preventable hospitalizations. Each health promotion participant was calculated to be one less person entering into the local healthcare delivery system.

The following valuation is based on a literature review of various community health worker/health educator interventions that include economic impact analyses. The example interventions are population-based in the community setting with consistent costs, and do not include hospital-based treatment and equipment interventions that would display increased cost variability.

Valuation examples are from: Social return on investment: Community Health Workers in cancer outreach, American Cancer Society Midwest Division (2012); Community Health Workers in Massachusetts: Improving Health Care and Public Health, Massachusetts Department of Health, Office of Community Health Workers (2009); and Outcomes of Community Health Worker Interventions, Agency for Healthcare Research and Quality (2009).

The DCHHS approach for valuing the first outcome measure is based on financial and human capital resources governing the capacity of the health department to implement a health promotion program that required planning, travel, and new staff.

Title of Outcome Measure: OD-6 Patient Satisfaction

Unique RHP Outcome Identification Number: 137252607.3.1

Performing Provider Name/TPI: Dallas County MHMR Center dba Metrocare Services/137252607

Outcome Measure Description

OD-6 Patient Satisfaction
IT-6.1 Patient Satisfaction

Process Milestones:

Year 2

- [P-1]: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timeliness and document implementation plans

  Metric: Develop Gantt chart for timelines and use information gathering to complete program policies and procedures
  Goal: Complete project planning stage including Gantt chart for organizing timelines and Program Policy and Procedures to formalize prioritizes and operations
  Data Source: Metrocare Management Team

Year 3

- [P-4]: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

  Metric: Quality Management Department will use real time data for rapid cycle improvement to guide continuous quality improvement
  Goal: Routinely improve program operations and therapeutic interventions by implementing recommended changes from Quality Management
  Data Source: Audits conducted monthly by Quality Management Department

Year 4

- [P-4]: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

  Metric: Quality Management Department will use real time data for rapid cycle improvement to guide continuous quality improvement
  Goal: Routinely improve program operations and therapeutic interventions by implementing recommended changes from Quality Management
  Data Source: Audits conducted monthly by Quality Management Department

- **Outcome Improvement Target 1**

  IT-6.1: Patient Satisfaction
  Numerator: Overall patient satisfaction score for all domains for patients that have been treated by a CER student and/or resident
  Denominator: Overall patient satisfaction score for all domains for patients that have not been treated by a CER student or resident
  Goal: 10% increase in overall patient satisfaction scores.
  Data source: Patient Survey

  Year 5

- [P-4]: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

  Metric: Quality Management Department will use real time data for rapid cycle improvement to guide continuous quality improvement
  Goal: Routinely improve program operations and therapeutic interventions by implementing recommended changes from Quality Management
  Data Source: Audits conducted monthly by Quality Management Department

- **Outcome Improvement Target 2**

  IT-6.1: Patient Satisfaction
  Numerator: Overall patient satisfaction score for all domains for patients that have been treated by a CER student and/or resident
  Denominator: Overall patient satisfaction score for all domains for patients that have not been treated by a CER student or resident
  Goal: 20% increase in overall patient satisfaction scores.

Rationale:

By collaboratively intertwining present day evidence based education with real world interventions and supervision along with Metrocare's dynamic array of clinical services we are proposing that clients with have higher satisfaction scores compared to clients that do not receive services from one of our residents/trainees.

This protocol was chosen in order to connect the training and increase in number of professionals employed to serve the medically indigent client back to an emphasis on patient satisfaction.

The CER must remain focused not only on high quality training of best clinical practices but also on tracking and monitoring patient satisfaction scores. Patient satisfaction scores should lead our trainees in understanding that a patient whom is engaged and satisfied with his/her treatment is more likely to remain stable and use less intensive services than a patient whom is not satisfied with his or her care.
The CER is confident that the collaborative nature of combining mental health classroom education with a real world experience using evidence based practices along with supervision will produce higher satisfaction scores in the clients that have been treated by a resident and/or student versus a client that has not been treated by a student and/or resident.

Outcome Measure Valuation:

The true value of the Behavioral Health Workforce Initiative will be realized in the future. Identifying the declining deficit of qualified mental health professionals now, highlights the issue and allows the community to address the problem and work on a solution. Workforce issues and provider availability are becoming a major issue. In 2010, 95% of Texas psychiatrists enrolled as Medicaid providers were not accepting new patients. As the population continues to increase, the availability of a workforce to handle the growing number of patients will worsen without appropriate intervention to expand the number of practitioners.

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go un-provided. In regards to the workforce enhancement we assessed the cost of training each individual resident/trainee due to the lack of productivity taken away from the supervising clinician in addition to cost of paying the various institutions to have their students on site at Metrocare. We project that 10% of those that participate in DY 4 will report improved satisfaction scores and 20% of participants in DY 5 will report improvement in satisfaction scores.

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP Outcome Identification Number: 137252607.3.2

Performing Provider name/TPI: Dallas County MHMR Center dba Metrocare Services/137252607

Outcome Measure Description:
OD-1: Primary Care and Chronic Disease Management

IT-1.7 Controlling high blood pressure (NCQA-HEDIS 2012, NQF 0018) (standalone measure)

a. Numerator: The number of patients in the denominator whose most recent blood pressure (BP) is adequately controlled (BP ,140/90mm HG) during the measurement year

b. Denominator: Patients 18-85 years of age as of December 31 or the measurement year with a diagnosis of hypertension

c. Data Source: Electronic Medical record

d. Rationale: Approximately76.4 million (33.5%) of people in the United States have high blood pressure. Numerous clinical trials have shown that aggressive treatment of high blood pressure reduces mortality from heart disease, stroke and renal failure.. A pool of past clinical trials demonstrated that 5 to 6mm reduction in diastolic blood pressure was associated with a 42 percent reduction in stroke mortality and a 14% to 20% reduction in mortality from coronary heart disease. Literature from clinical trial indicates that 53 % to 75% of people under treatment achieved control of their blood pressure. Specifications of this measure are consistent with current guidelines, such as those of the USPSTF and the Joint National Committee.

Process Milestones:

DY 2

- P-1 Project Planning : identify Metrocare community mental health clinic sites which will accommodate the integration of physical health services in conjunction with previously existing behavioral health services at those sites. Sites will be assessed by Metrocare's facilities department for adequacy of physical space in the clinics, parking availability, access to public transportation (bus/train lines) and access by easily

navigated roads and freeways. Metrocare's Human Resources department will recruit and hire primary care physicians, advanced nurse practitioners, and RN's. Emphasis will be placed on hiring primary care providers who are willing to work with persons who have severe and persistent mental illnesses and developmental disabilities in a team-oriented environment.

DY 3

- P-2 Establish baseline rates: establish baseline rates of hypertension in people with diagnoses of severe and persistent mental illness in two existing Metrocare community mental health clinics which have been integrated to provide onsite primary health care in collaboration with behavioral healthcare services

- **Rationale:** Establishment of a co-located integrated care setting will allow persons who are being seen for services to have blood pressure monitoring at every appointment. Should elevations in blood pressure be found, that person will be able to access physical healthcare, and receive appropriate interventions on the same day he/she is being seen for a mental health service. These interventions would include preventive care and wellness education, such as dietary management and smoking cessation groups, as well as medication management when necessary. Metrocare's on-site pharmacies will allow patients who need medication, to obtain the same day. DY 3 will allow us to gather information on baseline rates of hypertension in 1500 persons with severe and persistent mental illness and treat appropriately.

DY 4 and 5

Continue systematic measuring of blood pressures on people receiving integrated healthcare services at Metrocare community clinics with a treatment goal of blood pressure maintenance <140/90. Continue and expand wellness programming and preventive interventions, as well as medication interventions for those who are unable to achieve adequate control with diet and exercise. In years 4 and 5 of the project, we expect to improve total numbers of persons identified as having high blood pressure by 10% in year 4 and by 15% in year 5.

- **Outcome Measure Valuation:** By offering easy access to preventive services, case management, chronic disease management, health education, medication and care coordination, we will be able to reduce associated medical complications of untreated hypertension and reduce associated costs of utilization for higher levels of care. A randomized trial study by Druss et al in 2001 showed that integrated medical care in

patients with serious psychiatric illness have increased preventive care utilization and greater improvement in health (Druss et.al.,2001).

We based our valuations on the IMPACT research trials which showed greater quality outcomes and improved health care costs. Long term savings on health care costs (4 yr) were up to $3,363 per patient. They had lower health care cost in every category including but not limited to outpatient and inpatient medical and surgical costs, pharmacy costs and other outpatient costs.
(Mauer & Jarvis, 2010). Our goal is to serve 3500 clients by year five and the cost savings will be 3500x$3,363 = $11,770,500.

Rationale:

The national association of State Mental Health Program Directors (NASMHPD) study in 2006 showed that patients with serious mental illness have increased mortality rates 2.3 times higher than the general population due to heart disease, and 2.7 times higher than general population due to diabetes. (Parks et al, 2006). Randomized trials which evaluated integrated models of primary care were associated with improved quality and outcomes of medical care (Druss, B et al, 2001).

Heart disease and stroke are two of the leading causes of death in the United States. More than 800,000 Americans die from heart attacks and strokes each year(Center for Disease Control). With primary care integration at our mental health clinics, we expect improvement in Category 3 standalone measures such as Controlling High Blood Pressure.

Persons with high blood pressure are at risk for a number of health complications (Mayo Foundation). These include:

- Heart attack or stroke
- Aneurysm
- Heart failure
- Vision loss
- Associated metabolic syndrome
- Trouble with memory or understanding

Data shows that lowering blood pressure by as little as 5 points can result in a 16% reduction in coronary heart disease and a 42 % reduction in strokes (SAMHSA-HRSA Center for Integrated Health Solutions).

Title of Outcome Measure (Improvement Target): IT-10.1 Quality of Life

Unique RHP Outcome Identification Number: 137252607.3.3

Performing Provider Name/TPI: Dallas County MHMR Center dba Metrocare Services/ 137252607

Outcome Measure Description

IT – 10.1: Quality of Life

Process Milestones

- DY2:
  - P-1 Project planning – Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY4:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY5:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year

- DY4:
  - I-10.1 Quality of Life
    - Numerator: Percent improvement in Quality of Life
    - Denominator: Number of patients who participated in ACT services
    - Goal: 25% of patients who participate in ACT services for will report improved quality of life
    - Data Source: Achenbach System of Empirically Based Assessment (ASEBA)
- DY5:
  - I-10.1 Quality of Life

- Numerator: Percent improvement in Quality of Life
- Denominator: Number of patients who participated in ACT services
- Goal: 50% of patients who participate in ACT services will report improved quality of life
- Data Source: Achenbach System of Empirically Based Assessment (ASEBA)

Rationale

Research indicates that adequate outpatient services decrease hospital use for behavioral health issues (SdosReis, et.al. 2008); thus intensive services that are comprehensive, offering multiple services to address the unique needs of the individual, must be provided. The services provided through ACT are proven effective at reducing hospitalizations and out-of-home placements while costing considerably less than expensive treatment episodes in the hospital, judicial system or residential treatment. For Category 3, the identified process milestones and improvement target were selected in order to measure the successful implementation and delivery of the ACT program. The goal of the program is to decrease potential readmission to psychiatric facilities, jails and state supported facilities by offering an intensive package of services that will stabilize the individual in the home/ community setting, increase their life skills and coping strategies and improve their overall quality of life. By choosing the identified milestones and improvement targets, Metrocare will be able to systematically monitor and evaluate the effectiveness of the treatment interventions and provide immediate changes to processes for continuous quality improvement.

Outcome Measure Valuation

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go unprovided. In regards to the ACT Project, the significant cost of the hospitalization, emergency room visits, detainment in a and placement in a State Supported Living Facility were used as comparison data against cost for the community-based ACT Project. It is estimated that participation in ACT will result in less than 5% returning to the ER or hospital, less than 5% detained in jail and less than 2% placed in a State Supported Living Center. Metrocare projects that 25% of those that participate in ACT services in DY 4 will report improved quality of life and 50% of participants in DY 5 will report improvement in quality of life.

Title of Outcome Measure (Improvement Target): IT – 10.1: Quality of Life

Unique RHP Outcome Identification Number: 137252607.3.5

Performing Provider Name/TPI: Dallas County MHMR Center dba Metrocare Services/ 137252607

Outcome Measure Description

IT – 10.1: Quality of Life

Process Milestones

- DY2:
  - P-1 Project planning – Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY4:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY5:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year

- DY4:
  - I-10.1 Quality of Life
    - Numerator: Percent improvement in Quality of Life
    - Denominator: Number of patients who participated in FPP for services for three months
    - Goal: 65% of patients who participate in FPP services for three months will report improved quality of life
    - Data Source: Child and Adolescent Needs and Strength Assessment
- DY5:
  - I-10.1 Quality of Life

- Numerator: Percent improvement in Quality of Life
- Denominator: Number of patients who participated in FPP for services for three months
- Goal: 75% of patients who participate in FPP services for three months will report improved quality of life
- Data Source: Child and Adolescent Needs and Strength Assessment

Rationale

The identified process milestones and improvement targets were selected in order to measure the successful implementation and delivery of the Family Preservation Program (FPP) program. The Process Milestones identified above are initial procedures that establish the clinics' ability to evaluate the selected Improvement Target. The goal of the program is to identify youth recently hospitalized or at-risk for permanent removal from home and to provide community based services to those youth to decrease out-of-treatment episodes by improving the youth and families overall functioning and quality of life. There are long lasting consequences to the youth, family and community at large when a child endures multiple hospitalizations or removal from home. There is also significant financial impact to the community for out-of-home treatment and reducing potential preventable admissions is a priority to our region. The Family Preservation Model is proven effective at reducing out-of-home treatment; aiding in stabilization of a youth in the home and increasing functioning and quality of life for those served by offering an intensive and comprehensive model of treatment to the client and family.

Outcome Measure Valuation

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go unprovided. In regards to the FPP Project, the significant cost of hospitalization, emergency room visits, detainment in a juvenile facility, and placement in a Residential Treatment Center were used as comparison data against cost for the community-based FPP Project. The starting point/baseline for the program is zero, with a total census of 200 kids at the end of the year three. The total census of those served will increase each year by 40 children. It is estimated that participation in FPP will result in less than 10% returning to the ER or hospital, less than 5% involved with the juvenile l justice system, and less than 2% requiring placement in a Residential Treatment Center. For those that participate in the FPP program for three months, it is estimated that 65% will report improve quality of life by conclusion of services in year 4 and 75% will report improvement in year 5.

Title of Outcome Measure (Improvement Target): IT – 9.4 Other Outcome Improvement Target – Reduce intensive school services and out-of-home treatment episode

Unique RHP Outcome Identification Number: Metrocare/137252607.3.7

Performing Provider Name/TPI: Dallas County MHMR Center dba Metrocare Services/ 137252607

Outcome Measure Description

Process Milestones

- DY2:
  - P-1 Project planning – Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY4:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY5:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year

- DY4:
  - IT-9.4: Right Care Right Setting Improvement Target: Decrease of intensive school services and out-of-home treatment episodes by 70% for those in service (source: Metrocare clinical system)
- DY5:
  - IT-9.4: Right Care Right Setting Improvement Target: Decrease of intensive school services and out-of-home treatment episodes by 80% (source: Metrocare clinical system)

Rationale

The identified process milestones and improvement targets were selected in order to measure the successful implementation and delivery of the Intensive Applied Behavior Analysis Program. The goal of the program is to lead each child to his or her potential through evidence based therapy founded on the principles of ABA. Additionally the program will provide behavioral services to increase self-reliance and improved functioning, thus decreasing the need for costly and intensive special education services. There are long lasting consequences to the youth, family, and community at large when a child with developmental disabilities does not receive the specialized therapies necessary to prepare them for their future. Children diagnosed with developmental disabilities have multiple needs and face multiple barriers. Research shows that these children often benefit from and have the best future outcomes when they receive intensive ABA training. There are limited intensive services available in Region 9 for people with developmental disabilities displaying extreme behaviors. Metrocare offers a graduated system of care for people with developmental disabilities and behavioral health issues. This project completes the continuum of care where gaps currently exist. The Intensive Applied Behavior Analysis Program will take a comprehensive, systematic approach to treating children with complex needs, providing intensive services to improve quality of life. Through the efforts of this program, there will be a reduction in the need for costly and intensive Special Education services, and a future reduction in unnecessary Emergency Department visits or placement in a State Supported Living Center. By choosing the identified milestones and improvement targets, Metrocare will be able to systematically monitor and evaluate the effectiveness of the treatment interventions and provide immediate changes to processes for continuous quality improvement.

Outcome Measure Valuation

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go unprovided. In regards to the Intensive Applied Behavior Analysis program, the significant cost of special education services, emergency room visits, and placement in a State Supported Living Facility were used as comparison data against cost for the Intensive Applied Behavior Analysis Program. The starting point/baseline for the program is zero, with a total census of 46 at the end of the first year. It is estimated that participation in ABA services will result in less than 10% requiring a higher level of support through Special Education services and less than 2% requiring placement in a State Support Living Facility.

Title of Outcome Measure (Improvement Target): IT – 10.1: Quality of Life

Unique RHP Outcome Identification Number: 137252607.3.9

Performing Provider Name/TPI: Dallas County MHMR Center dba Metrocare Services/ 137252607

Outcome Measure Description

IT – 10.1: Quality of Life

Process Milestones

- DY2:
  - P-1 Project planning – Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY4:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities
- DY5:
  - P-4 Conduct Plan DO Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year

- DY4:
  - I-10.1 Quality of Life
    - Numerator: Percent improvement in Quality of Life
    - Denominator: Number of patients who participated in BDP services
    - Goal: 25% of patients who participate in BDP services will report improve quality of life
    - Data Source: Achenbach System of Empirically Based Assessment (ASEBA)
- DY5:
  - I-10.1 Quality of Life

- Numerator: Percent improvement in Quality of Life
- Denominator: Number of patients who participated in BDP services
- Goal: 50% of patients who participate in BDP services will report improved quality of life
- Data Source: Achenbach System of Empirically Based Assessment (ASEBA)

Rationale

The identified process milestones and improvement targets were selected in order to measure the successful implementation and delivery of the BDP program. The Process Milestones identified above are initial procedures that establish the clinics' ability to evaluate the selected Improvement Target. The goal of the program is to decrease potential readmission to psychiatric facilities, jails and state supported facilities by offering an intensive package of services that will stabilize the individual in the home/ community setting, increase their life skills and coping strategies and improve their overall quality of life. By choosing the identified milestones and improvement targets, Metrocare will be able to systematically monitor and evaluate the effectiveness of the treatment interventions and provide immediate changes to processes for continuous quality improvement.

Outcome Measure Valuation

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go unprovided. In regards to the site-based Behavioral Day Program, the significant cost of the hospitalization, emergency room visits, detainment in a correctional facility, and placement in a State Supported Living Facility were used as comparison data against cost for the Behavioral Day Program. The starting point/baseline for the program is zero, with a total census of 16 at the end of the first year. The total census of those served will increase each year by 8 individuals. It is estimated that participation in BDP will result in less than 10% returning to the ER or hospital, less than 5% involved with the criminal justice system, and less than 2% requiring placement in a State Support Living Facility in the future. We project that 25% of those that participate in DY 4 will report improved quality of life and 50% of participants in DY 5 will report improvement in quality of life.

Title of Outcome Measure (Improvement Target): OD-10 Quality of Life/Functional Status

Unique RHP Outcome Identification Number: 137252607.3.12

Performing Provider name/TPI: Dallas County MHMR Center dba Metrocare Services/137252607

Outcome Measure Description:

IT 10.1 Quality of life/functional status

Process Milestones

DY 2

- P-1 Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
    - Metric: Determine timeframe to administer Quality of Life Assessment and process for analysis of data
    - Goal: Implement process for completing and analyzing Child and Adolescent Needs and Strengths Assessment (CANS) and Adult Needs and Strengths Assessment (ANSA)
    - Data Source: Manual of Operations, CANS/ANSA

DY 3

- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
    - Metric: Implement PDSA cycles that monitor the data collection and analysis process of Quality of Life Assessments (CANS/ANSA)
    - Goal: Implement changes to data collection process and clinic intervention activities as determined necessary from Quality Improvement Reports derived from the data collected through patient CANS/ANSA assessments
    - Data Source: Manual of Operations, CANS/ANSA, Quality Management Department

Outcome Improvement Targets for each year

DY 4

- IT- 10.1 Quality of Life/Functional Status
    - Numerator: Percent improvement in Quality of Life/functional status Denominator: Number of patients who were administered the survey and participated in services for, at minimum, of three consecutive months
    - Goal: 70% of patients who participate in, at minimum, three consecutive months of services, will report improved quality of life/functional status
    - Data Source: Child and Adolescent Needs and Strengths Assessment and Adult Needs and Strengths Assessment

DY 5

- IT- 10.1 Quality of Life/Functional Status
    - Metric: Demonstrate improvement in quality of life scores as measured by evidenced based and validated assessment tool (CANS/ANSA)
    - Numerator: Percent improvement in Quality of Life/functional status Denominator: Number of patients who were administered the survey and participated in services for, at minimum, of three consecutive months
    - Goal: 80% of patients who participate in, at minimum, three consecutive months of services, will report improved quality of life/functional status
    - Data Source: Child and Adolescent Needs and Strengths Assessment and Adult Needs and Strengths Assessment

Rationale:

The primary goal of this project is to expand access to behavioral health services for underserved populations. To appraise progress towards this goal, patient reported Improved Quality of Life, must be continuously evaluated using a Standardized Assessment Tool that will produce valid results. The Process Milestones identified above are initial procedures that establish the clinics' ability to evaluate the selected Improvement Target. The Child and Adolescent Needs and Strengths Assessment and the Adult Needs and Strengths Assessment were chosen as the standardized tools to measure Quality of Life as both tools have demonstrated reliability and validity and will allow Metrocare to monitor for progress towards improved quality of life throughout a client's participation in services.

Outcome Measure Valuation:

Metrocare Services determined the value of each project by comparing the budgeted cost of the specific project against the cost to the community should the services go unprovided. Costs associated with emergency room visits, hospitalization, arrest, detention and residential treatment were factors in determining the value of this project. By launching a new community based clinic in Grand Prairie, Metrocare will expand access to valuable behavioral health services and through participation in those services; clients will increase ability to improve their quality of life and functioning. It is estimated that participation in outpatient services, as defined as a minimum of three months of consecutive treatment, will result in less than 20%of those served seeking higher levels of care for psychiatric needs or involved in the criminal justice system. It is estimated that 70% of active participants (engaged in services for three consecutive months) will report improved quality of life in DY 4 and 80% will report improved quality of life in DY 5.

Title of Outcome Measure (Improvement Target): IT-1.10 - Diabetes Care: HbA1c Poor Control (>9.0%)

Unique RHP outcome identification number(s): 136360803.3.1

Performing Provider Name/TPI: Denton County Health & Human Services Department/ 136360803

Outcome Measure Description

IT-1.10 - Diabetes Care: HbA1c Poor Control (>9.0%) – NQF 0059 (Standalone Measure)

- **Numerator:** Number registry patients enrolled in Chronic Care Model management with HbA1c poor control.
- **Denominator:** Total number registry patients enrolled in Chronic Care Model management.

Process Milestones

- DY2:
  - Milestone 1: P-2: Establish Denton County Diabetes Registry and baseline rates
  - Milestone 1: P-1, P-2, P-3: Project Planning – engage stakeholders, identify current clients for registry, identify needed resources, determine timelines and document implementation plans
- DY3
  - Milestone 2: P-9: Program development - Initiate client and provider contacts to manage chronic care patients needing further clinical intervention.
  - Milestone 2: P-10: Conduct Plan Do Check Act cycles to improve data collection, client and provider contact, and intervention activities

Outcome Improvement Targets for each year

- DY4:
  - IT-1.10 - Diabetes Care: HbA1c Poor Control (>9.0%): reduce percentage of registry patients with poorly controlled HbA1c by 2.5% from baseline
- DY5:
  - IT-1.10 - Diabetes Care: HbA1c Poor Control (>9.0%): reduce percentage of registry patients with poorly controlled HbA1c by 2.5% from baseline

By the end of waiver in DY5 we will reduce the percentage of registry patients with poorly controlled HbA1c by 5% (combined Outcome Improvement Targets 1 and 2).

Rationale

HbA1c assesses the degree to which diabetics demonstrate blood sugar control. Greater than 9% is considered poorly controlled blood glucose levels. It is recognized as a leading cause of death and disability. Poorly controlled blood glucose levels may cause life-threatening and/or life-ending complications. This measure facilitates the prevention and long-term management of high blood sugar levels for patients with diabetes. Therefore, it was selected as the Category 3 Outcome measure for assessment. There are an estimated 60,000 diabetics in Denton County. Over 5,000 would clearly fall within the low income population that is the target of this project. The number is probably even larger since minority families have an even higher prevalence rate for diabetes. But a conservative estimate of the target population for this project is well over 5,000 low income individuals with diabetes. The identification of a diabetes management team to help diabetic patients grow in their ability to self-manage their condition would be a significant development in diabetes care for non-compliant patients, and a substantial means of reducing the long term costs associated with diabetes.

Outcome Measure Valuation

The economic value of each targeted improvement outcome was used to guide the overall value of the project. Additional value was considered for resource and labor investments, timelines, community benefit and need and project scope.

Denton County Health Department has proposed to implement the chronic care model as a means of improving patients' ability to manage their diabetes. In doing so, health outcomes will be improved, and at the same time the costs associated with their care will be substantially reduced. The most reliable diabetes data are from 2007, when a total cost of $174 billion was assigned to an estimated 25.8 million diabetics. (National Diabetes Fact Sheet, 2011) That computes to an average of $6,744 per diabetic. But those are 2007 dollars. The present project period begins in 2013 and goes to 2017. A more accurate cost per patient could be estimated at $10,000, based upon an ever increasing cost of medical care. But this estimate is for all US diabetics, most of whom have health insurance and adequate access to care.

The Denton County Health Department project addresses only Medicaid and uninsured diabetics. This specific group of clients has substantially less access to health care; they are notoriously non-compliant; and they frequently utilize hospital emergency departments in lieu of primary care providers. Their health care costs might be estimated at 2 or even 3 times higher than the average diabetic. If Medicaid and uninsured patients are estimated at double the average cost for the project period, then a cost of $20,000 per diabetic might be a reasonable projected cost.

Using this projection, the estimated costs of care for the 600 diabetic patients that are included in this proposal would be 600 x $20,000 which equates to $12,000,000. If use of the chronic

care model results in improved self-management, better patient compliance and improved health outcomes, a reduction in per person health care costs might be 50%. The resultant savings would amount to $6,000,000 which is $1 million more than the cost of the project. So the project might pay for itself, save an addition million in health care costs, and provide a model for care to Medicaid and uninsured diabetics that might result in far more substantial savings and improved health outcomes.

Title of Outcome Measure (Improvement Target): IT-2.10 - Flu and pneumonia Admission Rate

Unique RHP outcome identification number(s): 136360803.3.2

Performing Provider Name/TPI: Denton County Health & Human Services Department/ 136360803

Outcome Measure Description

OD-2: Potentially Preventable Admissions

- IT-2.10 Flu and Pneumonia Admission Rate
    - **Numerator:** Number admissions among low income adult clinic clients with pneumonia or flu
    - **Denominator:** Total number low income adult clients served by Denton County Health clinics.

Process Milestones

- DY2
    - Milestone 1: P-1: Project Planning – purchase vaccine, engage stakeholders, identify current clients for immunization, identify needed resources, determine timelines and document implementation plans
    - Milestone 2: P-2: Establish baseline clients needing vaccination and administer vaccines
- DY3
    - Milestone 3: P-7: Initiate client and provider contacts and participate in learning meetings and seminars.
    - Milestone 4: P-10: Conduct performance improvement activities modeled after the Plan, Do, Check, Act (PDCA) improvement cycle process and "lessons learned" models

Outcome Improvement Targets for each year

- DY4:
    - IT-2.10: Flu and Pneumonia Admission Rate: Reduce percentage of clinic clients hospitalized with pneumonia or flu by additional 2.5% from baseline.
- DY5:
    - IT-2.10: Flu and Pneumonia Admission Rate: Reduce percentage of clinic clients hospitalized with pneumonia or flu by additional 2.5% from baseline.

By the end of waiver in DY5 we will reduce clinic client admission rates for vaccine preventable pneumonia or influenza by 5% (combined Outcome Improvement Targets 1 and 2).

Rationale

Expanded use of adult immunizations can prevent disease and substantially reduce health care costs by reducing hospitalizations. The health impact of flu and pneumonia is substantial; therefore, hospital admission rates for pneumonia or influenza was selected as the Category 3 Outcome measure for assessment. Vaccines are the most effective way to prevent severe illness and complications. Every year vaccine preventable diseases in adults account for millions of dollars in health care expenditures. Between 2005 and 2010, there were 5,895 hospital admissions in Denton County for bacterial pneumonia. The cumulative cost of just these hospital admissions was over $230 million dollars. Pneumonia vaccine can prevent a large percentage of these hospitalizations which collectively cost essentially $486 for every adult in Denton County.

Outcome Measure Valuation

The economic value of each targeted improvement outcome was used to guide the overall value of the project. Additional value was considered for resource and labor investments, timelines, community benefit and need and project scope.

Denton County has proposed to improve health outcomes for Medicaid and uninsured residents by expanding adult immunizations. The rationale for the use of vaccines to reduce health care costs is perhaps the best success story in public health. The cost reduction in the treatment of smallpox is quite dramatic. Similarly, health care expenditures for polio have been all but eliminated as a direct result of the use of vaccines. DCHD outcomes for influenza and bacterial pneumonia immunization may not be quite as spectacular, but they are predictable and substantial.

Texas Department of State Health Services documents confirm 5,895 hospitalizations from 2005 to 2010 for bacterial pneumonia. The total hospital charges that resulted from these admissions was $233,417,472, an average of $39,596 per hospitalization. The DCHD proposal includes the vaccination of 1500 Medicaid recipients and uninsured residents for bacterial pneumonia. If these immunizations result in the prevention of 100 hospitalizations, the associated savings would be $3,959,600.

Similarly, influenza hospitalization costs would also reduced. Although influenza costs for hospitalization are not as great, there are more of them. A conservative cost estimate is $10,000 per influenza admission. Consequently, if the provision of 1500 doses of vaccine were to result in 100 fewer hospitalizations, the resultant savings would be about $1,000,000. Keep

in mind the 1500 vaccinations would mean 1500 fewer individuals to spread influenza to other susceptibles, so 100 fewer hospitalizations is not a stretch.

These are only the hospitalization costs and do not take into consideration the costs related to health care providers, labs, pharmacy, etc. Furthermore, this is only two of the proposed 10 vaccines. These two vaccines alone could result in hospitalization savings of 4.9 million. Additional savings realized from pertussis, hepatitis A, hepatitis B, Zoster, and the other vaccines would surely result in savings of at least $1,000,000. That would bring the hospitalization savings to 5.9 million and another million could be anticipated in provider, laboratory, and pharmacy savings. So the total estimated savings would exceed 6.9 million from a program that costs only 5 million. Given the documented cost effectiveness of vaccine programs, this initiative to improve adult immunizations among Medicaid recipients and the uninsured is clearly cost effective.

Title of Outcome Measure (Improvement Target): IT-9.2: ED Appropriate Utilization

Unique RHP Outcomes Identification Number: 135234606.3.1

Performing Provider Name/TPI: Denton County MHMR Center/135234606

Outcome Measure Description

OD-9: Right Care, Right Setting

- IT-9.2: ED Appropriate Utilization (Stand-alone Measure)

Establish a 24 hour psychiatric triage facility to increase the capacity to provide psychiatric services, to better accommodate the high demand for triage services, and to reduce inappropriate emergency room usage. The project goals include the development of a 24 hour psychiatric triage facility that will link individuals in need of psychiatric services with appropriate care. The community need for this project is due to: lack of funding, lack of a public hospital, lack of voluntary and involuntary beds at state mental health facilities, lack of additional community resources to promote preventative behavioral health services. The county lacks community resources for behavioral health care assessment/services for indigent individuals outside of the Local Mental Health Authority. The United Way of Denton County, Inc. identified health needs and mental health services for depression as top findings in the assessment [CN.5]. The lack of health care access is attributed to a lack of insurance (2011: 17.2% adults and 10.6% children in Denton County, [CN.5]. The starting point for expansion and enhancement of behavioral health service availability is by developing 24 hour psychiatric triage services. Services include assessment, medication management and referral as indicated, to a higher level of care. The four year expected outcome of the project is to provide expanded behavioral health triage services through a centralized location, thus reducing potentially preventable admissions/readmissions to area hospitals and emergency rooms.

Rationale

The rationale for the project is in the value of reducing ED admit/readmit rates and prevention of unnecessary ED, acute care, and criminal justice use [6]. This initiative will also enhance the opportunity for additional jail diversion [6, CN.7]. When individuals that have a mental health diagnosis receive treatment and are able to return to work the value to the community is increased by wages and taxable income [8, 4, 10]. Individuals that have a mental health diagnosis earn $16,000 less annually than their non-diagnosed counterpart. This costs employers in the United States and other countries, including Australia, billions in dollars in lost revenue generation, and loss of labor force. Millions of dollars are also lost in income tax revenue. The Texas economy loses $5 billion annually due to mental illness mostly through loss of worker production [6, 11, 9, 13]. Effective community triage, referrals, and community treatment can reduce emergency room admission and readmission, acute care, as well as

decrease lost revenue and increase expenditure on avoidable incarceration. The cost of care for a person that has a mental illness is as follows, incarceration $137 per day, ER $1265 per visit, state mental health hospital $400 per day; verses community cost of care for a person that has a mental illness: $12.00 per day. Appropriate triage can prevent incarceration, ER visits, acute care utilizations, and state hospital admits by appropriate referrals to the community mental health system [5]. Moreover, in an Integrated Care Collaboration model study, it was noted that nine frequent ER users over six years cost three million dollars to treat, and seven of those nine had a mental illness [1, 2, 3, 4, 7, 12].

Outcome Measure Valuation

The value of the project will be measured by amount of individuals served in the psych triage facility being provided the right care in the right setting. The value for the project is reducing Emergency Department (ED) admit/readmit rates and prevention of unnecessary ED, acute care, and criminal justice use [6]. This initiative will also enhance the opportunity for additional jail diversion [6]. When individuals that have a mental health diagnosis receive treatment and are able to return to work the value to the community is increased by wages and taxable income [8, 4, 10]. Individuals that have a mental health diagnosis earn $16,000 less annually than their non-diagnosed counterpart This costs employers in the United States and other countries, including Australia, billions of dollars in lost revenue generation, and loss of labor force. Millions of dollars are also lost in income tax revenue. The Texas economy loses $5 billion annually due to mental illness mostly through loss of worker production [6, 11, 9, 13]. Effective community triage, referrals, and community treatment can reduce emergency room admission and readmission, acute care, as well as decreasing lost revenue and increased expenditure on avoidable incarceration. The cost of care for a person that has a mental illness is as follows: Incarceration $137 per day, ER $1265 per visit, state mental health hospital $400 per day, and community cost of care for a person that has a mental illness is $12 per day. Appropriate triage can prevent incarceration, ER visits, acute care utilizations, and state hospital admits by appropriate referrals to the community mental health system [5]. Moreover, in an Integrated Care Collaboration model, it was noted that nine frequent ER users over six years cost three million dollars to treat and seven of those nine had a mental illness [1, 2, 3, 4, 7, 12]. In addition, through econometrics, we value the impact of this project to the community at $30,000,000 although Denton County MHMR Center is requesting a much smaller DSRIP valuation/incentive payment for this project.

Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction

Unique RHP Outcomes Identification Number: 135234606.3.2

Performing Provider Name/TPI: Denton County MHMR Center/135234606

Outcome Measure Description

OD-6: Patient Satisfaction

- IT-6.1: Percent improvement over baseline of patient satisfaction scores

Patient satisfaction through integrating behavioral and primary health will reduce inappropriate ED usage for those clients with co-morbid diseases. Design, implement, and evaluate projects that provide integrated primary and behavioral health care services. The goal for the project includes the integration of care management functions for individuals with co-morbid chronic diseases, mental illness, and/or substance use disorders, by collaborative partnership agreements for delivery of primary and behavioral health care management. The challenges and issues of the performing provider include; limited funding opportunities for expansion, extensive waitlist of behavioral health services, currently over-serving Department of State Health Services (DSHS) funding capacity to fulfill the needs for behavioral health services (Adults 113%, children and adolescents 197%), and lack of community resources for provision of primary care and co-morbid chronic diseases. The implementation of this project will reduce the extensive wait list for Denton County MHMR Center (over 300 clients as of October 2012), provide access health care for uninsured and underinsured clients, and reduce ED costs by providing improved access. In addition, Denton County does not have a public acute-care safety net hospital. According to 2011 census, Denton County has a poverty level of 8.9%. According to 2011 United Way of Denton County, Inc. needs assessment, 17.2% of adults and 10.6% of children in Denton County are uninsured [CN.5].

Rationale

The rationale for the project is the value to the community, public health system, criminal justice system, and hospitals by reducing inappropriate emergency room admissions, readmissions, and inappropriate use of the criminal justice system. The project will address core components A, B, C, D, E, F, G, H, I, and J of 2.15.1 of the RHP planning protocol. If integrated and primary behavioral health care access is not available, the indigent population is often forced to turn to expensive sites of care such as EDs and urgent care. The United Way of Denton County, Inc. Needs Assessment further identified affordable and accessible health care and preventative health care as needs in Denton County [CN.6]. Various research has shown that integrated health care can save billions yearly, by avoiding emergency room visits and incarceration. An example of cost savings is using community based care at the average of $12 a day, compared with the cost of $1265 for a limited emergency room visit. According to the

National Association of Community Mental Health Centers Inc. as cited in article [6], 35% of emergency room visits are avoidable if access to primary care exists, leading to savings of $18 billion per year. This study cites Texas as one of four states that spends over 1 billion annually on ED visits [6]. A different example of the cost effectiveness of integrated health care includes a pilot integrated health care system in Colorado, where a $2040 savings per year per patient occurred. A total of 200 served over five years equaled $408,000 saved over regular care [3]. In a project report, it is listed that the effect of an integrated intervention is equivalent to an increase of 0.338 quality-adjusted life-years [2]. Twenty individuals served x 0.338 x $50,000 (life year value) = $338,000 savings. Collaborative care models have shown savings of $1.7 for every dollar invested. Integrated primary and behavioral health care has shown to improve the quality of care, cost effectiveness, and decreases the disparities in health care [1, 3, 6, 7, 8, 9, 10, 11]. In addition, through econometrics, we value the impact of this project to the community at $15,000,000, although Denton County MHMR Center is requesting a much smaller DSRIP valuation/incentive payment for this project.

Outcome Measure Valuation

The value of the project will be measured by the number of individuals served in the integrated health clinic. The value of the project is reducing ED admit/readmit rates and prevention of unnecessary ED, acute care, and criminal justice use [6]. The value for the project to the community, public health system, criminal justice system, and hospitals is reducing inappropriate emergency room admissions, readmissions, and inappropriate use of the criminal justice system. If integrated and primary behavioral health care access is not available, the indigent population is often forced to turn to expensive sites of care such as EDs and urgent care. Various research shows that integrated health care can save billions yearly by avoiding emergency room visits and incarceration. The cost of care for a person that has a mental illness is as follows: incarceration $137 per day, ER $1265 per visit, state mental health hospital $400 per day, and community cost of care for a person that has a mental illness is $12 per day. According to the National Association of Community Mental Health Centers Inc. as cited in article [6], 35% of emergency room visits are avoidable if access to primary care exists, leading to savings of $18 billion per year. This study cites Texas as 1 of 4 states that spends over 1 billion annually [6]. A different example of the cost effectiveness of integrated health care includes a pilot integrated health care system in Colorado, where a $2040 saving per year per patient occurred. A total of 200 served over 5 years equal $408,000 saved over regular care [3]. In a project report [2], it is listed that the effect of an integrated intervention is equivalent to an increase of 0.338 quality-adjusted life-years. Twenty individuals served x 0.338 x $50,000 (life year value) = $338,000 savings. Collaborative care models have shown savings of $1.7 dollars for every dollar invested. Integrated primary and behavioral health care has shown to improve the quality of care, cost effectiveness, and decreases the disparities in health care [1, 3, 4, 6, 7, 8, 9, 10, 11, 12].

In addition, through econometrics, we value the impact of this project to the community at $15,000,000, although Denton County MHMR is requesting a much smaller DSRIP valuation/incentive payment for this project.

Title of Outcome Measure (Improvement Targets): IT-6.1: Patient Satisfaction

Unique RHP Outcome Identification Number: 135234606.3.3

Performing Provider Name/TPI: Denton County MHMR Center/135234606

Outcome Measure Description

OD6: Patient Satisfaction

Patient Satisfaction through providing specialty services to individuals in Denton County through a crisis residential care program. Establish crisis residential program to provide an intervention for a target behavioral health population to prevent unnecessary use of services in a specified setting. Increase the capacity to provide crisis residential services to better accommodate the high demand for crisis residential services and reduce potentially preventable admissions and readmissions. The goal for this project is to reduce the demand for inappropriate admissions (i.e., the criminal justice system, ER, urgent care) and assist the individual in maintaining residence in the community. The community need for the project is due to readmissions for inpatient care. The challenges and issues of the performing provider include: funding for project, lack of community resources for crisis residential services, and the lack of a public acute-care safety net hospital in Denton County. According to the 2011 United Way Survey, emergency transitional housing and shelter needs have continued to rise in Denton County [CN.5]. The Section 8 Denton Housing Authority (DHA) list closed in June of 2011. The DHA currently has a waitlist of 2,700 individuals; the estimated wait for assistance is four years. The starting point would be the development of a crisis residential home with a capacity of 8 individuals with additional beds for additional needs, such as individuals with substance abuse disorders, transition from criminal justice system, and transition from a higher level of need. The four year expected outcome of the project is to provide short-term community based residential crisis treatment for individuals in Denton County.

Rationale

The rationale for this project is to improve outcomes and promote access to quality behavioral health care services on a regular basis. The project has been identified as a need in Denton County in the United Way Needs Assessment Survey [10,CN.5]. Emergency shelter and transitional housing have been included in the top four needs in the income section of this community needs assessment [10, 11, CN.5]. Individuals that have a mental health diagnosis and are in need of housing services often turn to the emergency rooms as first line treatment for their mental illness and housing needs. This treatment center will provide emergency and transitional housing and shelter using the Department of State Health Services crisis residential staffing guidelines. Qualified mental health professionals will be available. The combination of these services will reduce behavioral and medical emergency room admission and readmission, as well as decrease lost revenue and increase expenditure on avoidable incarceration. Acute

treatment costs were 44% lower in a crisis residential program ($3046 per episode) as compared to hospitalization ($5,549 per episode) and the typical cost for homeless persons is $2,897 per month [1]. The typical cost of housing for residents in supportive housing is $605 per month. This is a savings of $2,292 per month for one individual [2, 3, 4, 5, 6, 7, 8, 9]. In addition, through econometrics, we value the impact of this project to the community at $15,000,000, although Denton County MHMR is requesting a much smaller DSRIP valuation/incentive payment for this project.

Outcome Measure Valuation

Patient satisfaction will be determined by assessment of several areas including**:** the value for the project to the community, public health system, criminal justice system, and hospitals by reducing inappropriate emergency room admissions, readmissions, and inappropriate use of the criminal justice system. If integrated and primary behavioral health care access is not available, the indigent population is often forced to turn to expensive sites of care such as EDs and urgent care. Research shows that integrated health care can save billions yearly, by avoiding emergency room visits and incarceration. The cost of care for a person that has a mental illness is as follows: Incarceration $137 per day, ER $1265 per visit, state mental health hospital $400 per day, and community cost of care for a person that has a mental illness: $12.00 per day. According to the National Association of Community Mental Health Centers Inc. as cited in article [6], 35% of emergency room visits are avoidable if access to primary care exists, leading to savings of 18 billion dollars a year. This study cites Texas as one of four states that spends over 1 billion annually [6]. A different example of the cost effectiveness of integrated health care includes a pilot integrated health care system in Colorado, where a $2040 savings per year per patient occurred. A total of 200 served over five years equaled $408,000 saved over regular care [3]. Title of Outcome Measure (Improvement Target): IT-4.8 Sepsis mortality

Unique RHP outcome identification number(s): 111905902.3.1

Performing Provider Name/TPI: Denton Regional Medical Center/111905902

Outcome Measure Description

IT-4.8 Sepsis mortality is the percentage of those patients diagnosed with sepsis, severe sepsis or septic shock and/or an infection and organ dysfunction that expire during hospitalization. Mortality rates are very high in US from sepsis. With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management Bundles we will decrease the mortality rate. We expect to diagnose and treat 530 sepsis patients (estimated at DY 1- 55, DY2-83, DY 3- 103, DY 4- 129, DY 5-160).

Process Milestones

In DY 2 we will establish baseline rates for sepsis mortality to measure for improvement targets. In DY2 and 3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
It is expected that the morality rate for this population in DY 2 will initially increase compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure same mortality rates based on same standards of care.

Outcome Improvement Targets

By DY 4 and DY5, the improvement target is Sepsis mortality reduction of 25% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for sepsis mortality as defined by protocl in order to measure improvement in DY 4 and DY 5.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

According to the Center for Disease Control and Prevention (CDC) 2007 statistics, septicemia is the 10th leading cause of death in the United States. The outcome target for mortality was selected as evidence based initiatives put in place can reduce mortality. In order to measure the effectiveness of sepsis initiatives mortality rate reduction will be measured.. Each year mortality from severe sepsis and septic shock nationally have consistently been reported to be over 20-25% for severe sepsis and as high as 70% for septic shock.

Outcome Measure Valuation

The economic value of each targeted improvement outcome from evidence based studies was used a guide for the overall value of project. Additional value was considered for resource investments needed, timelines, cost avoidance, community benefit and risk and project scope.

Denton Regional Medical Center defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 531 which was determined based on outcome target for reduction in mortality by 25% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 25. The estimated pricing for morality of $10,000 per life was used. This reflected such considerations a costs for care, lost wages , and quality of life. This totaled approximately $258,375 for 5 years.
The total sepsis population is expected to be positively impacted by the project for a reduction in length of stay of 2 days from baseline average of 10 days per patient. This was estimated at total of reduced in patient days by DY 5 of 704. The estimated current ALOS is based on coded claims and not entire population that will be diagnosed and treated in the future as this in the only information available at the time of project. But reasonableness estimates this is within target of sample cases in baseline year. The estimated cost per day for a sepsis patient is $1,049. This totaled approximately $739,230.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for mortality is a 5. We believe this to be the correct number because when a person is positively impacted, mortality will decrease, reducing costs and resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced mortality was $258,375.
To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for reduced length stay is a 1. We believe this to be the correct number because when length of stay is reduced, there is less risk for complications resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced length of stay is $110,885.

To determine the value to the community of each individual positively impacted by reduced mortality, we concluded that, on a scale of 1 to 5, the value of this project is a 5. We believe this

to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of mortality reduction at $258,375.
To determine the value to the community of each individual positively impacted by reduced length of stay, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of length of stay reduction at $107,551.

The total value of the project then was estimated at $1,732,791. Approximately 79% of the total value was assigned to Category 2 project ($1,370,117) and the remaining 10.46% of value assigned to Category 3 outcome for Sepsis Mortality ($181,338) and 10.46% assigned to Category 3 outcome for reduced Average Length of Stay ($181,336).

Title of Outcome Measure (Improvement Target): IT-4.9 Average length of stay

Unique RHP outcome identification number(s): 111905902.3.2

Performing Provider Name /TPI: Denton Regional Medical Center/111905902

Outcome Measure Description

IT- 4.9: Average length of stay is the number days a patient is hospitalized when diagnosed with severe sepsis, septic shock, and/or lactate>4mmol/L (36mg/dl). With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management of care, average length stay should decrease as result. We expect to diagnose and treat 530 sepsis patients (estimated at DY 1- 55, DY2-83, DY 3- 103, DY 4- 129, DY 5-160).

Process Milestones

In DY 2 we will establish baseline rates for sepsis average length of stay to measure for improvement targets. IN DY2 and 3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
It is expected that the average length of stay for this population in DY 2 will initially be different compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure length of stay based on same standards of care.

Outcome Improvement Targets

By DY 4 and DY5, the improvement target is Sepsis average length of stay of 20% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for the average length of stay for patient receiving Sepsis Resuscitation Management Bundle Care in order to measure improvement in DY 4 and DY 5. Typically average length of stay for ICU has been measure but not for the entire hospitalization.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

The outcome improvement target to reduce length of stay was selected to measure the effectiveness of evidence based care initiatives for sepsis diagnosis and treatment. Average length of stay reduction can also show advancement of sepsis care that is effective through the continuum of the hospital not just in critical care units and comprehensive, coordinated discharge planning.

Outcome Measure Valuation

The economic value of each targeted improvement outcome from evidence based studies was used a guide for the overall value of project. Additional value was considered for resource investments needed, timelines, cost avoidance, community benefit and risk and project scope of the project.

Denton Regional Medical Center defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 531 which was determined based on outcome target for reduction in mortality by 25% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 25. The estimated pricing for morality of $10,000 per life was used. This reflected such considerations a costs for care, lost wages , and quality of life. This totaled approximately $258,375 for 5 years.
The total sepsis population is expected to be positively impacted by the project for a reduction in length of stay of 2 days from baseline average of 10 days per patient. This was estimated at total of reduced in patient days by DY 5 of 704. The estimated cost per day for a sepsis patient is $1,049. This totaled approximately $739,230.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for mortality is a 5. We believe this to be the correct number because when a person is positively impacted, mortality will decrease, reducing costs and resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced mortality was $258,375.
To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for reduced length stay is a 1. We believe this to be the correct number because when length of stay is reduced, there is less risk for complications resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced length of stay is $110,885.

To determine the value to the community of each individual positively impacted by reduced mortality, we concluded that, on a scale of 1 to 5, the value of this project is a 5. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of mortality reduction at $258,375.

To determine the value to the community of each individual positively impacted by reduced length of stay, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of length of stay reduction at $107,551.

The total value of the project then was estimated at $1,732,791. Approximately 79% of the total value was assigned to Category 2 project ($1,370,117)and the remaining 10.46% of value assigned to Category 3 outcome for Sepsis Mortality ($181,338) and 10.46% assigned to Category 3 outcome for reduced Average Length of Stay ($181,336).

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD *(add outcome amounts over DYs 2-5):* $181,336			

Title of Outcome Measure (Improvement Target): IT-6.1 Percent Improvement over baseline of patient satisfaction scores

Unique RHP outcome identification number(s):111905902.3.3

Performing Provider Name/TPI: Denton Regional Medical Center/111905902

Outcome Measure Description:

IT-6.1 Percent Improvement over baseline of patient satisfaction scores. At the end of the 5 year waiver, scores will be improved by 20%. Approximately 33% of our patients are either Medicaid eligible or indigent. We estimate 10,200 patients a year or 54,000 over the course of the waiver will be impacted. We do actively survey 100 patients a month/1200 a year

Process Milestone:
DY 2 we will establish baseline data to measure for patient satisfaction scores. In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate in order to correctly measure the improvement target. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.

Outcome Improvement targets for each year:
The target for the outcome measure is 10% improvement in scores over baseline in DY 4 and 20% in DY 5 over baseline.

Rationale:
. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders (IP /OP, out of hospital providers, etc) are identified and included in the plan. Indentifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan are a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to develop and test data systems to find measurement tool for improvement work on patient experience targets that are real-time .. The process milestone to

is necessary due to timing delays of other survey results and need for direct feedback to specific interventions for patient experience that will be implemented.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The target for the outcome measure is to increase patient satisfaction scores by 20% by the end of the waiver period. An increase in patient satisfaction scores will be utilized as a measurement of the effectiveness of improvement work on targeted patient experiences.

Outcome Measure Valuation:

Denton Regional Medical Center defined the population that will be directly impacted by the project as patients with Medicare and all patients who are the target of HCAHPS survey. The percentage of the population expected to be positively impacted by the project is all patients surveyed, which was determined based on studies of similar projects implemented elsewhere. We used the pricing matrix developed to determine the value to the health care system for each positive outcome realized as the result of our project. It was estimated based on CMS published penalties that in 5 years for not achieving satisfactory patient experience levels, 1.5% of Medicare revenues were in jeopardy. The Medicare average volume per year of 4,500 cases and rate per Medicare case of $8,827 was used to calculate the estimated loss of revenues using these penalty % for DY 2- 0.50%, DY 3- 0.75%, DY 4-0.94%, and DY5 -1.5% . This totaled $1,748,045 for a 5 year period.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, patient experience improves, which results from improved safety and quality of care that better health outcomes and reduced costs. This was estimated a portion of potential revenue value and totaled $349,609. To determine the value to the community of each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, his or quality of life is improved, productivity is increased, and there is a reduced burden on society. This was estimated a portion of potential revenue value and totaled $ 348,443.

The total value of the project was calculated at $2,446,907. Approximately 79% of the project value was assigned to the Category 2 project, $1,934,127 and 21% to the Category 3 project, $511,970.

Title of Outcome Measure (Improvement Target): IT-12.2 Cervical Cancer Screening (HEDIS 2012)

Unique RHP outcome identifier: 094194002.3.1

Performing Provider Name/TPI: Doctors Hospital at White Rock Lake/094194002

Outcome Description

IT-12.2 Cervical Cancer Screening (HEDIS 2012) (Non-standalone Measure)

Through improved access to primary care and expanded women's services and education, this project will increase the number of women aged 21 to 64 that have received a PAP in the measurement year or two prior years, first establishing a baseline.

Rationale:

As a result of increasing access to a medical home, patients that are high-risk or with chronic disease are more likely to receive appropriate follow-up care and preventative care. Through increased access to these primary care services, patients that would have been otherwise unable to seek basic primary care will receive increased screenings and potentially avoid serious medical complications that result from infrequent care. Early interventions resulting from screenings are a life-changing benefit for the patient, and will ultimately result in a cost-savings to the healthcare delivery system.

Process Milestones:

DY2:

- Milestone P1: Project Planning – engage stakeholders through combining education and nurse/clinical resources, identify current capacity and needed resources, determine timelines and document implementations plans.

DY3:

- Milestone P2: Establish baseline rates - determine how many women, aged 21 through 64, who have named the clinic as their home physician's office receive a cervical cancer screening.

Outcome Improvement Targets for Each Year:

DY4:

- Milestone P3: Increase the number of women by [TBD] over DY3 baseline rate.

DY5:

- Milestone P5: Increase the number of women by [TBD] over DY3 baseline rate.

Outcome Valuation:

The project's value is found most directly through its enhancement of Mission East Dallas' women's health programs, including cervical cancer screening. The project supports physicians, nurses, Medicaid enrollment specialists, prescription management and support, Information Technology support, and other administrative support. This project enhances services that are scheduled to be lost through Project Access Dallas, including coordination, referrals, supplemental clinical/physician support, and transportation. This project relates to the value of Project 094194002.2.1, which was developed using the RHP 9 scoring criteria guidance and criteria:

- Meets Waiver Goals
- Addresses Community Needs
- Project Scope
- Project Investment
- Value Weight of the Project

Further valuation was determined using the Community Needs Assessment for the region and through researching numerous preventive care materials.

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes care: HbA1c poor control (>9.0%) – NQF 0059

Unique RHP outcome identifier: 094194002.3.2

Performing Provider Name/TPI: Doctors Hospital at White Rock Lake/094194002

Outcome Description

IT-1.10 Diabetes care: HbA1c poor control (>9.0%) – NQF 0059 (Stand-alone Measure)

Through engagement, education, and identification, this project will increase diabetes education, establish a baseline, provide testing to an increased number of indigent care patients, and ultimately produce an outcome of improvements in the percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c (HbA1c) control >9.0%.

Data Source: EHR, Registry, Claims, Administrative Clinical Data

Rationale:

As a result of increasing access to a medical home, patients that are high-risk or with chronic disease, such as diabetes, are more likely to receive appropriate follow-up care and proper disease management. Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Diabetes control can improve the quality of life for millions of Americans and lower costs to the healthcare system. Patients that are assigned to a medical home will have access to the healthcare and resources they need to effectively manage their disease.

Process Milestones:

DY2:

- Milestone P1: Project Planning – engage stakeholders through combining education and nurse/clinical resources, identify current capacity and needed resources, determine timelines and document implementation plans.

DY3:

- Milestone P2: Establish baseline rates. Clinic personnel will keep a record of the number of patients within this diabetic category to establish a baseline rate for improvement in DY4 and DY5.

Outcome Improvement Targets for Each Year:

DY4:

- Decrease the number of patients with diabetes who had hemoglobin A1c (HbA1c) control >9.0% by [TBD] over DY3 baseline.

DY5:

- Decrease the number of patients with diabetes who had hemoglobin A1c (HbA1c) control >9.0% by [TBD] over DY3 baseline.

Outcome Valuation:

Doctors Hospital at White Rock Lake will work with Mission East Dallas to increase diabetes education, treatment, and care. The project supports physicians, nurses, Medicaid enrollment specialists, prescription management and support, Information Technology support, and other administrative support in accomplishing metrics and milestones. This project enhances services that are scheduled to be lost through Project Access Dallas, including coordination, referrals, supplemental clinical/physician support, and transportation.

This project relates to the value of 094194002.2.1, which was developed using the RHP 9 scoring criteria guidance and criteria:

- Meets Waiver Goals
- Addresses Community Needs
- Project Scope

DY5:

- Decrease the number of patients with diabetes who had hemoglobin A1c (HbA1c) control >9.0% by [TBD] over DY3 baseline.

Rationale for Process Milestones and Improvement Targets: Process Milestones to conduct Project Planning in DY2 and Establish Baseline rates in DY3 were chosen to appropriately plan for and implement a strategy for reducing HbA1c poor control. In DY4 and DY5, Doctors Hospital at White Rock Lake plans to reduce rates over the DY3 baseline by [TBD] in DY4 and by [TBD] in DY5.

Outcome Valuation

In concert with its Category 2.12 Care Transitions Programs project, Doctors Hospital at White Rock Lake will utilize this project to increase diabetes education, treatment, and care with low-income patients it serves. This project relates to the value of Project 094194002.2.2 which was developed using the RHP 9 scoring criteria guidance and criteria:

- Meets Waiver Goals
- Addresses Community Needs
- Project Scope
- Project Investment
- Value Weight of the Project

Further valuation was determined using the Community Needs Assessment for the region, researching cost of PPRs, PPCs, ED utilization, and other costs presented by untreated, undertreated, and under-informed diabetic populations, and through researching numerous preventive care materials.

Title of Outcome Measure (Improvement Target): 3.IT-6.1 Patient Satisfaction: Percent improvement over baseline of patient satisfaction scores measuring patient's overall health status/functional status. (3.IT-6.1)

Unique RHP outcome identification number(s): 121988304.3.1

Performing Provider Name/TPI: Lakes Regional MHMR Center / 121988304

Outcome Measure Description:
The project will implement outcome measure IT-6.1 to measure improvement over baseline of patient satisfaction scores regarding patient's overall health status/functional status.

Process Milestones:

- In DY3, we will establish the baseline rate for patient satisfaction with overall health status/functional status in 30 individuals.

Outcome Improvement Targets for each year:

- In DY4, Improvement Target-6.1 is to achieve 20% improvement over baseline of patient satisfaction scores measuring patient's overall health status/functional status in at least 100 individuals. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

- In DY5, Improvement Target-6.1 is to achieve 40% improvement over satisfaction scores in DY4 measuring patient's overall health status/functional status in at least 150 individuals by end of Waiver. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

By the end of the Waiver, our goal is to achieve 60% improvement over baseline of patient satisfaction scores regarding satisfaction with patient's overall health status/functional status.

Rationale:
Research has shown that there is a much greater instance of health problems in the IDD population[526]. The program staff will monitor mental and physical health status and outcomes to facilitate integrated care, improvement of patient satisfaction and outcomes for the target

[526] Jansen, D., Krol, B., Groothoff, J. and Post, D. (2004). People with intellectual disabilities and their health problems: a review of comparative studies. *Journal of Intellectual Disability Research* 48 (2): 93-102.

population[527]. Research has shown that the use of Intensive Case Management reduced the number, confidence interval and duration of inpatient admissions, reducing the number of reported needs and increasing patient satisfaction, as well as the cost of care borne by the health sector[528]. The CGCAHPS survey produces ". . . comparable data on the patient's perspective on care that allows objective and meaningful comparisons between institutions on domains that are important to consumers"[529]. Sharing survey results with other agencies and providers in the Region regarding consumer satisfaction with overall health and functional status will bring about improvements in the overall health system for individuals with IDD/ASD/MH, since "[p]ublic reporting of the survey results is designed to create incentives for institutions to improve their quality of care." [530] Sharing survey results with stakeholders will result in a greater awareness of the efficacy of the crisis respite wraparound model in improving life satisfaction, following better self-management skills and improved follow-up to care.

Lakes Regional has the data to evaluate patient satisfaction with overall health status/functional status at this time. We will establish a baseline rate to measure satisfaction by implementing the CG-CAHPS and administering it to at least 30 individuals. The CG-CAHPS is a standardized survey instrument and data collection methodology for measuring patients' perspectives on health care. Working collaboratively with the target population to highlight the importance of implementing evidence-based approaches to care tailored to individual needs will involve the target population in being accountable for participation in consistent self-monitoring. Better control over physical and psychiatric symptoms has shown to lead to greater consumer and family member satisfaction, as noted above.

Additionally, Lakes Regional will collaborate with 39 other MHMR centers across the state to select a small set of outcome measures for Category 3, based on the valuation studies conducted by health care economists at the University of Texas and University of Houston. The collaborative will develop a strategy for collection of data through shared data sources in local communities. Centers are currently in the process of engaging a consultant to provide leadership and consultation for the project.

Outcome Measure Valuation:

The valuation for this project was based on an established economic evaluation model and extensive literature review conducted by professionals in the field and at the University of Houston School of Public Health and University of Texas at Austin Center for Social Work Research.

---

[527] Jansen, D., Krol, B., Groothoof, J. and Post D. (2006). Towards improving medical care for people with intellectual disability living in the community: possibilities of integrated care. *Journal of Applied Research in Intellectual Disabilities.* 19: 214-218.

[528] Hassiotis. A. (2002). Community mental health services for individuals with intellectual disabilities: issues and approaches to optimizing outcomes. *Disability Management and Health Outcomes* 10 (7): 409-417.

[529] RHP Planning Protocol, Category 3 Quality Improvements, 398.

[530] ibid

Outcome measures will be valued by assessing community needs identified for Region 9 addressed through the RHP plan, such as the need for more care coordination and overuse of emergency department services. When patients experience a fragmented service system between behavioral health and primary care, as well as a lack of access to coordinated care, they experience lack of satisfaction and inability to self-monitor and manage symptoms effectively as a result. Supporting individuals in the community at a lesser cost than hospital or institutional care, and avoiding costs in emergency departments and psychiatric hospitals is a predictor to overall improvement in coordinated care in the community, and greater quality of life satisfaction. [531]

DY2 – There is no process milestone in DY2; the focus of Quality Improvement will be on activities in DY2 in the related project (1.13.1) involving gathering input from stakeholder meetings, conducting mapping and gap analyses regarding Community Need in the project area, and defining project requirements. (Outcome valuation payment/process milestone are not required in DY2 for this project.)
DY3 – Process Milestone (P-2) to establish the baseline rate for improvement in patient satisfaction with overall health/functional status in 30 individuals. The need to measure improvement in this domain will be accomplished by hiring part-time Quality Assurance staff to survey the target population to achieve a baseline for outcome measure 3IT-6.1. Participants will be surveyed to assess their experience in the current service system as it relates to meeting their needs.
DY4 – Improvement Target 6.1 is to establish 20% improvement over baseline of patient satisfaction scores in at least 100 individuals in the selected domain. Nursing staff will administer surveys to measure improvement over baseline in the selected domain. It is expected that service recipients will experience improved overall satisfaction with services due to improved quality of life; improved satisfaction is expected to lead to a decrease in overuse of emergency department services and other barriers to access to care in the community for the target population, as well as improved ability to successfully and consistently self-manage symptoms in the community.
DY5 – Improvement Target 6.1 to establish 40% improvement over DY4 in at least150 individuals and 60% improvement overall in patient satisfaction scores in selected domain: see approach/methodology for IT-6.1 for DY4.

3IT-6.1 Percent improvement over baseline of patient satisfaction scores. A process milestone in Year 3 will establish the baseline rate for improvement in patient satisfaction with overall health/functional status; Improvement targets in DYs 4 and 5 will establish percent improvement over baseline in patient satisfaction scores in at least 250 individuals, ending Year 5 with a 60% improvement over baseline in patient satisfaction scores.

[531] Jansen, D., Krol, B., Groothoof, J. and Post D. (2006). Towards improving medical care for people with intellectual disability living in the community: possibilities of integrated care. *Journal of Applied Research in Intellectual Disabilities.* 19: 214-218.

Size – The project will involve hiring one nursing staff and one part-time Quality Assurance staff to administer surveys, provide monitoring and follow-up and documentation of responses, and collection and maintenance of data on potentially and approximately 250 respondents receiving care at the Crisis Respite/Wraparound program.

Project Scope – The proposed project is projected to measure satisfaction with improvement in overall health status/functional status in approximately 250 individuals (children and adults) who are dually diagnosed in Ellis and Navarro counties.

Population Served – The population targeted to be served are individuals dually diagnosed with IDD/ASD/MH (one or all of those diagnoses).

Community Benefit and Cost Avoidance – As noted above, improved satisfaction with overall health outcomes will lead to improved self-maintenance of physical and psychiatric health outcomes, as well as less frequent need for hospital visits and stays that result from crisis/exacerbation of symptoms. Consistently implementing monitoring and follow-up in the approach to care will lead to cost avoidance in that patients will no longer require the support of more expensive settings for symptom maintenance. Research has shown that the use of Intensive Case Management reduced the number, confidence interval and duration of inpatient admissions, reducing the number of reported needs and increasing patient satisfaction, as well as the cost of care borne by the health sector. [532] Sharing evidence-based data with other providers on patient satisfaction in this area will serve to "enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment" [533]

Addressing Priority Community Need – Currently there is no crisis respite/wraparound program in the targeted area to serve the needs of the target population when in crisis, resulting in the frequent use of more restrictive and expensive settings for care, such as psychiatric hospitals and institutional settings.

Estimated Local Funding – (see table)

Title of Outcome Measure (Improvement Target): 3.IT-6.1 Patient Satisfaction: Percent improvement over baseline of patient satisfaction scores, measuring patient's overall health status/functional status. (3.IT-6.1)

Unique RHP Outcome Identification Number: 121988304.3.2

Performing Provider Name/TPI: Lakes Regional MHMR Center/121988304

Outcome Description

IT-6.1: Percent improvement over baseline of patient satisfaction scores, measuring patient's overall health status/functional status

Process Milestones:
*****In DY3, we will develop and test data systems related to measuring patient satisfaction and survey an initial group of 30 individuals to establish the patient satisfaction baseline improvement goal.
Outcome Improvement Targets for each year:

- In DY4, Improvement Target-6.1 is to achieve 20% improvement over baseline of patient satisfaction scores measuring patient's overall health status/functional status in at least 75 individuals. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

- In DY5, Improvement Target-6.1 is to achieve 40% improvement over satisfaction scores in DY4 measuring patient's overall health status/functional status in at least 135 individuals by end of Waiver. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

By the end of the waiver, our goal is to achieve 60% improvement over baseline of patient satisfaction scores regarding satisfaction with patient's overall health status/functional status.

Rationale

Our telemedicine/ telehealth program will develop and incorporate data systems to provide information and feedback with technical and clinical processes. This data will be used to help us manage the expansion of the program in Kaufman County and ensure that we are continuously improving the quality of the services we provide to ensure patient satisfaction. Although this Telemedicine/Telehealth Introduction/Expansion Project will enable services from multiple provider specialties, it will share significant focus with the Lakes Regional Crisis Respite – Behavioral Support Wraparound Program Project. Within the IDD (Intellectual and

Developmental Disabilities) population, research has shown that there is a much greater instance of health problems[534]. With the help of telemedicine/telehealth technology, program staff will monitor mental and physical health status and outcomes to facilitate integrated care, improvement of patient satisfaction and outcomes for the target population[535]. The specific ACT model planned for the program will result in better control of psychiatric symptoms, better quality of life overall, and greater consumer and family member satisfaction[536]. The projected outcomes relate to an improvement in access to care, the quality of care and health outcomes, as well as an overall improvement in health for the target population. The CG-CAHPS survey produced comparable data on the patient's perspective on care that allows objective and meaningful comparisons between institutions on domains that are important to consumers[537].

Lakes Regional has the data to evaluate patient satisfaction with overall health status/functional status at this time. Additionally, Lakes Regional will collaborate with 39 other MHMR centers across the state to develop and select a small set of outcome measures for Category 3, based on the valuation studies conducted by health care economists at the University of Texas and University of Houston. The collaborative will develop a strategy for collection of data through shared data sources in local communities. Centers are currently in the process of engaging a consultant to provide leadership and consultation for the project

The sharing of data (overall health survey results) between agencies and providers in the region regarding consumer satisfaction will result in a greater awareness of the efficacy of the crisis respite wraparound model in improving life satisfaction following better self-management skills and follow-up to care. Identified within the Crisis Respite Project there is significant data analysis planned with encounter based assessments to show and measure improvement in customer satisfaction in health/ functional status.

Outcome Measure Valuation:

Approach/Methodology:
DY3 – Process Milestone (P-3) will involve developing and testing data systems related to measuring patient satisfaction to establish a methodology for measuring patient satisfaction in Years 4 and 5.

- DY4 – Improvement Target 6.1 will establish a 20% improvement over baseline of patient satisfaction scores measuring patient's overall health status/functional status in at least 75 additional individuals. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

[534] Journal of Intellectual Disability Research 48 (2): 93-102
[535] Journal of Applied Research in Intellectual Disabilities. 19: 214-218
[536] Phillips et al, 2001. . .Teague et al, 1995
[537] RHP Planning Protocol, page 398

- DY5 – Improvement Target 6.1 will establish a 40% improvement over satisfaction scores in DY4 measuring patient's overall health status/functional status in at least 135 additional individuals by end of Waiver. Percentage will be measured by percent improvement in targeted patient satisfaction domain (numerator) over number of patients who were administered the survey (denominator).

Rationale/Justification: Our telemedicine/telehealth project will provide flexibility for the type of services and where the connections between providers can be established. With the rural nature of Kaufman County, the internet cloud based implementation planned for the project will open up the area for video communication between doctors' offices, schools, hospitals, jails, behavioral health clinics, and just about anywhere that there is broadband internet access (providers working out of their homes). The possibilities for expansion of this program are numerous and the services provided will result in overall cost reductions for the region. This project was valued based on studies completed by the UT Houston School of Public Health and the UT Austin Center for Social Work Research: "Valuing Access to Timely Services through Telemedicine." These studies were completed through a contract with Center for Health Care Services. These valuation studies used cost-utility analysis which measure program cost in dollars and the health consequences in utility-weighted units called quality-adjusted life-years (QALYs). QALYS incorporate costs averted when known (e.g., emergency room visits that are avoided).

Outcome Measure: 3IT-6.1 Percent improvement over baseline of patient satisfaction scores. A process milestone in Year 3 will establish baseline for improvement in patient satisfaction with overall health/functional status; Improvement targets in DY's 4 and 5 will establish percent improvement over baseline in patient satisfaction scores, ending Year 5 with a 60% improvement over baseline in patient satisfaction scores.

Size – In providing the new technology to clinical programs in the region, the telemedicine program will require all of the needed infrastructure and support operations. This includes the implementation of data line enhancements, internet-cloud private network connectivity (VPN), and server based audio/video processing and session management. The program will involve collection and maintenance of data on potentially 210 clients over the course of the waiver period.

Project Scope – The proposed project is projected to measure satisfaction with improvement in overall health status/functional status for those receiving telemedicine/telehealth during the waiver period. It is estimated the potential client base could reach 210 individuals over the waiver period in Kaufman County**.**

Population Served – The population targeted to be served is individuals with a primary behavioral health and/or dually diagnosed with IDD/ASD (Autism Spectrum Disorders)/MH (one or all of those diagnoses).

Community Benefit and Cost Avoidance – Improved satisfaction with overall health outcomes will lead to improved self-maintenance of physical and psychiatric health outcomes, as well as less frequent need for hospital visits and stays that result from crisis/exacerbation of symptoms. Consistently implementing monitoring and follow-up in the approach to care will lead to cost avoidance in that patients will no longer require the support of more expensive settings for symptom maintenance. Sharing evidence-based data with other providers on patient satisfaction in this area will serve to "enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment"[538].

Addressing Priority Community Need – Currently there is no telemedicine/ telehealth program to support routine access to specialty care or for crisis respite/wraparound services in Kaufman County. This results in the frequent use of more restrictive and expensive settings for care, such as psychiatric hospitals, emergency rooms and institutional settings.

Title of Outcome Measure (Improvement Target): 3.IT-6.1 Patient Satisfaction: Percent improvement over baseline of patient satisfaction scores, measuring patient's overall health status/functional status. (3.IT-6.1)

Unique RHP Outcome Identification Number:

121988304.3.3 (IT-6.1)

Performing Provider Name/TPI:

Lakes Regional MHMR Center/121988304

Outcome Description:

OD- 6 Patient Satisfaction

3.IT-6.1 Patient Satisfaction: Percent improvement over baseline of patient satisfaction scores, measuring patient's overall health status/functional status.

*In DY3, Process Milestone 3 [P-4] Conduct Plan, Do, Study, Act (PCSA) cycles to improve data collection and intervention activities; Outcome Improvement Target IT-6.1 to achieve a mean of 10% improvement over baseline of individual patient satisfaction scores as averaged in the participant pool.

*In DY 4 Outcome Improvement Target IT-6.1 to achieve a mean of 10% improvement over baseline of individual patient satisfaction scores as averaged in the participant pool.

*In DY 5, Outcome Improvement Target IT-6.1 to achieve a mean of 15% improvement over baseline of individual patient satisfaction scores as averaged in the participant pool.

By the end of the waiver, Lakes Regional Mental Health Mental Retardation Center (LRMHMRC) goal is to achieve 15% improvement over individual baseline of individual satisfaction scores as averaged in the participant cumulative data regarding satisfaction with program participants' overall health status/functional status.

Rationale:

Process milestones of Project Planning (with necessary components), Establishing Baselines, and conducting PDSA cycles with some details added were adequate general descriptions ~~of the area of concern~~ in creating the LRMHMRC Cognitive Enhancement Therapy (CET) project. The CET project is to introduce participants to social awareness and cognitive development exercises thereby improving their social cognition and functioning in the community. The State contracted services they are currently provided will change to the functional assessment of their condition and improvement ~~on a quarterly basis~~ through use of the Adult Needs Skills Assessment (ANSA) and Child and Adolescent Needs and Strength (CANS) standardized

assessment instruments. A project improvement tracking measure will be the SP-36 quality of life measurement to inform the individual and the project of the broader impact the service ~~change~~ is having. Finally, the outcome improvement target measure of the level of satisfaction with services ~~using~~ will use the validated instrument Mental Health Statistics Improvement Program Consumer Survey (MHSIP). Use of the MHSIP provides a standard instrument and protocol for data collection and processing consistent through the development of mental health programs with the effort of Center for Mental Health Services (CMHS) for improvement of state mental health programs. The MHSIP is a validated standardized instrument viewed as an equivalent alternative to the Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG-CAHPS) for outpatient mental health services. DY2 and DY3 efforts at establishing baselines will inform and likely lead to refinement of gross improvement target estimations.

Lakes Regional has the data to evaluate patient satisfaction with overall health status/functional status at this time. Additionally, Lakes Regional will collaborate with 39 other MHMR centers across the state to develop and select a small set of outcome measures for Category 3, based on the valuation studies conducted by health care economists at the University of Texas and University of Houston. The collaborative will develop a strategy for collection of data through shared data sources in local communities. Centers are currently in the process of engaging a consultant to provide leadership and consultation for the project

Outcome Measure Valuation:

The project will implement outcome measure 3.IT-6.1 to measure improvement over baseline of patient satisfaction scores regarding patient's overall health status/functional status. This outcome measure will be valued by assessing community needs identified for Region 9 addressed through the RHP Plan, such as the need for more care coordination and overuse of emergency department (ED) services. When patients experience stagnation after stabilization on medications but have no effective service for life improvement in the prodromal aspects of their illness, they experience lack of satisfaction and inability to self-monitor and manage symptoms effectively as a result. Supporting individuals in the community at a lesser cost than hospital or institutional care, and avoiding costs in emergency rooms (ER) and psychiatric hospitals is a predictor to overall improvement in social functioning in the community, and greater quality of life satisfaction. In keeping with the waiver Program Funding Mechanics (PFM) Protocol for the DSRIP pool the approach to valuation followed the formula prescribed on page 27 of the document for Non-Hospital Performing Providers for Category 3 allowing DY2 5%, DY3 10%, DY4 10%, and DY5 20%.

DY3– Process Milestone (P-4) conduct Plan, Do, Study, Act (PDSA) cycles to improve data collection and intervention activities will inform the project for continuous quality improvement. Improvement Target 6.1 to establish a mean of 10% improvement over baseline of individual patient satisfaction scores in selected domain.

DY4 – Improvement Target 6.1 to establish a mean of 10% improvement over baseline of individual patient satisfaction scores in selected domain. It is expected that service recipients will experience improved overall satisfaction with services due to improved quality of life; improved satisfaction is expected to lead to a decrease in overuse of emergency department services and other barriers to access to care in the community for the target population, as well as improved ability to successfully and consistently self-manage symptoms in the community.

DY5 – Improvement Target 6.1 to establish a mean of 15% improvement over baseline of individual patient satisfaction scores in selected domain: See approach/methodology for **IT-6.1 for DY4.**

Rationale/Justification:

Outcome Measure: 3.IT-6.1 Percent improvement over baseline of patient satisfaction scores. Individual responses to the MHSIP survey will be used as baseline to the participants against which to compare end of program responses. The average of the difference in the scores of all the participants in the program over time will serve as a continuing aggregate outcome target to maintain above 15% beginning DY5.

Size – The project will be Cognitive Enhancement Therapy serving six (6) ~~two (2)~~ groups over the waiver of mental health clinic clients weekly with a combined population of 16 to 24 individuals for a total of 168 service hours per graduate over the course of 48 weeks or a possible 12,096 client hours.. DY2 activity is surveying and establishing what portion of the clinic population would meet inclusion criteria.

Project Scope – The proposed project ~~is projected to~~ will measure satisfaction with improvement in overall health status/functional status in the targeted population of identified eligible individuals (minimum of 60) in the Terrell Mental Health Clinic.

Population Served – The population targeted to be served are individuals stable on medications with Serious Mental Illness (SMI).

Community Benefit and Cost Avoidance – Improved satisfaction with overall health outcomes will lead to improved self-maintenance of physical and psychiatric health outcomes, as well as less frequent need for hospital visits and stays that result from crisis/exacerbation of symptoms. Consistently implementing monitoring and follow-up in the approach to care will lead to cost avoidance in that patients will no longer require the support of more expensive settings for symptom maintenance. Sharing evidence-based data with other providers on patient satisfaction in this area will serve to "enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment" (RHP Protocol, page 398).

Addressing Priority Community Need– In keeping with the Region 9 results of the Community Needs Assessment (CN.5) Behavioral Health - the need for services for improvement in the population with SMI leading to lowering health care costs and reducing hospital readmissions through higher functioning participants with greater community efficacy is the focus of the project.

Title of Outcome Measure (Improvement Target): IT-6.1 Percent Improvement over baseline of patient satisfaction scores

Unique RHP outcome identification number(s): 020979301.3.1

Performing Provider Name/TPI: Las Colinas Medical Center/020979301

Outcome Measure Description:
IT-6.1 Percent Improvement over baseline of patient satisfaction scores. At the end of the 5 year waiver, scores will be improved by 20%. Approximately 23% of our patients are either Medicaid eligible or indigent. We estimate more than 5,000 a year or 22,500 over course of the waiver will be impacted. Of those patients ,23 % are estimated to be Medicaid eligible or indigent. . It is estimated patients impacted will be DY 2-5,299, DY 3-5,564, DY 4-5,731, DY5-5,903. We do actively survey 100 patients a month/1200 a year

Process Milestones:

In DY 2 we will establish baseline data to measure for patient satisfaction scores. In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line to correctly measure the improvement. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.

Outcome improvement targets:

The target for the outcome measure is 10% improvement in scores over baseline in DY 4 and 20% over baseline in DY 5.

Rationale

The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders (IP /OP, out of hospital providers, etc) are identified and included in the plan. Indentifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan are a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to develop and test data systems to find measurement tool for improvement work on patient experience targets that are real-time .. The process milestone to is necessary due to timing delays of other survey results and need for direct feedback to specific interventions for patient experience that will be implemented.
In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The target for the outcome measure is to increase patient satisfaction scores by 20% by the end of the waiver period. An increase in patient satisfaction scores will be utilized as a measurement of the effectiveness of improvement work on targeted patient experiences.

Outcome Measure Valuation

Las Colinas Medical Center defined the population that will be directly impacted by the project as patients with Medicare and all patients who are the target of HCAHPS survey. The percentage of the population expected to be positively impacted by the project is all patients surveyed, which was determined based on studies of similar projects implemented elsewhere. We used the pricing matrix developed to determine the value to the health care system for each positive outcome realized as the result of our project. It was estimated based on CMS published penalties that in 5 years for not achieving satisfactory patient experience levels, 1.5% of Medicare revenues were in jeopardy. The Medicare average volume per year of 800 cases and rate per Medicare case of $8,654 was used to calculate the estimated loss of revenues using these penalty % for DY 2- 0.50%, DY 3- 0.75%, DY 4-0.94%, and DY5 -1.5% . This totaled $356,500 for a 5 year period.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 3. We believe this to be the correct number because when a person is positively impacted, patient experience improves, which results from improved safety and quality of care that better health outcomes and reduced costs. This was estimated a portion of potential revenue value and totaled $260,245 . To determine the value to the community of each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 3. We believe this to be the correct number because when a person is positively impacted, his or quality of life is improved, productivity is increased, and there is a reduced burden on society. This was estimated a portion of potential revenue value and totaled $ 214,303.

The total value of the project was calculated at $831,048. Approximately 79% of the project value was assigned to the Category 2 project, $657,118 and 21% to the Category 3 project, $173,930

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The target for the outcome measure is to increase patient satisfaction scores by 20% by the end of the waiver period.. An increase in patient satisfaction scores will be utilized as a measurement of the effectiveness of improvement work on targeted patient experiences.

Outcome Measure Valuation

In valuing our project, we took into account patient safety and quality improvements, cost avoidance, mortality, financial impact on patients and community and resources needed to impact the measure.

Medical Center of Lewisville defined the population that will be directly impacted by the project as patients with Medicare and all patients who are the target of HCAHPS survey. The percentage of the population expected to be positively impacted by the project is all patients surveyed, which was determined based on studies of similar projects implemented elsewhere. We used the pricing matrix developed to determine the value to the health care system for each positive outcome realized as the result of our project. It was estimated based on CMS published penalties that in 5 years for not achieving satisfactory patient experience levels, 1.5% of Medicare revenues were in jeopardy. The Medicare average volume per year of 2,150 cases and rate per Medicare case of $8,634 was used to calculate the estimated loss of revenues using these penalty % for DY 2- 0.50%, DY 3- 0.75%, DY 4-0.94%, and DY5 -1.5% . This totaled $771,480 for a 5 year period.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, patient experience improves, which results from improved safety and quality of care that better health outcomes and reduced costs. This was estimated a portion of potential revenue value and totaled $154,296. To determine the value to the community of each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project is a 1. We believe this to be the correct number because when a person is positively impacted, his or quality of life is improved, productivity is increased, and there is a reduced burden on society. This was estimated a portion of potential revenue value and totaled $ 149,195.

The total value of the project was calculated at $1,074,974. Approximately 79% of the project value was assigned to the Category 2 project, $849,981 and 21% to the Category 3 project, $224,900.

Title of Outcome Measure (Improvement Target): IT-4.8 Sepsis mortality

Unique RHP outcome identification number(s): 094192402.3.2

Performing Provider Name/TPI: Medical Center of Lewisville/094192402

Outcome Measure Description:

IT-4.8 Sepsis mortality is the percentage of those patients diagnosed with sepsis, severe sepsis or septic shock and/or an infection and organ dysfunction that expire during hospitalization. Mortality rates are very high in US from sepsis. With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management Bundles we will decrease the mortality rate. We expect to diagnose and treat 647 sepsis patients (estimated at DY 1- 93, DY2-112, DY 3- 134, DY 4- 154, DY 5-154).

Process Milestones:

In DY 2 we will establish baseline rates for sepsis mortality to measure for improvement targets It is expected that the morality rate for this population in DY 2 will initially increase compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure same mortality based on same standards of care.. IN DY2 and 3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

Outcome Improvement targets:

By DY 4 and DY5, the improvement target is Sepsis mortality reduction of 20% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for sepsis mortality as defined by protocol in order to measure improvement in DY 4 and DY 5.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

According to the Center for Disease Control and Prevention (CDC) 2007 statistics, septicemia is the 10th leading cause of death in the United States. . Each year mortality from severe sepsis and septic shock nationally have consistently been reported to be over 20-25% for severe sepsis

and as high as 70% for septic shock. The outcome target for mortality was selected as evidence based initiatives put in place can reduce mortality. In order to measure the effectiveness of sepsis initiatives mortality rate reduction will be measured

Outcome Measure Valuation

Medical Center of Lewisville Center defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 647 which was determined based on outcome target for reduction in mortality by 20% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 17 . The estimated pricing for morality of $10,000 per life was used. This reflected such considerations a costs for care, lost wages , and quality of life. This totaled approximately $198,129 for 5 years.
The total sepsis population is expected to be positively impacted by the project for a reduction in length of stay by 20% from baseline average of 7 days per patient. This was estimated at total of reduced in patient days by DY 5 of 647. The estimated cost per day for a sepsis patient is $930. This totaled approximately $751,905.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for mortality is a 5. We believe this to be the correct number because when a person is positively impacted, mortality will decrease, reducing costs and resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced mortality was $177,100.
To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for reduced length stay is a 4. We believe this to be the correct number because when length of stay is reduced, there is less risk for complications resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced length of stay is $601,524.

To determine the value to the community of each individual positively impacted by reduced mortality, we concluded that, on a scale of 1 to 5, the value of this project is a 5. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of mortality reduction at $177,100.
To determine the value to the community of each individual positively impacted by reduced length of stay, we concluded that, on a scale of 1 to 5, the value of this project is a 4. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of length of stay reduction at $526,333.

The total value of the project then was estimated at $2,431,091. Approximately 79.1% of the total value was assigned to Category 2 project ($1,923,053) and the remaining 10.46% of value

assigned to Category 3 outcome for Sepsis Mortality ($254,518) and 10.46% assigned to Category 3 outcome for reduced Average Length of Stay ($254,520).

Title of Outcome Measure (Improvement Target): IT-4.9 Average length of stay

Unique RHP outcome identification number(s): 094192402.3.3

Performing Provider Name/TPI: Medical Center of Lewisville/94192402

Outcome Measure Description

IT-4.9: Average length of stay is the number days a patient is hospitalized when diagnosed with severe sepsis, septic shock, and/or lactate>4mmol/L (36mg/dl). With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management of care, average length stay should decrease as result. We expect to diagnose and treat 647 sepsis patients (estimated at DY 1- 93, DY2-112, DY 3- 134, DY 4- 154, DY 5-154).

Process Milestones:

In DY 2 we will establish baseline rates for sepsis average length of stay to measure for improvement targets. It is expected that the average length of stay for this population in DY 2 will initially be different compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure length of stay based on same standards of care. IN DY2 and 3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

Outcome improvement targets:

By DY 4 and DY5, the improvement target is Sepsis average length of stay of 20% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for the average length of stay for patient receiving Sepsis Resuscitation Management Bundle Care in order to measure improvement in DY 4 and DY 5. Typically average length of stay for ICU has been measure but not for the entire hospitalization.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

The outcome improvement target to reduce length of stay was selected to measure the effectiveness of evidence based care initiatives for sepsis diagnosis and treatment. Average length of stay reduction can also show advancement of sepsis care that is effective through the continuum of the hospital not just in critical care units and comprehensive, coordinated discharge planning.

Outcome Measure Valuation:

Medical Center of Lewisville Center defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 647 which was determined based on outcome target for reduction in mortality by 20% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 17. The estimated pricing for morality of $10,000 per life was used. This reflected such considerations a costs for care, lost wages , and quality of life. This totaled approximately $198,129 for 5 years.
The total sepsis population is expected to be positively impacted by the project for a reduction in length of stay by 20% from baseline average of 7 days per patient. This was estimated at total of reduced in patient days by DY 5 of 647. The estimated cost per day for a sepsis patient is $930. This totaled approximately $751,905.

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for mortality is a 5. We believe this to be the correct number because when a person is positively impacted, mortality will decrease, reducing costs and resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced mortality was $177,100.
To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for reduced length stay is a 4. We believe this to be the correct number because when length of stay is reduced, there is less risk for complications resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced length of stay is $601,524.

To determine the value to the community of each individual positively impacted by reduced mortality, we concluded that, on a scale of 1 to 5, the value of this project is a 5. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of mortality reduction at $177,100.
To determine the value to the community of each individual positively impacted by reduced length of stay, we concluded that, on a scale of 1 to 5, the value of this project is a 4. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of length of stay reduction at $526,333.

The total value of the project then was estimated at $2,431,091. Approximately 79.1% of the total value was assigned to Category 2 project ($1,923,053) and the remaining 10.46% of value assigned to Category 3 outcome for Sepsis Mortality ($254,518) and 10.46% assigned to Category 3 outcome for reduced Average Length of Stay ($254,520).

Title of Outcome Measure (Improvement Target): IT-9.2 ED appropriate utilization

Unique RHP outcome identification number(s): 094192402.3.4

Performing Provider Name/TPI: Medical Center of Lewisville/094192402

Outcome Measure Description

The outcome measure is to reduce ED visits for those patients who are part of Patient Navigation program. The target for the outcome is to reduce ED visits for these patients by 65 % which equates to a 15% overall ED visit reduction by the end of the waiver period.

Process Milestone:

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for ED Visits in order to correctly measure the reduction for those patients specifically enrolled in the navigation program. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.

Outcome Improvement targets for each year:

Our goal is to reduce the inappropriate ED visits of the target popualtion by 65 % by DY5. It is estimated the ED visits by target population if continued at 5.77 per year are DY3-1,875 DY4-3,375 DY5-4,876. With an effective patient navigation program we anticpate the ED visits from patients in the patient navigation program will be reduced to DY3, -650, DY4-1,170 DY5-1,690, a reduction of 6,616 visits. The overall ED visits baseline is 43,000 visits per year, a reduction of 6,616 is an overall reduction in ED visits of 15% by DY 5,(DY3-3%, DY4 -5%, DY5-7%).

Rationale

The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. Various data points from both internal and external reporting vary and it will be necessary to ensure the defined population is known so targeted interventions are addressed. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

The target for the outcome measure to reduce ED visits by 15% by the of the waiver period. We have implemented initiatives to reduce ED visits (i.e. improved discharge planning, etc) but the patients continue to utilize ED as primary medical home. We believe a renewed focus is necessary to make significant reductions in rate of ED utilization by patients.

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders (IP /OP, out of hospital providers, etc) are identified and included in the plan. Indentifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for ED utilization in order to correctly measure a rate reduction for those patients eligible for patient navigation. We have estimated the number of patients with visits > 4 times a year and a % of those patients who will be eligble (DY3-25%, DY4-45%, DY5-65%). The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus once patient navigation criteria are established. Various data points from both internal and external reporting vary and it will be necessary to ensure the defined population is known so targeted interventions are addressed. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

Outcome Measure Valuation

In valuing our projects we took into account direct patient ED cost and resources needed to impact the measure.

Medical Center of Lewisville recognized that Category 3 outcomes represent the value that CMS hopes to achieve through the waiver. Accordingly, the project and outcomes was computed with a total value of the Category 3 outcomes connected to each project. Medical Center of Lewisville estimated the ED visits by target population if continued at 5.77 per year are DY3-1,875 DY4-3,375 DY5-4,876. With an effective patient navigation program we anticipate the ED visits from patients in the patient navigation program will be reduced to DY3, -650, DY4-1,170 DY5-1,690, a reduction of 6,616 visits. DY3, -650, DY4-1,170 DY5-1,690, a reduction of 6,616 visits. The average, direct cost of an ED visit from internal cost information is $250 per visit so for DY 3-5 cost saved would be $1,654,300. The patient navigation program, 4 year costs for the waiver period were estimated at $704,000. This cost included direct staff hired to run the navigation program (1-2 RN/case managers) and 10% overhead for management time and additional costs (transportation, interpreters, etc.). The total net value was $950,300 ($1,654,300 less $704,000). Approximately 79.06% of the total value was assigned to Category 2 project ($751,402) and the remaining 20.93% of value assigned to Category 3 outcome for reduction of ED visits ($198,898).

Rationale/Justification: The outcome improvement targets are dependent on the target population served size and also processes to be put in place to achieve the target..

Title of Outcome Measure (Improvement Target): IT-4.10 Treatment Rate Ischemic Stroke (IV t-PA)

Unique RHP outcome identification number(s): 020943901.3.1

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description

The outcome measure is to increase the Treatment rate for Ischemic Stroke patients by IV t-PA.. An acute stroke is a medical emergency and is the leading cause of disability in the United States. Approximately 1.9 million brain cells die every minute during an acute stroke. Timely diagnosis and initiation of treatment is essential to good outcomes. Getting this medication to appropriate patients as quickly and as safely as possible ensures that patients have the best chance at an optimal outcome. When patients present to the Emergency Room, physicians must assess the first onset of symptoms. IV tPA is the only FDA approved treatment for ischemic stroke patients in first 4.5 hours from first onset of symptoms to restore blood flow in the brain. The IV tPA is adminstered via IV to dissolve the blot clot causing the stroke. If a patient presents > 4.5 hours from first symptom, they can be assessed to see if they qualify for comphrensive treatment (endovascular treatments) but the window has closed on the IV tPA treatment opportunity. The quicker blow flow is restored the great chance of good outcomes. Once Emergency Room phsycians have access to neuro specialists, they have assistance in the decision making process to use intravenous (IV) thrombolysis with tissue plasominogen activator (tPA). However it is still the Emergency Rooms physicians' education ,assessment and his/her willingness to use IV tPA for eligible patients that drives the ultimate use of the treatment option. Barriers to using IV tPA include risk of futher bleeding and death. Over time with the telestroke network access and education we believe we can increase treatment rates. By increasing the number of patients that are treated with IV t-PA we can prevent or decrease the patient's chance of permanent and/or long term disability. The target for the outcome measure is to improve the rate of IV tPA treatment for the targeted population by 15 % by end of the waiver period

Process Milestone:

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line treatment rate in order to correctly measure a rate improvement. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.
The process milestone to establish the baseline rate is necessary to understand the starting point of treatment rates for stroke. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

Outcome improvement targets:

In DY 4, we will improve the treatment rate for stroke patients by 10%. In DY5, we will improve the rate to15%.

Rationale

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate treatment rate in order to correctly measure the improvement. The process milestone to establish the baseline rate is necessary to understand the starting point of patient population for stroke patients consult for treatment. Also an assessment will be conducted to assess patients at remote sites for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The outcome improvement target of increasing the Treatment Rate of Stroke patient will measure effectiveness of protocols and training of telemedicine stroke program implemented. With an effective program, access to specialty care and availability of treatment options will improve.

Outcome Measure Valuation

Medical City Dallas defined the population that will be directly impacted by the project as patients receiving a neuro-specialist consult. To provide these consults, neuro-specialists will need to be secured and available 24/7 for 40 additional sites. The estimate value is $1,092,000 for 4 years of the project based on minimum 30 minute time per consult valued at $78 each - annual income of specialist 650k year and volumes ,DY2-2000,DY3-3000, DY4-4000, DY5-5000. It will be necessary to continue to train physicians and staff on stroke protocols, treatment and use of technology. This is estimated at $183,00 per year for 4 years for a total value of $732,000.
It is also projected a 15% Treatment Rate for IV tPA in targeted population will result in less disability or severe disability in patients. We estimate 25% of the patients will be eligible for IV tPA (3500 patients, DY2-500, DY3 -750, DY4-1000, DY5-1250) and treatment rate at 15% by DY 5, total 365 patient would receive treatment who would not have otherwise(DY2-25, DY3-52,

DY4-100, DY5-188). Of these 120 patients, 33% would have not long term disability bases on trial studies (DY2-8, DY3-17,DY4-33,DY5-62). It is estimated based on a British study, annual direct cost of disabled stroke patients and lost productivity was $30,600, for a total of $3,672,000.
In addition, length of stay will be reduced for stroke patients. We estimate this to be approximately 945 days with internal cost estimates per day of $1,000. This is a total value of $945,000.
The remainder of $23,085 for total value was reduced to balance total funding.

The total value of the project then was estimated at $6,417,915. Approximately 80.62% of the total value was assigned to Category 2 project ($5,174,491) and the remaining value was assigned to Category 3 outcomes 6.46% IV TPA Treatment Rate ($414,470), 6.46% for Average Length of Stay ($414,471) and 6.46% for Door To Needle Time ($414,483.

Title of Outcome Measure (Improvement Target): IT-4.10 Average Length of Stay (Stroke Patients)

Unique RHP outcome identification number(s): 020943901.3.2

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description:

The outcome measure is to reduce average length of stay (LOS) by increasing treatment rates and decreasing unnecessary transfers. The goal is to decrease LOS by 10% of the overall ischemic stroke population in targeted population.

Process Milestones:

The target for the outcome measure is to reduce the rate by 10% by the end of the waiver period. In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for readmissions in order to correctly measure a rate reduction. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.
The process milestone to establish the baseline rate is necessary to understand the starting point of patients ALOS and variables contributing to ALOS (ICU, discharge planning barriers, rehabilitation need, etc).

Outcome improvement targets:

The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

In DY 4, the target is to reduce ALOS for stroke patients by 5% from baseline. In DY 5, reduction is targeted at 5%. By the end of the waiver period we will have achieved a 10% reduction. Increased access to specialist is necessary to make appropriate stoke treatment available and significant reductions in ALOS.

Rationale

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for admissions in order to correctly measure a rate reduction. The process milestone to establish the baseline rate is necessary to understand the starting point of patients population ALOS of stroke patients that received a consult and treatment. Also an assessment will be conducted to assess patients at remote sites for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The outcome target for average length stay was selected as a measurement of effective stroke program. With evidence based care for stroke, average length of stay should decrease.

Outcome measure valuation:

Medical City Dallas defined the population that will be directly impacted by the project as patients receiving a neuro-specialist consult. To provide these consults, neuro-specialists will need to be secured and available 24/7 for 40 additional sites. Title of Outcome Measure (Improvement Target): IT-4.10 Door to Needle time for IV t-PA administration

Unique RHP outcome identification number(s): 020943901.3.3

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description:

The outcome measure is improve the time from patient presenting to hospital to diagnosing and treating stroke patient with appropriate IV t-PA. An acute stroke is a medical emergency. Approximately 1.9 million brain cells die every minute during an acute stroke. Timely diagnosis and initiation of treatment is essential to good outcomes. Getting this medication to appropriate patients as quickly and as safely as possible ensures that patients have the best chance at an optimal outcome. When patients present to the Emergency Room, physicians must assess the first onset of symptoms. IV tPA is the only FDA approved treatment for ischemic stroke patients in first 3-4.5 hours from first onset of symptoms to restore blood flow in the brain. The IV tPA is adminstered via IV to dissolve the blood clot causing the stroke. The quicker blood flow is restored the greater chance of good outcomes. Some researchers estimate that among 100 patients given tPA within the 3 to 4.5-hour treatment window, every 10-minute delay in the start of therapy reduces by 1 the number of patients having an improved disability outcome. The IV tPA drug is strongly time dependent. The efficacy of the drug over time in dissolving the clot decreases dramatically and patients may not benefit.
Since eligible patients are presenting to the ED anywhere within 4.5 hours of first symptoms, the window of effective IV tPA treatment time can be limited. The specialty consult, testing (CT, etc) and diagnosis must be done quickly. The total IV tPA treatment time itself can take anywhere from as low as 20 minutes to a long as 60 minutes to complete. Thus a time standard has been established for time patient presents (Door) to the time IV tPA treatment begins (Needle). This measures the efficiency and effectiveness of stroke protocols put in place to triage, diagnose and treat or other disposition (transfer, no treat) of patients. The American Stroke Association (ASA) has set the quality measure/target for initiating this life saving treatment at 60 minutes upon patient arrival. The target for the outcome measure is to improve TBD by the end of the waiver period

Process Milestones:

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for readmissions in order to correctly measure a rate reduction. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.

Outcome Improvement Targets for each year

In DY 4, we will improve to Door to Needle time by 10 %. In DY 5 the target will improve 10 %.

Rationale

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for door to needle time in order to correctly measure a rate reduction. The process milestone to establish the baseline rate is necessary to understand the starting point for treatment of stroke patients with a consult for treatment. Also an assessment will be conducted to assess patients at remote sites for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The outcome target to reduce /improve the Door to Needle Time will measure effectiveness of telestroke program elements for quick access to consults timeliness of consult delivery, effectiveness of consult to begin life saving treatment within 60 minutes of arrival.

Project Valuation

Medical City Dallas defined the population that will be directly impacted by the project as patients receiving a neuro-specialist consult. To provide these consults, neuro-specialists will need to be secured and available 24/7 for 40 additional sites. The estimate value is $1,092,000 for 4 years of the project based on minimum 30 minute time per consult valued at $78 each - annual income of specialist 650k year and volumes ,DY2-2000,DY3-3000, DY4-4000, DY5-5000. It will be necessary to continue to train physicians and staff on stroke protocols, treatment and use of technology. This is estimated at $183,00 per year for 4 years for a total value of $732,000.

It is also projected a 15% Treatment Rate for IV tPA in targeted population will result in less disability or severe disability in patients. We estimate 25% of the patients will be eligible for IV tPA (3500 patients, DY2-500, DY3 -750, DY4-1000, DY5-1250) and treatment rate at 15% by DY 5, total 365 patient would receive treatment who would not have otherwise(DY2-25, DY3-52, DY4-100, DY5-188). Of these 120 patients, 33% would have not long term disability bases on trial studies (DY2-8, DY3-17,DY4-33,DY5-62). It is estimated based on a British study, annual direct cost of disabled stroke patients and lost productivity was $30,600, for a total of $3,672,000.

In addition, length of stay will be reduced for stroke patients. We estimate this to be approximately 945 days with internal cost estimates per day of $1,000. This is a total value of $945,000.
The remainder of $23,085 for total value was reduced to balance total funding.

The total value of the project then was estimated at $6,417,915. Approximately 80.62% of the total value was assigned to Category 2 project ($5,174,491) and the remaining value was assigned to Category 3 outcomes 6.46% IV TPA Treatment Rate ($414,470), 6.46% for Average Length of Stay ($414,471) and 6.46% for Door To Needle Time ($414,483.

Title of Outcome Measure (Improvement Target): IT-2.4 Behavioral Health/ Substance Abuse (BH/SA) Admission Rate

Unique RHP outcome identification number(s): 020943901.3.4

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measurement Description:

The outcome measure is to reduce preventable admissions to hospitals for those patients that with a Behavioral Health or Substance Abuse primary diagnosis or when a significant secondary diagnosis. The rate is defined as a total of adult discharges for Behavioral health/substance abuse as primary diagnosis and significant secondary diagnosis as a percent of total adult population in the region. We estimate based on market data the rate in the region is .505% currently.
The target for the outcome measure is to reduce the regional rate by 1%by the end of the waiver period. We are currently focused on a baseline of admission from telemedicine sites of 304. It is estimated these admission will be reduced by DY 2-5%, DY 3-15%, 15% in DY 4 and 15% in DY5 for a total of 50% reduction from baseline, of 152 admissions. This outcome measure has also been selected for project 020943901.2.1 (outcome 020943901.3.6). The outcome target for 020943901.3.4 is the measure of admission reduction specifically originating from Emergency rooms for lack of psychiatric specialty care. Project 020943901.2.1, (outcome 020943901.3.6) will measure the reduction in admissions resulting from improved access to medical care with integrated primary and behavioral care. Both projects are expected to impact Behavioral Health/Substance Abuse admissions but will impact different causes of the admission (lack of primary care/medical care or specialty care access).

Process Milestones

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for admissions in order to correctly measure a rate reductionThe focus is on patient with medical issues who are not receiving care, thus we will establish baseline for patients without primacy care access. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders from the baseline analysis and development of Behavioral Health admission Improvement Plan

Outcome improvement targets

In DY 4, we expected to reduce the admission rate by .5% and in DY 5, another .5% reduction from baselinefor a total of 1% reduction from baseline.

Rationale

The process milestone to establish the baseline rate is necessary to understand the target patient population. Various data points from both internal and external reporting vary and it will be necessary to ensure the defined population is known so targeted interventions are addressed. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

The target for the outcome measure admission rate is to reduce the rate by 1% by the end of the waiver period. Increased access to specialists is necessary to make significant reductions in the admission rate.

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for admissions in order to correctly measure a rate reduction. The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. We have primary diagnosis data analyzed but significant secondary diagnosis will need to be identified and a baseline established. Also an assessment will be conducted to see patients for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

Outcome Measure Valuation

The economic value of each targeted improvement outcome from evidence based studies was used a guide for the overall value of project. Additional value was considered for resource investments needed, timelines, cost avoidance, community benefit and risk and project scope. Medical City Dallas defined the population that will be directly impacted by the project as patients receiving a psychiatric consult. To provide these consults, psychiatric specialists will need to be secured and available 24/7. The estimate value is $1,825,000 for 5 years of the project based on daily value of $1,000. Additional 5 year values for resources needed for the project include 1) administrator $500,000 2) staff $300,000, 3) IT equipment , IT resources and IT lines $800,000, and 4) training and education $183,000. In addition, it is projected 152

Behavioral Health/Substance abuse admission will be avoided. These are valued at $285,456 based on internal cost per admission of $1,878.
An additional 15% value was added for overhead for administering the program (CEO time, Medical staff etc.), $541,200.
The remainder of $36,622 for total value was added to balance total funding.
Another approach for project value was reviewed based on estimated DY3, DY 4 and DY 5 additional capacity from timely discharge resulting from telemedicine consults (DY3-1500, DY 4-2300, DY5-2400). We estimated additional visits of 12,400 were would be possible from decreased holding and turn around time for ED visits. We used the average contribution margin for Medicaid visit from internal data of $360/ per visit for a total of $4,464,000. We believe this supports the overall valuation of $4,471,278.

The total value of the project then was estimated at $4,471,278. Approximately 80.65% of the total value was assigned to Category 2 project ($3,606,157) and the remaining 19.34% of value assigned to Category 3 outcome for Behavior Health/Substance abuse Admission Rate ($865,121).

Title of Outcome Measure (Improvement Target): IT-9.3 Pediatric/Young Adult Asthma Emergency Department Visits - NQF 1381

Unique RHP outcome identification number(s): 020943901.3.5

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measurement Description:

The outcome measure is to reduce emergency room visits from pediatric/young adult asthma patients with primary and secondary diagnosis. The target for the outcome measure is to reduce visit rate by 35% by the end of the waiver.

Process Milestones:

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for asthma ED visits in order to correctly measure a rate reduction. Based on current measurements we estimate there are 1,100 Pediatric asthma ED visits per year, of which 65% are Medicaid eligible and indigent. Current estimates may not be based on same defined (age and diagnosis) as required, so a baseline will be developed in DY 2. The target population will be Medicaid and indigent patients, 715 patients. In DY 3, we will test and develop data systems for referrals, tracking patients with asthma and primary care medical home.

Outcome improvement targets:

In DY 3-5 we will begin to measure and report the rate and improvement target of a DY3-5% ,DY4-15%, DY5- 15% for a total 35% reduction from total baseline visits of 1100. (DY3-55, DY4-165- DY5-165) We expected to reduce the rate of Medicaid and indigent patients (715 visit a year) by 55%,385 visit per year (which 35% of total visits,1100).

Rationale

The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. Various data points from both internal and external reporting vary and it will be necessary to ensure the defined population is known so targeted interventions are addressed. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

The target for the outcome measure pediatric/young adult emergency room visits is to reduce the rate by 35% by the end of the waiver period. This outcome improvement will measure initiatives in new clinic for chronic care management.

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders (IP /OP, out of hospital providers, etc) are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for emergency room visits in order to correctly measure a rate reduction. The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. Various data points from both internal and external reporting vary and it will be necessary to ensure the defined population is known so targeted interventions are addressed. Additional data points necessary include zip codes of targeted population, primary care/medical home status and family and social support network. In DY 3 -5, we will be reporting on the target improvement measure.

Outcome Measure Valuation

The economic value of each targeted improvement outcome obtained from evidence based studies was used a guide for the overall value of projectMedical City Dallas defined the population that will be directly impacted by the project as patients receive a medical home at the pediatric clinic and those patients with pediatric asthma. There were 2 measures used for this project valuation, patient provided a medical home and pediatric/young adult emergency room visits. The population expected to be positively impacted by the project for primary care and medical home is 3,000 patients by DY 5 (DY3-1000, DY 4-2000, DY5- 3000). The estimated pricing for medical home was $650 per year per patient. This value was obtained from averages of various PCMH studies (Intermountain Healthcare, Blue Cross Blue Shield, etc.) The value is based on investing in primary care patient centered medical homes resulting in improved quality of care and patient experiences and costs compared to non-PCMH patients and reductions in expensive hospital and emergency department utilization. This totaled approximately $3,900,000 for 5 years.
The population expected to be positively impacted by the project for reduction in pediatric/young adult asthma patients is 385 visits by DY 5. The estimated cost for a pediatric/young adult ED visits from internal data is $1210. This totaled approximately $465,850

The remainder of $1,896 for total value was added to balance total funding.
The total value of the project then was estimated at $4,367,746. Approximately 80.63% of the total value was assigned to Category 2 project ($3,521,529) and the remaining 19.37% of value assigned to Category 3 outcome for Pediatric/Young Adult ED Visits ($846,217).

Title of Outcome Measure (Improvement Target): IT-2.4 Behavioral Health/Substance Abuse (BH/SA) Admission Rate

Unique RHP outcome identification number(s): 020943901.3.6

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description

IT-2.4 Behavioral Health/Substance Abuse (BH/SA)

The outcome measure is to reduce preventable admissions to hospitals for those patients that with a Behavioral Health or Substance Abuse primary diagnosis or when a significant secondary diagnosis. The rate is defined as a total of adult discharges for Behavioral health/substance abuse as primary diagnosis and significant secondary diagnosis as a percent of total adult population in the region. We estimate based on market data the rate in the region is .505% currently.
The target for the outcome measure is to reduce the rate by 1.3% by the end of the waiver period.

The selection of outcome measure is to reflect the effectiveness of integrating primary and behavioral care.. By integrating care for patient currently seeking psychiatric care, we believe the rate of admission will be reduced as coordinated care will address whole person as patients with serious mental disorders will receive treatment for medical and physical issues.. This outcome measure has also been selected for project 020943901.1.2 (outcome 020943901.3.4).The outcome target for 020943901.3.4 is the measure of admission reduction specifically originating from Emergency rooms for lack of psychiatric specialty care. This outcome for project 020943901.2.1, (outcome 020943901.3.6) will measure the reduction in admissions resulting from improved access to medical care with integrated primary and behavioral care. Both projects are expected to impact Behavioral Health/Substance Abuse admissions but will impact different causes of the admission (lack of primary care/medical care or specialty care access).

Process Milestones

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for admissions in order to correctly measure a rate reduction. In DY 3, we will disseminate findings, including lessons learned and best practices of admission protocols, to stakeholders to include ER physicians and psychiatrists.

The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. Various data points from both internal and external reporting vary

and it will be necessary to ensure the defined population is known so targeted interventions are addressed.

Outcome Improvement Targets for each year

We estimate an admit rate of 35% on behavioral health diagnosis in ED which results in target population of admissions to reduce of 875. We will reduce admissions for targeted population by 230 by the end of the waiver (DY2-3%, DY3-7%, DY4-15%, DY5-26%) We will reduce the regional rate of admission by DY5 by 1.3 %. The outcome improvement targets were selected as they are congruent with other goals of the organization and will result in improved health outcome of patients and reduce cost to the health system.

Rationale

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.
It will also be necessary in DY 2 to establish a base line rate for behavioral health/ substance abuse admissions in order to correctly measure a rate reduction. The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. We have primary diagnosis data analyzed but significant secondary diagnosis will need to be identified and a baseline established. Also an assessment will be conducted to see patients for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

Outcome Measure Valuation

The economic value of each targeted improvement outcome obtained from evidence based studies was used a guide for the overall value of project. Additional value was considered for resource investments needed, timelines, cost avoidance, community benefit, risks and project scope.
Medical City Dallas defined the population that will be directly impacted by the project as patients receive a primacy care medical home at the integrated primary care and behavioral care clinic.. The population expected to be positively impacted by the project for primary care and medical home is 2,500 patients by DY 5. The estimated pricing for medical home was $650

per year per patient. This value was obtained from averages of various PCMH studies (Intermountain Healthcare, Blue Cross Blue Shield, etc.) The value is based on investing in primary care patient centered medical homes resulting in improved quality of care and patient experiences and costs compared to non-PCMH patients and reductions in expensive hospital and emergency department utilization. This totaled approximately $4,225,000 for 5 years.
The population expected to be positively impacted by the project for reduction in Behavior Health/Substance Abuse admission rate and Behavior Health/Substance Abuse Readmission rate by DY 5. The estimated cost for a Behavior Health/Substance abuse admission from internal data is $1878. A reduction of 230 admissions was valued at $431,940. A reduction of 161 readmissions was valued at $302,358. This totaled approximately $734,298.

The remainder of $53,125 for total value was reduced to balance total funding.
The total value of the project then was estimated at $4,906,173. Approximately 80.63% of the total value was assigned to Category 2 project ($3,901,150). The remaining 10.24% of value was assigned to Category 3 outcome for Behavior Health/Substance Abuse Admission Rate ($502,512) and 10.24% of value was assigned to Cat 3 outcome for Behavior/Substance Abuse Re-Admission-30day ($502,511).

Title of Outcome Measure (Improvement Target): IT-3.8 Behavioral Health/Substance Abuse (BH/SA) 30 day readmission Rate

Unique RHP outcome identification number(s): 020943901.3.7

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description

IT-3.8 Behavioral Health/Substance Abuse (BH/SA) 30 day readmission Rate

The outcome measure is to reduce preventable readmissions to hospitals for those patients that with a Behavioral Health or Substance Abuse primary diagnosis or when a significant secondary diagnosis. The target for the outcome measure is to reduce the rate by 20% by the end of the waiver period.

Process Milestone

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. It will also be necessary establish a base line rate for re-admissions in order to correctly measure a rate reduction. In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders.

Outcome improvement Targets for each year

Our goal is to reduce to reduce Behavioral Health/Substance Abuse (BH/SA) 30 day readmission rate by DY3-5%, DY4-5%and DY 5-10% for a total reduction of 20%. We estimate the current number of readmission per year to 807, total reduced readmissions is estimated at 161 by the end of the waiver (DY3-40 DY4-40, DY5-81).

Rationale

In DY 2, we will engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plan. These are necessary steps to ensure all stakeholders are identified and included in the plan. Identifying capacity and resource needed to implement are required for budgeting purposes. Establishing timelines and documenting a plan is a guide to knowing when things need to occur, who is responsible for making them happen and the ultimate expectations and goals of the project. The documented plan and timelines serve as a tool to measure the performance in executing the project.

It will also be necessary in DY 2 to establish a base line rate for re-admissions in order to correctly measure a the reduction. The process milestone to establish the baseline rate is necessary to understand the starting point of patients to focus on. We have primary diagnosis data analyzed but significant secondary diagnosis will need to be identified and a baseline

established. Also an assessment will be conducted to see patients for which a telemedicine consult would be appropriate.

In DY 3, we will disseminate findings, including lessons learned and best practices, to stakeholders. This would include intervention impacts, learning from follow up on successes or failures and identified best practices. This feedback is significant to adjusting plans findings and continued engagement of stakeholders.

The outcome improvement target will measure the impact and effectiveness of integrating primary and behavioral health care in coordinating care post-discharge.

Outcome Measure Valuation

The economic value of each targeted improvement outcome obtained from evidence based studies was used a guide for the overall value of project. Additional value was considered for resource investments needed, timelines, cost avoidance, community benefit, risks and project scope.
Medical City Dallas defined the population that will be directly impacted by the project as patients receive a primacy care medical home at the integrated primary care and behavioral care clinic.. The population expected to be positively impacted by the project for primary care and medical home is 2,500 patients by DY 5. The estimated pricing for medical home was $650 per year per patient. This value was obtained from averages of various PCMH studies (Intermountain Healthcare, Blue Cross Blue Shield, etc.) The value is based on investing in primary care patient centered medical homes resulting in improved quality of care and patient experiences and costs compared to non-PCMH patients and reductions in expensive hospital and emergency department utilization. This totaled approximately $4,225,000 for 5 years.
The population expected to be positively impacted by the project for reduction in Behavior Health/Substance Abuse admission rate and Behavior Health/Substance Abuse Readmission rate by DY 5. The estimated cost for a Behavior Health/Substance abuse admission from internal data is $1878. A reduction of 230 admissions was valued at $431,940. A reduction of 161 readmissions was valued at $302,358. This totaled approximately $734,298.

The remainder of $53,125 for total value was reduced to balance total funding.
The total value of the project then was estimated at $4,906,173. Approximately 80.63% of the total value was assigned to Category 2 project ($3,901,150). The remaining 10.24% of value was assigned to Category 3 outcome for Behavior Health/Substance Abuse Admission Rate ($502,512) and 10.24% of value was assigned to Cat 3 outcome for Behavior/Substance Abuse Re-Admission-30day ($502,511).

Title of Outcome Measure (Improvement Target): IT-4.8 Sepsis mortality

Unique RHP outcome identification number(s): 020950401.3.9

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description

IT-4.8 Sepsis mortality

IT-4.8 Sepsis mortality is the percentage of those patients diagnosed with sepsis, severe sepsis or septic shock and/or an infection and organ dysfunction that expire during hospitalization. Mortality rates are very high in US from sepsis. With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management Bundles we will decrease the mortality rate. . We expect to diagnose and treat 1393 sepsis patients (estimated at DY 1- 148, DY2-222 DY3- 278, DY 4- 347, DY 5-400).

Process Milestones

In DY 2 we will establish baseline rates for sepsis mortality to measure for improvement targets. In DY2 and DY3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. It is expected that the morality rate for this population in DY 2 will initially increase compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure same mortality rates based on same standards of care.

Outcome Improvement Targets for each year

By DY 4 and DY5, the improvement target is Sepsis mortality reduction of 20% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for sepsis mortality as defined by protocol in order to measure improvement in DY 4 and DY 5.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

According to the Center for Disease Control and Prevention (CDC) 2007 statistics, septicemia is the 10th leading cause of death in the United States. Each year mortality from severe sepsis and septic shock nationally have consistently been reported to be over 20-25% for severe sepsis and as high as 70% for septic shock. The outcome target for mortality was selected as evidence based initiatives put in place can reduce mortality. In order to measure the effectiveness of sepsis initiatives mortality rate reduction will be measured.

Outcome Measure Valuation

Medical City Dallas defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 1,393 which was determined based on outcome target for reduction in mortality by 20% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 50. The estimated pricing for morality of $10,000 per life was used. This reflected such considerations a costs for care, lost wages , and quality of life. This totaled approximately $740,000 for 5 years.

The total sepsis population is expected to be positively impacted by the project for a reduction in length of stay of 2 days from baseline average of 10 days per patient. This was estimated at total of reduced in patient days by DY 5 of 888. The estimated cost per day for a sepsis patient is $1,055. This totaled approximately $1,171,050 ($234,040 average per year).

To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for mortality is a 5. We believe this to be the correct number because when a person is positively impacted, mortality will decrease, reducing costs and resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced mortality was $740,000.
To determine the value to each individual positively impacted, we concluded that, on a scale of 1 to 5, the value of this project for reduced length stay is a 3. We believe this to be the correct number because when length of stay is reduced, there is less risk for complications resulting in better health outcomes and improved quality of life. The total value estimated as proportion of reduced length of stay is $702,630.

To determine the value to the community of each individual positively impacted by reduced mortality, we concluded that, on a scale of 1 to 5, the value of this project is a 5. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of mortality reduction at $716,847.
To determine the value to the community of each individual positively impacted by reduced length of stay, we concluded that, on a scale of 1 to 5, the value of this project is a 3. We believe this to be the correct number because when a person is positively impacted, his or her quality of life improves, productivity increases and the burden on society is reduced.
This value was estimated as a proportion of length of stay reduction at $585,525.

The total value of the project then was estimated at $4,656,052. Approximately 80.64% of the total value was assigned to Category 2 project ($3,753,964)and the remaining 9.68% of value assigned to Category 3 outcome for Sepsis Mortality ($451,044) and 9.68% assigned to Category 3 outcome for reduced Average Length of Stay ($451,044).

Title of Outcome Measure (Improvement Target): IT-4.9 Average length of stay

Unique RHP outcome identification number(s): 020943901.3.10

Performing Provider Name/TPI: Medical City Dallas/020943901

Outcome Measure Description

IT- 4.9: Average length of stay is the number days a patient is hospitalized when diagnosed with severe sepsis, septic shock, and/or lactate>4mmol/L (36mg/dl). With earlier diagnosis of sepsis and compliance with Sepsis Resuscitation and Management of care, average length stay should decrease as result. We expect to diagnose and treat 1393 sepsis patients (estimated at DY 1- 148, DY2-222 DY3- 278, DY 4- 347, DY 5-400).

Process Milestones

In DY 2 we will establish baseline rates for sepsis average length of stay to measure for improvement targets. In DY2 and 3 we will conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. It is expected that the average length of stay for this population in DY 2 will initially be different compared to DY 1 due to more patients being correctly diagnosed with new sepsis protocols thus a baseline will be established in DY2 to measure length of stay based on same standards of care.

Outcome Improvement Targets for each year

By DY 4 and DY5, the improvement target is Sepsis average length of stay of 20% by the end of the waiver.

Rationale

The process milestone to establish a baseline rate is necessary to understand the starting point for the average length of stay for patient receiving Sepsis Resuscitation Management Bundle Care in order to measure improvement in DY 4 and DY 5. Typically average length of stay for ICU has been measure but not for the entire hospitalization.

The process milestone selected for conducting Plan Do Study Act (PDSA) will implement a continuous quality improvement model consisting of a logical sequence of four repetitive steps for continuous improvement and learning that will assist in the achievement of improvement targets. By turning ideas into action and connecting action to learning we believe PDSA cycles will facilitate change. The process that can be analyzed and measured with data and compared to predicted results will expedite new changes to be implemented in a disciplined fashion in as necessary repetitive cycle.

The outcome improvement target to reduce length of stay was selected to measure the effectiveness of evidence based care initiatives for sepsis diagnosis and treatment. Average length of stay reduction can also show advancement of sepsis care that is effective through the continuum of the hospital not just in critical care units and comprehensive, coordinated discharge planning.

Outcome Measure Valuation

Medical City Dallas defined the population that will be directly impacted by the project as patients diagnosed with sepsis. There were 2 outcomes for this project, sepsis mortality and average length of stay for sepsis patients. The population expected to be positively impacted by the project for mortality was 1,393 which was determined based on outcome target for reduction in mortality by 20% from baseline by DY 5. This was estimated at total of reduced deaths/lives saved of 50. The estimated pricing for morality of $10,000 per life was used. Title of Outcome Measure (Improvement Target): IT -11.5 All-Cause Admission Rate for Chronically-Ill patients

Unique RHP outcome identification number(s): 020943901.3.11 (Pass 2)
Performing Provider/TPI: Medical City Dallas/020943901

Outcome Measure Description:
The All-Cause Admission Rate for Chronically-Ill patients referred from Medical City Dallas to Metrocrest Family Medical Clinic is intended to measure admission rate for chronically ill medical home patients post enrollment. The rate is arrived at using numerator which is the number of all-cause inpatient admissions in one year by patients in the denominator - and the denominator which is the number of uninsured patients with a chronic disease (diagnosis of Diabetes, CHF, Hypertension, COPD, or Asthma) referred from hospital to Metrocrest Family Medical Clinic who have been enrolled in the medical home program at least one year.

Process Milestones:
By the end of DY2, the All-Cause Admission rate for chronically ill patients' milestone baseline will be established. We estimate that current admission rate is 30%.

Outcome improvement targets:
The admission rate improvement for DY3, DY4 and DY5 will be 5%, 10% and 15% under baseline respectively. At estimated current admission rate of 30%, 450 admission ocur each year. We expect to reduce these admisions by DY3-23, DY4-23 and DY5-24 for a total admission reduction of 70.

Rationale:
As indicated in the Dallas Fort Worth Hospital Council's RHP 9 Community Needs Assessment, an analysis of the emergency department encounters demonstrates that many in the population are accessing emergency departments for both urgent and non-urgent conditions. Emergency room encounters that result in an in-patient admission tend to be more complex in nature and based on the data, the most frequent conditions that lead to admissions were: stroke, congestive heart failure, weak/failing kidneys, heart attack, and chronic bronchitis. There is a correlation between hospitalization for chronically-ill patients and access to primary care. Timely and effective primary care could reduce the risk of hospitalizations due to ambulatory care sensitive conditions. Therefore, the All-Cause Admission rate for MMH patients demonstrates one of the benefits of connecting a patient to a patient centered medical home. As stated by Bindman and others in JAMA (Volume 274:4), "at a community level there is a strong positive association between health care access and preventable hospitalization rates…"

Outcome Measure Valuation:
Medical City Dallas defined the population that will be directly impacted by the project as patients assigned a medical home at the Metrocrest clinic. There were 2 measures used for this project valuation, patient provided a medical home and reduced admissions. The population

expected to be positively impacted by the project for primary care and medical home is 2080 patients by DY 5. Full value was given to new patients estimated assigned to medical home (DY2-180, DY3-228, DY4-274, DY5-329) but only 70% of value was given to patients already clients of clinic (1050). The estimated pricing for medical home was $650 per year per patient. This value was obtained from averages of various PCMH studies (Intermountain Healthcare, Blue Cross Blue Shield, etc.) The value is based on investing in primary care patient centered medical homes resulting in improved quality of care and patient experiences and costs compared to non-PCMH patients and reductions in expensive hospital and emergency department utilization. This totaled approximately $ 3,392,430 for 4 years.
The population expected to be positively impacted by the project for reduction in All –cause admissions 70 admissions by DY 5. The estimated cost for admissions from internal data is $7,100. This totaled approximately $497,000

The remainder of $66,847 for total value was reduced to balance total funding.
The total value of the project then was estimated at $3,822,583. Approximately 78.68% of the total value was assigned to Category 2 project ($3,007,899)and the remaining 21.31%% of value assigned to Category 3 outcome for All Cause Admission ($814,684).

Title of Outcome Measure (Improvement Target): IT-1.11 Diabetes Care: Blood Pressure Control

Unique RHP outcome identification number(s): 126679303.3.1
Performing Provider Name/TPI: Methodist Charlton Medical Center/126679303

Outcome Measure Description

The outcome measure of Diabetes Care: Blood Pressure Poor Control rate will result in a 3% improvement by DY5 of patients in the program with controlled blood pressure. Out of the 1,439 patients expected to be in the program, 25% or 360 are expected to have controlled blood pressure levels. The project seeks to improve this number by 1.5% in DY4 and an additional 1.5% in DY5 of targeted patients in the program with controlled blood pressure. This project will identify patients in the ED patients that are identified as having poor diabetes control. Based on the project's efforts to develop clinical care management criteria, standing orders and education services, these patients will be better prepared to self-manage and control their diabetes conditions. The clinical care management criteria, standing orders and availability of education services will be distributed, communicated and shared with the network of primary care providers and charitable clinics in the service area providing consistent methodology for diabetes care in the market ultimately leading to better diabetes control outcomes. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

IT-1.11 – Diabetes Care: Blood Pressure Control (Stand-alone Measure)

- Rate 1: N/A
- Rate 2: N/A

Process Milestones

- DY2: Please refer to table
    - o
- DY3: Please refer to table

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the US. Approximately 20.8 million Americans have diabetes and half of these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness and kidney failure can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care: HbA1c Poor Control

Unique RHP outcome identification number(s): 126679303.3.2

Performing Provider Name/TPI: Methodist Charlton Medical Center/126679303

Outcome Measure Description

The outcome measure of Diabetes Care: HbA1c Poor Control rate will result in a 3% decrease by DY5 of patients in the program with uncontrolled A1c levels. Out of the 1,439 patients expected to be in the program, 65% or 935 are expected to have uncontrolled A1c levels. The project seeks to decrease this number by 1.5% in DY4 and an additional 1.5% in DY5 of targeted patients in the program with uncontrolled A1c levels. This project will identify patients in the ED patients that are identified as having poor diabetes control. Based on the project's efforts to develop clinical care management criteria, standing orders and education services, these patients will be better prepared to self-manage and control their diabetes conditions. The clinical care management criteria, standing orders and availability of education services will be distributed, communicated and shared with the network of primary care providers and charitable clinics in the service area providing consistent methodology for diabetes care in the market ultimately leading to better diabetes control outcomes. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the US. Approximately 20.8 million Americans have diabetes and half of these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness and kidney failure can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-3.3 Diabetes 30-Day Readmission Rate

Unique RHP outcome identification number(s): 126679303.3.3

Performing Provider Name/TPI: Methodist Charlton Medical Center/126679303

Outcome Measure Description

The outcome measure of diabetic 30-day readmission rate will result in a 10% reduction of the diabetes 30-day readmission rate from the targeted population in DY4 and an additional 10% reduction in DY5 by providing better care sites for frequent users of ED services. The target population in DY4 for the chronic care program is expected to be 1,439 patients. Historically the diabetes readmission rate at the hospital is 5.21%. Therefore, we expect the diabetes 30-day readmission rate among this target population to be 5.21% or 75 patients. In DY4, the goal is to decrease diabetes 30-day readmission to the hospital from this target population by 10% with an additional 10% reduction over DY4 in DY5. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

IT-3.3 – Diabetes 30 Day Readmission Rate

- Rate 1: N/A
- Rate 2: N/A

Process Milestones

- DY2: Please refer to table
    - o
- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table

Rationale

This measure estimates the hospital-level, risk-standardized rate of unplanned, diabetes related readmissions within 30 days of hospital discharge (RSRR) for patients aged 18 and older. The

measure reports a single summary RSRR, derived from the volume-weighted results of five different models, one for each of the following specialty cohorts: surgery, general medicine, cardio-respiratory, cardiovascular and neurology. This measure will indicate the effectiveness of education patients on self-management, providing standing orders, education on chronic disease management and methods for the patient to follow up on the management of their chronic diabetes condition.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-9.2: ED Appropriate Utilization

Unique RHP outcome identification number(s): 126679303.3.4

Performing Provider Name/TPI: Methodist Charlton Medical Center/126679303

Outcome Measure Description

The outcome measure of ED appropriate utilization will result in a 5% decrease in ED utilization of frequent ED users targeted by the program by DY5. By mid-DY2, a project plan will be conducted to identify the patient populations to be targeted with the Patient Navigation program, determine our current capacities, identify needed resource, determine timelines and document implementation plans. Developing and testing data will be completed in DY2 by beginning to provide navigation services. In DY3, we will conduct a Plan Do Study Act (PDSA) improvement cycle based on the initial process results of providing the navigation service. In DY3 we will establish a baseline of how many patients who are most at risk of receiving disconnected and fragmented care can be impacted which is expected to be 3,105. In DY4 and DY5 we will achieve a reduction in ED utilization by frequent ED users targeted by the program by 2.5% in DY4 from DY3 and an additional 2.5% in DY5 from and DY4.

IT-9.2 – ED Appropriate Utilization (Stand-alone Measure)

- Rate 1: N/A
- Rate 2: N/A

Process Milestones

- DY2: Please refer to table

- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table
    - o

Rationale

Our process milestones measure the project planning, plan testing, cycles of improvement and baseline impact rate for which we can reduce in the number of patients that frequently use the ED or are readmitted due to a lack of care in the appropriate location. As a result of these efforts, there will be a reduction in the number of ED visits by frequent ED users targeted in the

program by 5% by DY5. These milestones will measure whether we have increased the number of frequent ED users that are provided navigation services, increased the number of patient navigation resources, and as a result, decreased inappropriate ED utilization.

Outcome Measure Valuation

The process milestones during DY2 and DY3 represent the planning and development of the patient navigation program. Each process milestone is required in order to provide the navigation program. The Improvement Targets in DY4 and DY5 represent the effectiveness of the navigation program. The weighting and valuation methodology considers a slightly higher weight and value to the Improvement Targets in DY4 and DY5, which represents the effectiveness of the program and impact to the frequent users of the ED.

The process milestones during DY2 and DY3 will impact over 30,000 of the ED patients as they are screened and analyzed for potential frequent use and possible patient navigation intervention. The DY4 and DY5 improvement targets each represent a significant improvement to the community and lower costs for frequent users of the ED.

Developing and testing data will be completed in DY2 by beginning to provide navigation services. In DY3, we will conduct a Plan Do Study Act (PDSA) improvement cycle based on the initial process results of providing the navigation service. In DY3 we will establish a baseline of how many patients who are most at risk of receiving disconnected and fragmented care can be impacted which is expected to be 2,600. In DY4 and DY5 we will achieve a reduction in ED utilization by frequent ED users by 2.5% in DY4 from DY3 and an additional 2.5% by DY5 from DY4.

IT-9.2 – ED Appropriate Utilization

- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table
    - o

Rationale

Our process milestones measure the project planning, plan testing, cycles of improvement and baseline impact rate for which we can reduce in the number of patients that frequently use the ED or are readmitted due to a lack of care in the appropriate location. As a result of these efforts, there will be a reduction in the number of ED visits by frequent ED users of 5% by DY5.

These milestones will measure whether we have increased the number of frequent ED users that are provided navigation services, increased the number of patient navigation resources, and as a result, decreased inappropriate ED utilization.

Outcome Measure Valuation

The process milestones during DY2 and DY3 represent the planning and development of the patient navigation program. Each process milestone is required in order to provide the navigation program. The Improvement Targets in DY4 and DY5 represent the effectiveness of the navigation program. The weighting and valuation methodology considers a slightly higher weight and value to the Improvement Targets in DY4 and DY5, which represents the effectiveness of the program and impact to the frequent users of the ED.

The process milestones during DY2 and DY3 will impact over 30,000 of the ED patients as they are screened and analyzed for potential frequent use and possible patient navigation intervention. The DY4 and DY5 improvement targets each represent a significant improvement to the community and lower costs for frequent users of the ED.

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care: HbA1c poor control

Unique RHP outcome identification number(s): 135032405.3.3

Performing Provider Name/TPI: Methodist Dallas Medical Center/135032405

Outcome Measure Description

The outcome measure of Diabetes Care: HbA1c Poor Control rate will result in a 3% decrease by DY5 of patients in the program with uncontrolled A1c levels. Out of the 1,608 patients expected to be in the program, 65% or 1,045 are expected to have uncontrolled A1c levels. The project seeks to decrease this number by 1.5% in DY4 and an additional 1.5% by DY5 of targeted patients in the program with uncontrolled A1c levels. This project will identify patients in the ED patients that are identified as having poor diabetes control. Based on the project's efforts to develop clinical care management criteria, standing orders and education services, these patients will be better prepared to self-manage and control their diabetes conditions. The clinical care management criteria, standing orders and availability of education services will be distributed, communicated and shared with the network of primary care providers and charitable clinics in the service area providing consistent methodology for diabetes care in the market ultimately leading to better diabetes control outcomes. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the US. Approximately 20.8 million Americans have diabetes and half of these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness and kidney failure can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-3.3 Diabetes 30 Day Readmission Rate

Unique RHP outcome identification number(s): 135032405.3.5

Performing Provider Name/TPI: Methodist Dallas Medical Center/135032405

Outcome Measure Description

The outcome measure of diabetic 30-day readmission rate will result in a 10% reduction of the diabetes 30-day readmission rate from the targeted population in DY4 and an additional 10% reduction by DY5 by providing better care sites for frequent users of ED services. The target population in DY4 for the chronic care program is expected to be 1,608 patients. Historically the diabetes readmission rate at the hospital is 8.95% or 142 patients. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

IT-3.3 – Diabetes 30 Day Readmission Rate

- Rate 1: N/A
- Rate 2: N/A

- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table
    - o

Rationale

This measure estimates the hospital-level, risk-standardized rate of unplanned, diabetes related readmissions within 30 days of hospital discharge (RSRR) for patients aged 18 and older. The measure reports a single summary RSRR, derived from the volume-weighted results of five different models, one for each of the following specialty cohorts: surgery, general medicine,

cardio-respiratory, cardiovascular and neurology. This measure will indicate the effectiveness of education patients on self-management, providing standing orders, education on chronic disease management and methods for the patient to follow up on the management of their chronic diabetes condition.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT- 11.5 - Addressing Health Disparities in Minority Populations – All Cause Admission for the Chronically Ill

Unique RHP outcome identifier: 135032405.3.6

Performing Provider Name/TPI: Methodist Dallas Medical Center/ 135032405

Outcome Measure Description

IT-11.5 All-Cause Admission Rate for Chronically-Ill patients

Numerator: Number of all-cause inpatient admissions in one year by patients in the denominator

Denominator: Number of uninsured patients with a chronic disease (diagnosis of Diabetes, CHF, Hypertension, COPD, or Asthma) referred from hospital to Medical Home project who have been enrolled in the Medical Home program at least one year

The All-Cause Admission Rate for Chronically-Ill patients referred from Methodist Dallas Medical Center to "The Medical Home" project is intended to measure admission rate for chronically ill The Medical Home project patients post enrollment. The rate is arrived at using numerator which is the number of all-cause inpatient admissions in one year by patients in the denominator - and the denominator which is the number of uninsured patients with a chronic disease (diagnosis of Diabetes, CHF, Hypertension, COPD, or Asthma) referred from hospital to MMH who have been enrolled in the MMH program at least one year.

By the end of DY2, the All-Cause Admission rate for chronically ill patients' milestone baseline will be established. The admission rate improvement for DY3, DY4 and DY5 will be 5%, 10% and 15% under baseline respectively.

Rationale

As indicated in the Dallas Fort Worth Hospital Council's RHP 9 Community Needs Assessment, an analysis of the emergency department encounters demonstrates that many in the population are accessing emergency departments for both urgent and non-urgent conditions. Emergency room encounters that result in an in-patient admission tend to be more complex in nature and based on the data, the most frequent conditions that lead to admissions were: stroke, congestive heart failure, weak/failing kidneys, heart attack, and chronic bronchitis. There is a correlation between hospitalization for chronically-ill patients and access to primary care. Timely and effective primary care could reduce the risk of hospitalizations due to ambulatory care sensitive conditions. Therefore, the All-Cause Admission rate for The Medical Home project patients demonstrates one of the benefits of connecting a patient to a patient centered medical home. As stated by Bindman and others in JAMA (Volume 274:4), "at a

community level there is a strong positive association between health care access and preventable hospitalization rates, …"

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-3.1 All Cause Readmission Rate

Unique RHP outcome identification number(s): 209345201.3.1

Performing Provider Name/TPI: Methodist Richardson Medical Center/209345201

Outcome Measure Description

The outcome measure of All cause readmission rate will result in a 3% decrease in all cause readmissions from the target population by DY5 by providing better care sites for frequent users of ED services. By mid-DY2, a needs assessment to identify the patient populations to be targeted with the Patient Navigation program will be conducted. Establishment of a health care navigation program to provide support to patient populations who are most at risk of receiving disconnected and fragmented care including program to train the navigators, develop procedures and establish continuing navigation education will be completed by the end of DY2. We will begin to provide care management/navigation services to targeted patients by the end of DY2 by providing one new navigator providing service to the first qualified patient. By the end of DY3 we will provide reports on the types of navigation services provided to patients using the ED as high users or for episodic care. Reduction in all cause readmissions will be achieved with 2.5% reduction in DY4 from DY3 baseline of 111 readmissions and an additional 2.5% in DY5 from and DY4.

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table
    - o

Rationale

Our milestones measure the reduction in the number of patients that frequently use the ED; 1) we are increasing the number of patients identified as frequent users of the ED, 2) increasing the number of patient navigators available to provide services to those patients, and 3) increasing the number of patients referred to more appropriate care settings. As a result of these efforts, there will be a reduction in the number of readmissions from the target population by 5% by DY5. These milestones will measure whether we have increased the number of frequent ED users that are provided navigation services, increased the number of patient navigation resources, and as a result, decreased inappropriate ED utilization.

Outcome Measure Valuation

The process milestones during DY2 and DY3 represent the planning and development of the patient navigation program. Each process milestone is required in order to provide the navigation program. The Improvement Targets in DY4 and DY5 represent the effectiveness of the navigation program. The weighting and valuation methodology considers a slightly higher weight and value to the Improvement Targets in DY4 and DY5, which represents the effectiveness of the program and impact to the frequent users of the ED.

The process milestones during DY2 and DY3 will impact over 30,000 of the ED patients as they are screened and analyzed for potential frequent use and possible patient navigation intervention. The DY4 and DY5 improvement targets each represent a significant improvement to the community and lower costs for frequent users of the ED.

Title of Outcome Measure (Improvement Target): IT-9.2 ED Appropriate Utilization

Unique RHP outcome identification number(s): 209345201.3.2

Performing Provider Name/TPI: Methodist Richardson Medical Center/209345201

Outcome Measure Description

The outcome measure of ED appropriate utilization will result in a 5% decrease in ED utilization of frequent ED users. By mid-DY2, a project plan will be conducted to identify the patient populations to be targeted with the Patient Navigation program, determine our current capacities, identify needed resource, determine timelines and document implementation plans. Developing and testing data will be completed in DY2 by beginning to provide navigation services. In DY3, we will conduct a Plan Do Study Act (PDSA) improvement cycle based on the initial process results of providing the navigation service. In DY3 we will establish a baseline of how many patients who are most at risk of receiving disconnected and fragmented care can be impacted which is expected to be 1,445. In DY4 and DY5 we will achieve a reduction in ED utilization by frequent ED users by 2.5% in DY4 from DY3 and an additional 2.5% in DY5 from DY4.

IT-9.2 – ED Appropriate Utilization (Stand-alone Measure)

- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: : Please refer to table
    - o

Rationale

Our process milestones measure the project planning, plan testing, cycles of improvement and baseline impact rate for which we can reduce in the number of patients that frequently use the ED or are readmitted due to a lack of care in the appropriate location. As a result of these

efforts, there will be a reduction in the number of ED visits by frequent ED users of 5% by DY5. These milestones will measure whether we have increased the number of frequent ED users that are provided navigation services, increased the number of patient navigation resources, and as a result, decreased inappropriate ED utilization.

Outcome Measure Valuation

The process milestones during DY2 and DY3 represent the planning and development of the patient navigation program. Each process milestone is required in order to provide the navigation program. The Improvement Targets in DY4 and DY5 represent the effectiveness of the navigation program. The weighting and valuation methodology considers a slightly higher weight and value to the Improvement Targets in DY4 and DY5, which represents the effectiveness of the program and impact to the frequent users of the ED.

The process milestones during DY2 and DY3 will impact over 30,000 of the ED patients as they are screened and analyzed for potential frequent use and possible patient navigation intervention. Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care: HbA1C Poor Control

Unique RHP outcome identification number(s): 209345201.3.3

Performing Provider Name/TPI: Methodist Richardson Medical Center/209345201

Outcome Measure Description

The outcome measure of Diabetes Care: HbA1c Poor Control rate will result in a 3% decrease by DY5 of patients in the program with uncontrolled A1c levels. Out of the 180 patients expected to be in the program, 65% or 117 are expected to have uncontrolled A1c levels. The project seeks to decrease this number by 1.5% in DY4 and an additional 1.5% in DY5 of targeted patients in the program with uncontrolled A1c levels. This project will identify patients in the ED patients that are identified as having poor diabetes control. Based on the project's efforts to develop clinical care management criteria, standing orders and education services, these patients will be better prepared to self-manage and control their diabetes conditions. The clinical care management criteria, standing orders and availability of education services will be distributed, communicated and shared with the network of primary care providers and charitable clinics in the service area providing consistent methodology for diabetes care in the market ultimately leading to better diabetes control outcomes. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the US. Approximately 20.8 million Americans have diabetes and half of these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness and kidney failure can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-3.3 Diabetes 30 Day Readmission Rate

Unique RHP outcome identification number(s): 209345201.3.5

Performing Provider Name/TPI: Methodist Richardson Medical Center/209345201

Outcome Measure Description

The outcome measure of diabetic 30-day readmission rate will result in a 10% reduction of the diabetes 30-day readmission rate from the targeted population in DY4 and an additional 10% reduction in DY5 by providing better care sites for frequent users of ED services. The target population in DY4 for the chronic care program is expected to be 180 patients. Historically the diabetes readmission rate at the hospital is 6.07% or 11 patients. By mid-DY2, project planning will be conducted by engaging multi-disciplinary stakeholders, identifying current capacity and needed resources. Establishment of baseline rates will provide an opportunity to adjust targets on the number of patients that meet the criteria to receive care under the chronic care model. During DY 3, an effort to disseminate findings and summary of the chronic disease care model and project plan will result in stakeholders having a better knowledge base of the program.

IT-3.3 – Diabetes 30 Day Readmission Rate

- Rate 1: N/A
- Rate 2: N/A

Process Milestones

- DY2: Please refer to table
    - o
- DY3: Please refer to table
    - o

Outcome Improvement Targets for each year

- DY4: Please refer to table
    - o
- DY5: Please refer to table

Rationale

This measure estimates the hospital-level, risk-standardized rate of unplanned, diabetes related readmissions within 30 days of hospital discharge (RSRR) for patients aged 18 and older. The measure reports a single summary RSRR, derived from the volume-weighted results of five different models, one for each of the following specialty cohorts: surgery, general medicine, cardio-respiratory, cardiovascular and neurology. This measure will indicate the effectiveness of education patients on self-management, providing standing orders, education on chronic disease management and methods for the patient to follow up on the management of their chronic diabetes condition.

Outcome Measure Valuation

The valuation methodology for this project is based on a standardized RHP approach. We determine the total population expected to be enrolled in the program. We apply the expected improvement/reduction percentage or number of patients to the population enrolled in the program. That results in the number of individuals impacted by this project. The value for each patient with a positive outcome is based on empirical studies and data collected from various research projects and sources. This number is multiplied by the number of impacted individuals to determine a Healthcare cost/benefit. An Individual impact valuation is determined by applying an "impact" rating (from 1-5) based on potential impact to an individual with a positive outcome, whether it is related to health status, lifestyle, income ability or impact to length of life. This rating multiplied by the Healthcare value determines the Individual Impact value. The same method is used for the Community Impact Valuation. The sum of all three indicates an annual impact value. This is multiplied by the five year term of the project and increased due to inflation. This total five year total is then spread based on the number of milestones associated with the project.

Our rationale for valuing each outcome measure (and its associated process milestones and outcome improvement targets), is based on the following, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, and estimated local funding. The process and improvement milestones are attributed a value based on the above methodology. A "reasonableness" assessment is conducted to compare value based on community/health/individual impact to the potential program costs projected for the project. Any adjustments are made accordingly.

Title of Outcome Measure (Improvement Target): IT-1.2 – Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Unique RHP outcome identification number: 127295703.3.1

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.2 - Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Defined as the percentage of established patients 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Numerator: Established patients from the denominator with at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year

Inclusions: Established patients must meet one of the following criteria to be compliant:

- Code for a lab panel test during measurement year
- Code for serum potassium & code for serum creatinine during measurement year
- Code for serum potassium & code for blood urea nitrogen during measurement year

Note: Tests don't need to occur on same service date, only within measurement year

Denominator: Established patients 18 years of age or older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as patients who received at least 180 treatment days of ambulatory medication during measurement year.

Inclusions: Members 18 years of age and older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as members who received at least 180 treatment days of ambulatory medication during the measure year. Note:

- Patients must have been continuously enrolled during the measurement year.
- Allowable gap: No more than one gap in enrollment of up to 45 days during each year of continuous enrollments (commercial, Medicare). To determine continuous enrollment for a

Medicaid beneficiary for whom enrollment is verified monthly, the patient may not have more than a 1-month gap in coverage.

- Treatment days are the actual number of calendar days covered with prescriptions within the measurement year (i.e., a prescription of 90 days supply dispensed on December 1 of the measurement year counts as 30 treatment days).
- Refer to Table CDC-L in the original measure documentation to identify ACE inhibitors and ARBs. Patients may switch therapy with any medication listed in Table CDC-L during the measurement year and have the days supply for those medication count toward the total 180 treatment days (ie a patient who received 90 days of ACE inhibitors and 90 days of ARBs meet the denominator definition for this measure).

Exclusions: Exclude patients who had an inpatient (acute or non-acute) claim/encounter during the measurement year.

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 85%
        - Improvement Target – Diabetes: 85%
- DY5:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 88%

- Improvement Target – Diabetes: 88%

Rationale

Hypertension and diabetes are two of Parkland's most common diagnoses, resulting in a significant number of patients on chronic medications needing to be monitored to decrease risk of adverse drug events from long-term medication use or misuse of medications. Persistent use of ACE Inhibitors or ARBs warrants monitoring and follow-up by the medical home to assess for side-effects, particularly loss of kidney function, and adjust drug dosage/therapeutic decisions accordingly.[539] The costs of annual monitoring are then offset by the reduction in health care costs associated with complications arising from lack of monitoring and follow-up of patients on long-term medications[540].

Process milestones were chosen to in order to insure processes are in place to successfully monitor progress. Parkland intends to promote care management and the use of the medical home model and chronic care model in all care settings and while Parkland's community-oriented primary care clinics (COPCs) are certified as medical homes under the 2008 guidelines, a readiness assessment and plan must be implemented to meet the updated 2011 guidelines. All Parkland initiatives are focused on balancing the care continuum through increased access and empaneling patients to medical home care teams and also implementing a chronic care model throughout the health system. The focus is to better serve those patients who have chronic conditions and need care teams to assist them to meet their health goals. Elements of the care model through the medical home include monitoring medications, insuring screenings and preventive services are provided and maintaining adequate communication between the care teams and the patient. This outcome is a component of the care model Parkland is implementing across the system.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.2

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

- A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or
- A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 2,500
- DY 5:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 3,000

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[541]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[542]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[543].

Process milestones were chosen to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. This will include using existing relationship between Parkland optometrists and the ophthalmology department of our clinical partner, University of Texas Southwestern Medical School. Retinal scan results will be entered into the patient's EHR record.

In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams, including putting retinal scan compliance in the diabetic registry, at one pilot location. At the end of the year we will compare our rate of scans to our goal, study successes and failures of process and information technology and adjust the system. In DY4 and DY5, we will roll out the system at all sites to insure identified diabetic patients have retinal eye exams. We will also study successes and failures for any potential improvements.

Title of Outcome Measure (Improvement Target): IT-1.20 – Other: Preventive services for children and adolescents (ICSI/AHRQ Measure) - Recommended Adolescent Immunizations

Unique RHP outcome identification number: 127295703.3.3

Performing Provider Name/ TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-12.6: Other Outcome Improvement Target (ICSI/AHRQ Measure): Preventive services for children and adolescents: percentage of patients who by age 13 years were up-to-date with recommended adolescent immunizations: 1) one MCV4 – meningococcal, 2) one Tdap – tetanus, diphtheria toxoids and acellular pertussis vaccine within the last year (NQF Measure)

Numerator: Number of established patients ages 13-17 who received both vaccine doses

Denominator: Number of established patients ages 13-17

Process Milestones:

- DY2
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within the past year. Improvement Target: 75% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

- DY 5:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within the past year. Improvement Target: 80% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

Rationale

The Institute for Clinical Systems Improvement has made these four vaccines part of their Level I recommendations for this age group. The priority aim addressed by this measure is to increase the rate of pediatric patients up-to-date with Level I preventive services, the highest priority of clinical services[544]. The following vaccines are recommended by the American Academy of Pediatrics, the American Academy of Family Medicine, the CDC and AHRQ.

- Tdap vaccine which protects against tetanus, diphtheria and pertussis
- Meningococcal conjugate vaccine, which prevents meningococcal disease (10-14% of invasive meningococcal infections are fatal, and another 11-19% result in long-term disability such as deafness, brain damage, or an amputated arm or leg; the prevalence in of invasive meningococcal disease peaks in infants, with a second peak in adolescents

Parkland sees approximately 5,500, thirteen-year-old patients in its COPC health centers annually. Improvement in the immunization rates for this population will insure the health of our community and in decreasing illness and disability caused by these vaccine preventable conditions.

Process milestones were chosen due to insure capacity and needed resources are addressed to insure prevention measures can be taken. Improvement milestones will measure success of the process milestones.

Title of Outcome Measure (Improvement Target): IT-1.2 – Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Unique RHP outcome identification number: 127295703.3.4

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.2 - Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs). Defined as the percentage of established patients 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Numerator: Established patients from the denominator with at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year

Inclusions: Established patients must meet one of the following criteria to be compliant:

- Code for a lab panel test during measurement year
- Code for serum potassium & code for serum creatinine during measurement year
- Code for serum potassium & code for blood urea nitrogen during measurement year

Note: Tests don't need to occur on same service date, only within measurement year

Denominator: Established patients 18 years of age or older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as patients who received at least 180 treatment days of ambulatory medication during measurement year.
Inclusions: Members 18 years of age and older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as members who received at least 180 treatment days of ambulatory medication during the measure year. Note:

- Patients must have been continuously enrolled during the measurement year.
- Allowable gap: No more than one gap in enrollment of up to 45 days during each year of continuous enrollments (commercial, Medicare). To determine continuous

enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the patient may not have more than a 1-month gap in coverage.

- Treatment days are the actual number of calendar days covered with prescriptions within the measurement year (i.e., a prescription of 90 days supply dispensed on December 1 of the measurement year counts as 30 treatment days).
- Refer to Table CDC-L in the original measure documentation to identify ACE inhibitors and ARBs. Patients may switch therapy with any medication listed in Table CDC-L during the measurement year and have the days supply for those medication count toward the total 180 treatment days (i.e., a patient who received 90 days of ACE inhibitors and 90 days of ARBs meet the denominator definition for measure).

Exclusions: Exclude patients who had an inpatient (acute or non-acute) claim/encounter during the measurement year.

Process Milestones:

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- DY3:
  - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4
  - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
    - Improvement Target – CHF: 85%
    - Improvement Target – Diabetes: 85%
- DY5
  - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)

- Improvement Target – CHF: 88%
- Improvement Target – Diabetes: 88%

Rationale

Hypertension and diabetes are two of Parkland's most common diagnoses, resulting in a significant number of patients on chronic medications needing to be monitored to decrease risk of adverse drug events from long-term medication use or misuse of medications. Persistent use of ACE Inhibitors or ARBs warrants monitoring and follow-up by the medical home to assess for side-effects, particularly loss of kidney function, and adjust drug dosage/therapeutic decisions accordingly.[545] The costs of annual monitoring are then offset by the reduction in health care costs associated with complications arising from lack of monitoring and follow-up of patients on long-term medications[546].

Process milestones were chosen to in order to insure processes are in place to successfully monitor progress. Parkland intends to promote care management and the use of the medical home model and chronic care model in all care settings and while Parkland's community-oriented primary care clinics (COPCs) are certified as medical homes under the 2008 guidelines, a readiness assessment and plan must be implemented to meet the updated 2011 guidelines. All Parkland initiatives are focused on balancing the care continuum through increased access and empaneling patients to medical home care teams and also implementing a chronic care model throughout the health system. The focus is to better serve those patients who have chronic conditions and need care teams to assist them to meet their health goals. Elements of the care model through the medical home include monitoring medications, insuring screenings and preventive services are provided and maintaining adequate communication between the care teams and the patient. This outcome is a component of the care model Parkland is implementing across the system.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.5

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

- A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or
- A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
  - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 2,500
- DY 5:
  - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 3,000

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[547]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[548]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[549].

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. This will include using existing relationship between Parkland optometrists and the ophthalmology department of our clinical partner, University of Texas Southwestern Medical School. Retinal scan results will be entered into the patient's EHR record.

In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams, including putting retinal scan compliance in the diabetic registry, at one pilot location. At the end of the year we will compare our rate of scans to our goal, study successes and failures of process and information technology and adjust the system. In DY4 and DY5, we will roll out the system at all sites to insure identified diabetic patients have retinal eye exams. We will also study successes and failures for any potential improvements.

Title of Outcome Measure (Improvement Target): IT-1.20 – Other: Preventive services for children and adolescents (ICSI/AHRQ Measure) – Recommended Adolescent Immunizations

Unique RHP outcome identification number: 127295703.3.6

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Description

IT-12.6: Other Outcome Improvement Target (ICSI/AHRQ Measure): Preventive services for children and adolescents: percentage of patients who by age 13 years were up-to-date with recommended adolescent immunizations: 1) one MCV4 – meningococcal, 2) one Tdap – tetanus, diphtheria toxoids and acellular pertussis vaccine within the last year (NQF Measure)

Numerator: Number of established patients ages 13-17 who received both vaccine doses

Denominator: Number of established patients ages 13-17

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within past year. Improvement Target: 75% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

- DY 5:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within past year
      Improvement Target: 80% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

Rationale

The Institute for Clinical Systems Improvement has made these four vaccines part of their Level I recommendations for this age group. The priority aim addressed by this measure is to increase the rate of pediatric patients up-to-date with Level I preventive services, the highest priority of clinical services[550]. The following vaccines are recommended by the American Academy of Pediatrics, the American Academy of Family Medicine, the CDC and AHRQ.

- Tdap vaccine which protects against tetanus, diphtheria and pertussis
- Meningococcal conjugate vaccine, which prevents meningococcal disease (10-14% of invasive meningococcal infections are fatal, and another 11-19% result in long-term disability such as deafness, brain damage, or an amputated arm or leg; prevalence of invasive meningococcal disease peaks in infants, with a second peak in adolescents

Parkland sees approximately 5,500, thirteen-year-old patients in its COPC health centers annually. Improvement in the immunization rates for this population will insure the health of our community and in decreasing illness and disability caused by these vaccine preventable conditions.

Process milestones were chosen due to insure capacity and needed resources are addressed to insure prevention measures can be taken. Improvement milestones will measure success of the process milestones.

Title of Outcome Measure (Improvement Target): IT-1.2 – Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Unique RHP outcome identification number: 127295703.3.7

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.2 - Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Defined as the percentage of established patients 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Numerator: Established patients from the denominator with at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year
Inclusions: Established patients must meet one of the following criteria to be compliant:

- Code for a lab panel test during measurement year
- Code for serum potassium & code for serum creatinine during measurement year
- Code for serum potassium & code for blood urea nitrogen during measurement year

Note: Tests don't need to occur on same service date, only within measurement year

Denominator: Established patients 18 years of age or older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as patients who received at least 180 treatment days of ambulatory medication during measurement year.
Inclusions: Members 18 years of age and older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as members who received at least 180 treatment days of ambulatory medication during the measure year. Note:

- Patients must have been continuously enrolled during the measurement year.
- Allowable gap: No more than one gap in enrollment of up to 45 days during each year of continuous enrollments (commercial, Medicare). To determine continuous

enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the patient may not have more than a 1-month gap in coverage.

- Treatment days are the actual number of calendar days covered with prescriptions within the measurement year (i.e., a prescription of 90 days supply dispensed on December 1 of the measurement year counts as 30 treatment days).

- Refer to Table CDC-L in the original measure documentation to identify ACE inhibitors and ARBs. Patients may switch therapy with any medication listed in Table CDC-L during the measurement year and have the days supply for those medication count toward the total 180 treatment days (i.e., a patient who received 90 days of ACE inhibitors and 90 days of ARBs meet denominator definition for this measure).

Exclusions: Exclude patients who had an inpatient (acute or non-acute) claim/encounter during the measurement year.

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 85%
        - Improvement Target – Diabetes: 85%
- DY5
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 88%
        - Improvement Target – Diabetes: 88%

Rationale

Hypertension and diabetes are two of Parkland's most common diagnoses, resulting in a significant number of patients on chronic medications needing to be monitored to decrease risk of adverse drug events from long-term medication use or misuse of medications. Persistent use of ACE Inhibitors or ARBs warrants monitoring and follow-up by the medical home to assess for side-effects, particularly loss of kidney function, and adjust drug dosage/therapeutic decisions accordingly.[551] The costs of annual monitoring are then offset by the reduction in health care costs associated with complications arising from lack of monitoring and follow-up of patients on long-term medications[552].

Process milestones were chosen to in order to insure processes are in place to successfully monitor progress. Parkland intends to promote care management and the use of the medical home model and chronic care model in all care settings and while Parkland's community-oriented primary care clinics (COPCs) are certified as medical homes under the 2008 guidelines, a readiness assessment and plan must be implemented to meet the updated 2011 guidelines. All Parkland initiatives are focused on balancing the care continuum through increased access and empaneling patients to medical home care teams and also implementing a chronic care model throughout the health system. The focus is to better serve those patients who have chronic conditions and need care teams to assist them to meet their health goals. Elements of the care model through the medical home include monitoring medications, insuring screenings and preventive services are provided and maintaining adequate communication between the care teams and the patient. This outcome is a component of the care model Parkland is implementing across the system.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.8

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

a) A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or

b) A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 2,500
- DY 5:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 3,000

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[553]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[554]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[555].

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. This will include using existing relationship between Parkland optometrists and the ophthalmology department of our clinical partner, University of Texas Southwestern Medical School. Retinal scan results will be entered into the patient's EHR record.

In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams, including putting retinal scan compliance in the diabetic registry, at one pilot location. At the end of the year we will compare our rate of scans to our goal, study successes and failures of process and information technology and adjust the system. In DY4 and DY5, we will roll out the system at all sites to insure identified diabetic patients have retinal eye exams. We will also study successes and failures for any potential improvements.

Title of Outcome Measure (Improvement Target): IT-3.3 – Diabetes 30-day Readmission Rate

Unique RHP outcome identification number(s): 127295703.3.9

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-3.3 – Diabetes 30-day Readmission Rate (Standalone Measure)

> **Numerator:** The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission. If an index admission has more than 1 readmission, only first is counted as a readmission.
>
> **Denominator:** The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of diabetes and with a complete claims history for the 12 months prior to admission.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-4: Conduct PDSA cycle to improve data collection & intervention activities
  - P-5: Disseminate findings, including best practices and lessons learned

Outcome Improvement Targets for each year

- DY4:
  - IT-3.2 – Diabetes 30-day Readmission Rate. Improvement target: 9.0%
- DY5:
  - IT-3.2 – Diabetes 30-day Readmission Rate. Improvement target: 8.7%

Rationale

As the Planning Protocol Category 3 restates, the relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay.[556]

[556] Goldfield N, McCullough E, Hughes, Tang A, Eastman B, Rawlins L, Averill R. 2008. "Identifying Potentially Preventable Readmissions." *Health Care Financing Review*. 30:1; pp75 -91.

Parkland intends to conduct performance improvement projects using PI methodologies to improve readmission rates such as All Cause, AMI and Diabetes (CHF readmissions have already been improved significantly). One of the initiatives to improve readmissions is to implement an effective discharge planning process which is another of Parkland's key objectives.

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, and about 7 million of these cases are undiagnosed[557]. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[558].

Work has begun to develop the appropriate clinical protocols and chronic care management model to care for patients with conditions such as diabetes. Several projects are focused on diabetes outcomes to insure that efforts across the continuum are focused. It is important to insure that patients are identified and followed throughout the care process to insure effective chronic care management.

To appropriately understand the causes for readmissions, a plan must be developed, which will be addressed in DY2 with findings disseminated in DY3. In DY2 we will also establish the baseline and in DY3, we will conduct a PDSA cycle. Improvement targets will determine success of interventions.

Process Milestone 1 [P-1]: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation of plan Goal: Develop plan Data Source: Plan, other documentation Process Milestone 1 Estimated Incentive Payment (max amount): $138,908 **Process Milestone 2** [P-2]: Establish baseline rates Goal: Determine baseline Data Source: Peer-reviewed literature, national benchmarks, other documentation Process Milestone 2 Estimated Incentive Payment (max amount): $138,908		**Process Milestone 3** [P-4]: Conduct PDSA cycle Goal: Conduct PDSA cycle Data Source: PDSA cycle documentation Process Milestone 3 Estimated Incentive Payment (max amount): $161,012 **Process Milestone 4** [P-5] Disseminate findings, including best practices and lessons learned Goal: Summarize findings Data Source: Complete plan, report Process Milestone 4 Estimated Incentive Payment (max amount): $161,013	**Outcome Improvement Target 1** [IT-3.3]: Diabetes 30-day Readmissions Rate Improvement Target: Improve diabetes 30-day readmissions rate to 9.0% Baseline: 9.2% (117/1,272 diabetic readmissions) Goal: 9.0% readmissions rate Data Source: EHR, Claims, Benchmark Report, Documentation Outcome Improvement Target 1 Estimated Incentive Payment (max amount): $516,736	**Outcome Improvement Target 2** [IT-3.3]: Diabetes 30-day Readmissions Rate Improvement Target: Improve diabetes 30-day readmissions rate from 9.0% in DY4 to 8.7% Goal: 8.7% readmissions rate Data Source: EHR, Claims, Benchmark Report, Documentation Outcome Improvement Target 2 Estimated Incentive Payment (max amount): $1,235,675
Year 2 Estimated Outcome Amount (and incentive payments amounts form each milestone/outcome improvement target): $277,816		**Year 3 Estimated Outcome Amount:** $322,025	**Year 4 Estimated Outcome Amount:** $516,736	**Year 5 Estimated Outcome Amount:** $1,235,674
TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over Years 2-5): $2,352,251				

Title of Outcome Measure (Improvement Target): IT-9.2 – ED Appropriate Utilization

Unique RHP outcome identification number(s): 127295703.3.10

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-9.2: ED Appropriate Utilization for targeted patients: Specialty Care (Standalone Measure)

- Reduce all ED visits - to the Main Emergency Department for patients presenting with low acuity conditions as measured by an ESI level assignment of 4 or 5

This measure reflects the inappropriate use of scarce and costly health care resources for conditions that could be appropriately seen in a lower cost setting. Reduction of low acuity ED volume will serve as an indicator that the Parkland and RHP 9 waiver projects are achieving transformational performance.

Process Milestones

- DY2:
  - P-1: Project Planning & expansion – conduct needs assessment, develop risk tool, engage stakeholders, identify and establish high risk registry, determine timelines and document implementation plans
  - P-2: Establish baseline rate
- DY3:
  - P-5: Disseminate findings including lessons learned and best practices
  - P-7: Implement strategies to target ED readmissions for identified specialty care

Outcome Improvement Targets for each year

- DY4:
  - IT-9.2: ED Appropriate Utilization. Improvement Target: Reduce the proportion of patients presenting in the Parkland Main ED to 23%
- DY5:
  - IT-9.2: ED Appropriate Utilization. Improvement Target: Reduce the proportion of patients presenting in the Parkland Main ED to 20%

Rationale

Emergency department use for non-emergency care and repeat use for unresolved conditions is neither desirable for the hospital, or the patient. Episodic ED care lacks the benefits from the continuity of care of a primary care physician, and is costly to provide in the acute resource setting of the hospital ED. Nevertheless, hospitals continue to struggle with providing care to increasing numbers of vulnerable adults who use them as their primary source of health care. The development of patient navigation programs have emerged as a means of coordinating fragmented care, identifying gaps in care, and facilitating patient access to appropriate follow-up care settings. As a result, these programs are expected to reduce the number of patients who have had ED re-admissions

Process milestones were chosen due to the lack of current and accurate data reports regarding -ED utilization in relation to specialty care access. To appropriately understand the causes for ED utilization, a gap analysis was developed and appropriate clinic and ED leadership will determine an appropriate plan, establish a baseline and targets to be achieved in DY4 and DY5.

The improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately.

Related Category 1 or 2 Project(s)

Title of Outcome Measure (Improvement Target): IT-1.1 – Third Next Available Appointment – Specialty Care

Unique RHP outcome identification number: 127295703.3.13

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.1 – Third Next Available Appointment (Non-standalone Measure)

Average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Numerator: Continuous variable statement: Average number of days to third next available appointment for an office visit for each clinic and/or department.

Denominator: This measure applies to providers within a reported clinic and/or department

Inclusions: This measure applies to providers* within a reported clinic and/or department**

*Providers:

A. All providers are included. Full-time and part-time providers are included, regardless of the number of hours s/he practices per week.
    1. Providers who truly job share are counted as one provider (i.e., they share one schedule, and/or they work separate day and share coverage of one practice).
    2. When measuring a care team, each member of the care team is counted separately (i.e., MD, NP, PA).
    3. If a provider is practicing in a specialty other than the one which s/he is board certified, the provider should be included in the specialty in which s/he is practicing.
    4. For providers practicing at more than 1 location, measure days to third next available for only the provider's primary location as long as the provider is at that location 51%+ of their time.
    5. New providers who started seeing patients during the reporting period and have an active schedule should be included.
B. Locums are included in the measure only if they are assigned to a specific site for an extended period of time (4+ weeks) & provide continuity care to patient panel
C. Mid-Level providers are included in the measure (NP, PA, CNM).
    1. Mid-Level providers should have continuity practice and their own schedule available to see patients.

D. Resident Providers are to be included if they have an active schedule AND are considered a Primary Care Provider within the organization.
E. Providers with closed practices should be included. They still have to schedule their current patients. It may not be clear when they see new patients again.

**Departments:

1. Primary Care
    a. General Internal Medicine
    b. Family Practice
    c. Pediatrics with the focus on generalists, not specialists
    d. Med/Peds (physicians who see both adults and children)
2. Specialty Care
    a. Obstetrics (Physical exam - New OB visit)

Exclusions:

- Exclude clinicians who do not practice for an extended period of time (greater than 4 weeks) due to maternity leave, sabbatical, family medical leave.
- Mid-Level providers who function only as an "extender," overflow to another practice, or urgent care should not be included.
- Exclude Resident Providers if they are not considered a Primary Care Provider, have an inconsistent schedule, and a restricted patient panel.

Data Collection: Sample all physicians on team the same day of the week, once a week. Count the number of days between a request for an appointment (e.g., enter dummy patient) with a physician and the third next available appointment for a new patient physical, routine exam, or return visit exam. Report the average number of days for all physicians sampled. Note: Count calendar days (e.g. include weekends) and days off. Do not count any saved appointments for urgent visits (since they are "blocked off" on the schedule.) The data collection can be done manually or electronically. Manual collection means looking in the schedule book and counting from the "index" (day when "dummy" appointment is requested) to day of third available appointment. Some electronic scheduling systems can be programmed to compute number of days automatically.

Process Milestones:

- DY2:
    - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
    - P-2: Establish baseline

- P-5: Disseminate findings, including lessons learned and best practices

- DY3:
  - P-7: Implement strategies to improve access to specialty care services

Outcome Improvement Targets:

- DY4:
  - IT-1.1: Third next available appointment. Improvement Targets (in days):
    - Ophthalmology: 147
    - General Surgery: 227
    - Gen Surgery Evaluation: 112
    - Dermatology: 180
- DY5:
  - IT-1.1: Third next available appointment. Improvement Targets (in days):
    - Ophthalmology: 132
    - General Surgery: 205
    - Gen Surgery Evaluation: 101
    - Dermatology: 162

Rationale

Access is a measure of the patient's ability to seek and receive care with the provider of their choice, at the time they choose, regardless of the reason for their visit. Counting the third next available appointment is the healthcare industry's standard measure of access to care and indicates how long a patient waits to be seen. Access to healthcare is important to the quality of healthcare outcomes. Patients who can promptly schedule appointments with their healthcare providers will have higher satisfaction, will likely return to work sooner, and may have better medical outcomes.

Title of Outcome Measure (Improvement Target): IT-9.2 – ED Appropriate Utilization – Specialty Care

Unique RHP outcome identification number(s): 127295703.3.14

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-9.2: ED Appropriate Utilization for targeted patients: Specialty Care – Medicine Clinics (Standalone Measure)

- Reduce ED visits for target conditions for patients who received navigation services
    - Congestive Heart Failure
    - Diabetes
    - End Stage Renal Disease
    - Cardiovascular Disease/Hypertension
    - Behavioral Health/Substance Abuse
    - Chronic Obstructive Pulmonary Disease
    - Asthma

Process Milestones

- DY2:
    - P-1: Project Planning & expansion – conduct needs assessment, develop risk tool, engage stakeholders, identify and establish high risk registry, determine timelines and document implementation plans
    - P-2: Establish baseline rate
- DY3:
    - P-5: Disseminate findings including lessons learned and best practices
    - P-7: Implement strategies to target ED readmissions for identified specialty care

Outcome Improvement Targets for each year

- DY4:
    - IT-9.2: ED Appropriate Utilization. Improvement Target: Reduce number of unnecessary ED visits for those patients receiving specialty services that have been identified for improvement in gap analysis by 10% from baseline

- DY5:
    - IT-9.2: ED Appropriate Utilization. Improvement Target: Reduce number of unnecessary ED visits for those patients receiving specialty services that have been identified for improvement in gap analysis by 15% from baseline

Rationale

Emergency department use for non-emergency care and repeat use for unresolved conditions is neither desirable for the hospital, or the patient. Episodic ED care lacks the benefits from the continuity of care of a primary care physician, and is costly to provide in the acute resource setting of the hospital ED. Nevertheless, hospitals continue to struggle with providing care to increasing numbers of vulnerable adults who use them as their primary source of health care. The development of patient navigation programs have emerged as a means of coordinating fragmented care, identifying gaps in care, and facilitating patient access to appropriate follow-up care settings. As a result, these programs are expected to reduce the number of patients who have had ED re-admissions

Process milestones were chosen due to the lack of current and accurate data reports regarding -ED utilization in relation to specialty care access. To appropriately understand the causes for ED utilization, a gap analysis was developed and appropriate clinic and ED leadership will determine an appropriate plan, establish a baseline and targets to be achieved in DY4 and DY5.

The improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately.

Title of Outcome Measure (Improvement Target): IT-1.2 – Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Unique RHP outcome identification number: 127295703.3.15

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.2 - Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Defined as the percentage of established patients 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Numerator: Established patients from the denominator with at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year

Inclusions: Established patients must meet 1 of the following criteria to be compliant:

- Code for a lab panel test during measurement year
- Code for serum potassium & code for serum creatinine during measurement year
- Code for serum potassium & code for blood urea nitrogen during measurement year

Note: Tests don't need to occur on same service date, only within measurement year

Denominator: Established patients 18 years of age or older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as patients who received at least 180 treatment days of ambulatory medication during measurement year.

Inclusions: Members 18 years of age and older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as members who received at least 180 treatment days of ambulatory medication during the measure year. Note:

- Patients must have been continuously enrolled during the measurement year.

- Allowable gap: No more than one gap in enrollment of up to 45 days during each year of continuous enrollments (commercial, Medicare). To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the patient may not have more than a 1-month gap in coverage.

- Treatment days are the actual number of calendar days covered with prescriptions within the measurement year (i.e., a prescription of 90 days supply dispensed on December 1 of the measurement year counts as 30 treatment days).

- Refer to Table CDC-L in the original measure documentation to identify ACE inhibitors and ARBs. Patients may switch therapy with any medication listed in Table CDC-L during the measurement year and have the days supply for those medication count toward the total 180 treatment days (i.e., a patient who received 90 days of ACE inhibitors and 90 days of ARBs meet the denominator definition for measure).

Exclusions: Exclude patients who had an inpatient (acute or non-acute) claim/encounter during the measurement year.

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 85%
        - Improvement Target – Diabetes: 85%
- DY5:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 88%
        - Improvement Target – Diabetes: 88%

Rationale

Hypertension and diabetes are two of Parkland's most common diagnoses, resulting in a significant number of patients on chronic medications needing to be monitored to decrease risk of adverse drug events from long-term medication use or misuse of medications. Persistent use of ACE Inhibitors or ARBs warrants monitoring and follow-up by the medical home to assess for side-effects, particularly loss of kidney function, and adjust drug dosage/therapeutic decisions accordingly.[559] The costs of annual monitoring are then offset by the reduction in health care costs associated with complications arising from lack of monitoring and follow-up of patients on long-term medications[560].

Process milestones were chosen to in order to insure processes are in place to successfully monitor progress. ~~to insure Parkland's primary care clinics meet the 2011 Medical Home Criteria for certification.~~ Parkland intends to promote care management and the use of the medical home model and chronic care model in all care settings and while Parkland's community-oriented primary care clinics (COPCs) are certified as medical homes under the 2008 guidelines, a readiness assessment and plan must be implemented to meet the updated 2011 guidelines. All Parkland initiatives are focused on balancing the care continuum through increased access and empaneling patients to medical home care teams and also implementing a chronic care model throughout the health system. The focus is to better serve those patients who have chronic conditions and need care teams to assist them to meet their health goals. Elements of the care model through the medical home include monitoring medications, insuring screenings and preventive services are provided and maintaining adequate communication between the care teams and the patient. This outcome is a component of the care model Parkland is implementing across the system.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.16

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

a) A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or

b) A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 2,500
- DY5:
    - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 3,000

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[561]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[562]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[563].

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. This will include using existing relationship between Parkland optometrists and the ophthalmology department of our clinical partner, University of Texas Southwestern Medical School. Retinal scan results will be entered into the patient's EHR record.

In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams, including putting retinal scan compliance in the diabetic registry, at one pilot location. At the end of the year we will compare our rate of scans to our goal, study successes and failures of process and information technology and adjust the system. In DY4 and DY5, we will roll out the system at all sites to insure identified diabetic patients have retinal eye exams. We will also study successes and failures for any potential improvements.

Outcome Measure Valuation

The valuation for Category 1 and 2 projects was completed by using literature, historical provider level data or other evidence based resources. RHP9 Performing Providers defined valuation criteria that were then given weights so that each project could be scored. The score provided a guideline for valuations based on the funding allocation for each Category and 1 and 2 project. The Category 1 and 2 project valuations provided the valuation percentage for Category 3 outcomes as defined by the PFM requirements.

Title of Outcome Measure (Improvement Target): IT-1.20 – Other: Preventive services for children and adolescents (ICSI/AHRQ Measure) – Recommended Adolescent Immunizations

Unique RHP outcome identification number: 127295703.3.17

Performing Provider Name/ TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-12.6: Other Outcome Improvement Target (ICSI/AHRQ Measure): Preventive services for children and adolescents: percentage of patients who by age 13 years were up-to-date with recommended adolescent immunizations: 1) one MCV4 – meningococcal, 2) one Tdap – tetanus, diphtheria toxoids and acellular pertussis vaccine within the last year (NQF Measure)

Numerator: Number of established patients ages 13-17 who received both vaccine doses

Denominator: Number of established patients ages 13-17

Process Milestones:

- DY2
- P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
- P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within the past year. Improvement Target: 75% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

- DY5:
    - IT-12.6: Increase percentage of established pediatric patients age 13 and older who have had the recommended vaccine combination within the past year. Improvement Target: 80% compliance
        - Numerator: Established patients ages 13-17 who have received all four vaccine doses, including receiving the influenza vaccine within past year
        - Denominator: Established patients ages 13-17.

Rationale

The Institute for Clinical Systems Improvement has made these four vaccines part of their Level I recommendations for this age group. The priority aim addressed by this measure is to increase the rate of pediatric patients up-to-date with Level I preventive services, the highest priority of clinical services[564]. The following vaccines are recommended by the American Academy of Pediatrics, the American Academy of Family Medicine, the CDC and AHRQ.

- Tdap vaccine which protects against tetanus, diphtheria and pertussis
- Meningococcal conjugate vaccine, which prevents meningococcal disease (10-14% of invasive meningococcal infections are fatal, and another 11-19% result in long-term disability such as deafness, brain damage, or an amputated arm or leg; in the U.S., the prevalence of invasive meningococcal disease peaks in infants, with a second peak in adolescents

Parkland sees approximately 5,500, thirteen-year-old patients in its COPC health centers annually. Improvement in the immunization rates for this population will insure the health of our community and in decreasing illness and disability caused by these vaccine preventable conditions.

Process milestones were chosen due to insure capacity and needed resources are addressed to insure prevention measures can be taken. Improvement milestones will measure success of the process milestones.

Title of Outcome Measure (Improvement Target): IT-1.2 – Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Unique RHP outcome identification number: 127295703.3.22

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.2 - Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs)

Defined as the percentage of established patients 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Numerator: Established patients from the denominator with at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

Inclusions: Established patients must meet one of the following criteria to be compliant:

- Code for a lab panel test during measurement year
- Code for serum potassium and code for serum creatinine during measurement year
- Code for serum potassium & code for blood urea nitrogen during measurement year

Note: Tests don't need to occur on same service date, only within measurement year

Denominator: Established patients 18 years of age or older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as patients who received at least 180 treatment days of ambulatory medication during measurement year.

Inclusions: Members 18 years of age and older as of December 31 of the measurement year on persistent angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) – defined as members who received at least 180 treatment days of ambulatory medication during the measure year. Note:

- Patients must have been continuously enrolled during the measurement year.

- Allowable gap: No more than one gap in enrollment of up to 45 days during each year of continuous enrollments (commercial, Medicare). To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the patient may not have more than a 1-month gap in coverage.

- Treatment days are the actual number of calendar days covered with prescriptions within the measurement year (i.e., a prescription of 90 days supply dispensed on December 1 of the measurement year counts as 30 treatment days).

- Refer to Table CDC-L in the original measure documentation to identify ACE inhibitors and ARBs. Patients may switch therapy with any medication listed in Table CDC-L during the measurement year and have the days supply for those medication count toward the total 180 treatment days (ie a patient who received 90 days of ACE inhibitors and 90 days of ARBs meet the denominator definition for this measure).

Exclusions: Exclude patients who had an inpatient (acute or non-acute) claim/encounter during the measurement year.

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
    - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 85%
        - Improvement Target – Diabetes: 85%
- DY5:
    - IT-1.2: Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012) – ACE inhibitors or angiotensin receptor blockers (ARBs)
        - Improvement Target – CHF: 88%
        - Improvement Target – Diabetes: 88%

Rationale

Hypertension and diabetes are two of Parkland's most common diagnoses, resulting in a significant number of patients on chronic medications needing to be monitored to decrease risk of adverse drug events from long-term medication use or misuse of medications. Persistent use of ACE Inhibitors or ARBs warrants monitoring and follow-up by the medical home to assess for side-effects, particularly loss of kidney function, and adjust drug dosage/therapeutic decisions accordingly.[565]

The costs of annual monitoring are then offset by the reduction in health care costs associated with complications arising from lack of monitoring and follow-up of patients on long-term medications[566].

Process milestones were chosen to in order to insure processes are in place to successfully monitor progress. Parkland intends to promote care management and the use of the medical home model and chronic care model in all care settings and while Parkland's community-oriented primary care clinics (COPCs) are certified as medical homes under the 2008 guidelines, a readiness assessment and plan must be implemented to meet the updated 2011 guidelines. All Parkland initiatives are focused on balancing the care continuum through increased access and empaneling patients to medical home care teams and also implementing a chronic care model throughout the health system. The focus is to better serve those patients who have chronic conditions and need care teams to assist them to meet their health goals. Elements of the care model through the medical home include monitoring medications, insuring screenings and preventive services are provided and maintaining adequate communication between the care teams and the patient. This outcome is a component of the care model Parkland is implementing across the system.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.23

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

a) A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or

b) A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish a baseline rate among established patients

Outcome Improvement Targets:

- DY4:
  - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 2,500
- DY 5:
  - IT-1.12: Increase number of COPC patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 3,000

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[567]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[568]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[569].

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. This will include using existing relationship between Parkland optometrists and the ophthalmology department of our clinical partner, University of Texas Southwestern Medical School. Retinal scan results will be entered into the patient's EHR record.

In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams, including putting retinal scan compliance in the diabetic registry, at one pilot location. At the end of the year we will compare our rate of scans to our goal, study successes and failures of process and information technology and adjust the system. In DY4 and DY5, we will roll out the system at all sites to insure identified diabetic patients have retinal eye exams. We will also study successes and failures for any potential improvements.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD *(add outcome amounts over DYs 2-5)**:*** $2,675,109				

Title of Outcome Measure (Improvement Target): IT-3.3 – Diabetes 30-day Readmission Rate

Unique RHP outcome identification number(s): 127295703.3.24

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-3.3 – Diabetes 30-day Readmission Rate (Standalone Measure)

Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of diabetes and with a complete claims history for the 12 months prior to admission.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-4: Conduct PDSA cycle to improve data collection and intervention activities
  - P-5: Disseminate findings, including best practices and lessons learned

Outcome Improvement Targets for each year

- DY4:
  - IT-3.2: Diabetes 30-day Readmission Rate. Improvement target: 9.0%
- DY5:
  - IT-3.2: Diabetes 30-day Readmission Rate. Improvement target: 8.7%

Rationale

As the Planning Protocol Category 3 restates, the relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay.[570]

Parkland intends to conduct performance improvement projects using PI methodologies to improve readmission rates such as All Cause, AMI and Diabetes (CHF readmissions have already been improved significantly). One of the initiatives to improve readmissions is to implement an effective discharge planning process which is another of Parkland's key objectives.

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, and about 7 million of these cases are undiagnosed[571]. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[572].

Parkland has done some preliminary work on identifying those patients with chronic diseases/conditions, specifically diabetes, who may be bouncing around the health care system without any focused effort in directed and effective delivery of health care. Work has begun to develop the appropriate clinical protocols and chronic care management model to care for patients with conditions such as diabetes. Several projects are focused on diabetes outcomes to insure that efforts across the continuum are focused. It is important to insure that patients are identified and followed throughout the care process to insure effective care management.

To appropriately understand the causes for readmissions, a plan must be developed, which will be addressed in DY2 with findings disseminated in DY3. In DY2 we will also establish the baseline and in DY3, we will conduct a PDSA cycle. Improvement targets will determine success of interventions.

Title of Outcome Measure (Improvement Target): IT-5.1 – Improved Cost Savings
(demonstrate cost savings in care delivery)

Unique RHP outcome identification number(s): 127295703.3.25

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-5.1: Improved Cost savings (Standalone for Project Option 5)

Cost Benefit Analysis will be used to analyze the direct and indirect costs and benefits of implementing a new program at Parkland Health & Hospital System. The measure will be the reduction in costs due to implementing the program or the improvement in cost savings.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-7: Conduct cost benefit analysis
- DY3:
  - P-7: Determine plan of action with time line/milestones
  - P-2: Establish baseline

Outcome Improvement Targets for each year

- DY4:
  - IT-5.1: Improved Cost savings: Using the Cost Minimization analysis, achieve a system-wide reduction in cost associated with the pilot project of at least .5% (equates to approximately $5 million impact on direct medical costs)
- DY5:
  - IT-5.1: Improved Cost savings: Using the Cost Minimization analysis, sustain a system-wide reduction in cost associated with the pilot project of at least .5% (equates to approximately $5 million impact on direct medical costs)

Rationale

Cost savings can be demonstrated in a health care environment by assigning a monetary value to all aspects of a health care system. The monetary value depends on the direct or indirect cost of health care. Cost benefit analysis is used to summarize the cost and benefits of programs in a health care system to establish if it is effective in providing quality care delivery

to the patient. The costs and benefits are usually monitored over time and need to be adjusted to the same time frame for the analysis. This type of analysis has been widely applied within the health care industry. One example is the potential savings of effectively implementing an electronic medical record (EMR) system.[573] The cost of a project is important to understand the risk of continuing to support a program in a health care system. The cost benefit analysis would identify the opportunities to reduce the cost of care. A reduction in the cost of care would increase efficiency at Parkland and allow more resources to be used to benefit the patient population.

Title of Outcome Measure (Improvement Target): IT-5.2 – Per Episode Cost of Care

Unique RHP outcome identification number(s): 127295703.3.26

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-5.2: Per Episode Cost of Care (Standalone for Project Option 5)

Cost Benefit Analysis will be used to analyze the direct and indirect costs and benefits of implementing a new program at Parkland Health & Hospital System. The measure will be the reduction in costs due to implementing the program or the improvement in cost savings.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-7: Conduct cost benefit analysis
- DY3:
  - P-7: Determine plan of action with timeline/milestones
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year

- DY4:
  - IT-5.1:Improved Cost savings: Evaluate the pre- and post- cost per episode of care the target population in the pilot and achieve cost saving of at least 10%
- DY5:
  - IT-5.1:Improved Cost savings: Evaluate the pre- and post- cost per episode of care the target population in the pilot and sustain cost saving of at least 10%
  - Improvement target: Reduction of 10% from baseline established in DY3

Rationale

Cost savings can be demonstrated in a health care environment by assigning a monetary value to all aspects of a health care system. The monetary value depends on the direct or indirect cost of health care. Cost benefit analysis is used to summarize the cost and benefits of programs in a health care system to establish if it is effective in providing quality care delivery to the patient. The costs and benefits are usually monitored over time and need to be adjusted

to the same time frame for the analysis. This type of analysis has been widely applied within the health care industry. One example is the potential savings of effectively implementing an electronic medical record (EMR) system.[574] The cost of a project is important to understand the risk of continuing to support a program in a health care system. The cost benefit analysis would identify the opportunities to reduce the cost of care. A reduction in the cost of care would increase efficiency at Parkland and allow more resources to be used to benefit the patient population.

Title of Outcome Measure (Improvement Target): IT-4.2 – Central Line-Associated Bloodstream Infection (CLABSI) Rate

Unique RHP outcome identification number(s): 127295703.3.27

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-4.2 – Central Line-Associated Bloodstream Infection (CLABSI) Rate (Standalone Measure)

Numerator: Number of cases of CLABSI as designated by IQR criteria

Data Source: Claims, EHR, IQR/NHSN Data

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-5: Disseminate findings, including best practices and lessons learned
  - P-7: Implement strategies

Outcome Improvement Targets for each year

- DY4:
  - IT-4.2: Central Line Associated Bloodstream Infection Rate. Improvement Target: Reduce CLABSI rate by 25% from DY3
- DY5:
  - IT-4.2: Central Line-Associated Bloodstream Infection Rate. Improvement Target: Reduce CLABSI rate an additional 25% from DY4

Rationale

An estimated 41,000 central line-associated bloodstream infections (CLABSI) occur in U.S. hospitals each year. These infections are usually serious infections typically causing a prolongation of hospital stay and increased cost and risk of mortality. CLABSI can be prevented through proper management of the central line. These techniques are addressed in the CDC's Healthcare Infection Control Practices Advisory Committee

(CDC/HIPAC) *Guidelines for the Prevention of Intravascular Catheter-Related Infections, 2011*.
The reduction of central line-associated bloodstream infections (CLABSI) at Parkland will increase the efficiency of the hospital and the health of the patient population. The current Adult ICU Total for FY2012, from October 2011 to June 2012, is 10 CALBSI within 6916 line days that indicates a 1.4 rate per 1000 line days. The previous rate per 1000 line days in FY2011 was 2.0. A small reduction in this low rate will indicate a large improvement at Parkland.[575]

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to implement appropriate protocol-driven approaches and prevention strategies. The improvement targets were chosen to insure progress of process milestones and to insure alignment with national benchmarks.

Title of Outcome Measure (Improvement Target): IT-4.3 – Catheter- Associated Urinary Tract Infection (CAUTI) Rate

Unique RHP outcome identification number(s): 127295703.3.28

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-4.3 – Catheter-Associated Urinary Tract Infection (Standalone Measure)

Numerator: Number of cases of CAUTI as designated by IQR criteria

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-5: Disseminate findings, including best practices and lessons learned
  - P-7: Implement strategies

Outcome Improvement Targets for each year

- DY4:
  - IT-4.2: Catheter-Associated Urinary Tract Infection. Improvement Target: Improve CAUTI rate by 25% from DY3
- DY5:
  - IT-4.2: Catheter-Associated Urinary Tract Infection. Improvement Target: Improve CAUTI rate an additional 25% from DY4

Rationale

According to the Centers for Disease Control (CDC), CAUTI infections account for more than 30% of infections reported by acute care hospitals and approximately 80% of healthcare-associated urinary tract infections (UTIs) are caused by instrumentation of the urinary tract.

CAUTIs can lead to such complications as cystitis, pyelonephritis, gram-negative bacteremia, prostatitis, epididymitis, and orchitis in males and, less commonly, endocarditis, vertebral osteomyelitis, septic arthritis, endophthalmitis, and meningitis in all patients. Complications

associated with CAUTI cause discomfort to the patient, prolonged hospital stay, and increased cost and mortality. Each year, more than 13,000 deaths are associated with UTIs.

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to implement appropriate protocol-driven approaches and prevention strategies. The improvement targets were chosen to insure progress of process milestones and to insure alignment with national benchmarks.

Title of Outcome Measure (Improvement Target): IT-4.4 – Surgical Site Infection (SSI) Rate

Unique RHP outcome identification number(s): 127295703.3.29

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-4.4 – Surgical Site Infection (SSI) Rate (Standalone Measure)

Numerator: Number of cases of SSI as designated by IQR criteria

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates

- DY3:
  - P-5: Disseminate findings, including best practices and lessons learned
  - P-7: Implement strategies

Outcome Improvement Targets for each year

- DY4:
  - IT-4.2: Surgical Site Infection Rate. Improvement Target: Improve SSI rate by 10%

- DY5:
  - IT-4.2: Surgical Site Infection Rate. Improvement Target: Improve SSI rate an additional 10% from DY4

Rationale

According to the CDC, while advances have been made in infection control practices, including improved operating room ventilation, sterilization methods, barriers, surgical technique, and availability of antimicrobial prophylaxis, SSIs remain a substantial cause of morbidity and mortality among hospitalized patients. In one study, among nearly 100,000 HAIs reported in one year, deaths were associated with SSIs in more than 8,000 cases.

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to implement appropriate protocol-driven approaches and prevention strategies. The improvement targets were chosen to insure progress of process milestones and to insure alignment with national benchmarks.

Outcome Measure Valuation

The valuation for Category 1 and 2 projects was completed by using literature, historical provider level data or other evidence based resources. RHP9 Performing Providers defined valuation criteria that were then given weights so that each project could be scored. The score provided a guideline for valuations based on the funding allocation for each Category and 1 and 2 project. The Category 1 and 2 project valuations provided the valuation percentage for Category 3 outcomes as defined by the PFM requirements.

Title of Outcome Measure (Improvement Target): IT-3.1 – All Cause 30-day Readmission Rate

Unique RHP outcome identification number(s): 127295703.3.30

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-3.1 – All Cause 30-day Readmission Rate (NQF 1789) (Standalone Measure)

> **Numerator:** The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned
>
> **Denominator:** This claims-based measure can be used in either of two patient cohorts: (1) admissions to acute care facilities for patients aged 65 years or older or (2) admissions to acute care facilities for patients aged 18 years or older. We have tested the measure in both age groups.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-4: Conduct PDSA cycle to improve data collection and intervention activities
  - P-5: Disseminate findings, including best practices and lessons learned

Outcome Improvement Targets for each year

- DY4:
  - IT-3.1: All Cause 30-Day Readmission Rate. Improvement target: 8.6%
- DY5:
  - IT-3.1: All Cause 30-Day Readmission Rate. Improvement target: 8.5%

Rationale

As the Planning Protocol Category 3 restates, the relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that

readmissions may result from circumstances surrounding the initial hospital stay.[576] Additionally, hospital readmissions in many cases are preventable. According to a 2009 study, nearly 20% of Medicare beneficiaries are re-hospitalized within 30 days after discharge, at an annual cost of $17 billion.[577] Causes of avoidable readmissions include hospital-acquired infections and complications; premature discharge; failure to coordinate and reconcile medications; inadequate communication among hospital personnel, patients, caregivers, and community-based clinicians; and poor planning for care transitions.

Parkland intends to conduct performance improvement projects using PI methodologies to improve readmission rates such as All Cause, AMI and Diabetes (CHF readmissions have already been improved significantly). One of the initiatives to improve readmissions is to implement an effective discharge planning process which is another of Parkland's key objectives.

Parkland has done some preliminary work on identifying those patients with chronic diseases/conditions who may be bouncing around the health care system without any focused effort in directed and effective delivery of health care. Work has begun to develop the appropriate clinical protocols and chronic care management model to care for patients with chronic conditions.

To appropriately understand the causes for readmissions, a plan must be developed, which will be addressed in DY2 with findings disseminated in DY3. In DY2 we will also establish the baseline and in DY3, we will conduct a PDSA cycle.

Improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately and to insure findings are reported and shared across the organization and throughout the region.

Title of Outcome Measure (Improvement Target): IT-13.3 – Palliative Care: Proportion of patients with more than one ED visit in the last days of life

Unique RHP outcome identification number(s): 127295703.3.33

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-13.3 - Percentage of patients with more than one ED visit in the last days of life (NQF 0211) (Standalone Measure)

Numerator: Number of patients who died from cancer and had >1 ER visit in the last 30 days of life

Denominator: Number of patients who died from cancer

Process Milestones:

- DY2:
  - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline
- DY3:
  - P-5: Disseminate findings, including lessons learned and best practices
  - P-7: Implement strategies

Outcome Improvement Targets

- DY4:
  - IT-13.3: Percentage of patients with more than one ED visit in the last days of life. Improvement Target: 5% reduction from baseline set at end DY3
- DY5:
  - IT-13.3: Percentage of patients with more than one ED visit in the last days of life. Improvement Target: 5% reduction from baseline set at end of DY4

Rationale

Studies have shown that patients with life-threatening illness experience hospitalizations with longer than necessary lengths of stay and experience low-yield and costly medical treatments,

leading to lower patient and family satisfaction.[578] Palliative care programs have not only been proven to be more cost-effective for hospitals, but they have also proven to give patients nearing end-of-life a more patient and family-centered experience. Patients without such a program may seek care/comfort in the ED and eventually the ICU. For those experiencing end-of-life, neither of those is an acceptable choice. Initial back-of-the-envelope calculations show potential for a small 20-25 bed unit for palliative care. This waiver project will give Parkland an opportunity to pursue implementation of such a program.

Process milestones were chosen due to the lack of current and accurate data reports regarding readmissions indicators. To appropriately understand the causes for readmissions, a plan must be developed, which will be addressed in DY2-DY3. In DY3 we will establish the baseline and conduct a Plan Do Study Act (PDSA) cycle to improve the readmission rate and then disseminate findings as appropriate.

The improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately.

Title of Outcome Measure (Improvement Target): IT-6.1 – Patient Satisfaction

Unique RHP outcome identification number(s): 127295703.3.37

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-6.1 Percent improvement over baseline of inpatient satisfaction scores (all questions within a survey need to be answered to be a standalone measure)
Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement in a specific tool.

Numerator: Percent improvement in targeted patient satisfaction domain. Specific to this project: Number patients rating hospital 9 or 10 out of 10 on the "Overall Rating" HCAHPS question.

Denominator: Number of patients who were administered the survey. Specific to this project: Total number patients answering the "Overall Rating" HCAHPS question.

Process Milestones

- DY2:
    - P-1: Project Planning – Develop establish, recruit and fill a new position of Service Excellence Manager to centralize, coordinate, monitor, and lead service excellence initiatives.
- DY3:
    - P-4: Conduct performance improvement activities modeled after the Plan, Do, Check, Act (PDSA) improvement cycle process and "lessons learned" models to ensure continuous quality improvement of data collection, intervention activities, and learning materials.
    - P-5: Disseminate findings, including lessons learned and best practices to stakeholders

Outcome Improvement Targets for each year

- DY4:

- Three percentage point improvement in percentage of patients rating 9 or 10 out of 10 on the HCAHPS "Overall Rating" question over baseline.

- DY5:

  - Additional three percentage point improvement in percentage of patients rating 9 or 10 out of 10 on the HCAHPS "Overall Rating" question over DY4.

By the end of waiver in DY5, we will increase customer service excellence as measured by an overall six percentage point increase on the HCAHPS "Overall Rating" from the baseline reporting year of April 2011 through Mar 2012 (combined Outcome Improvement Targets 1 and 2). The six percentage point overall increase would be enough to bring Parkland scores in line with the April 2011 through Mar 2012 national average as reported by CMS preliminary estimates and would be above the VBP threshold for adjusted scores reported by CMS Final Rule in April 2011.

Rationale

"The intent of the HCAHPS initiative is to provide a standardized survey instrument and data collection methodology for measuring patients' perspectives on hospital care. While many hospitals have collected information on patient satisfaction, prior to HCAHPS there was no national standard for collecting or publicly reporting patients' perspectives of care information that would enable valid comparisons to be made across all hospitals. In order to make "apples to apples" comparisons to support consumer choice, it was necessary to introduce a standard measurement approach: the HCAHPS survey, which is also known as the CAHPS® Hospital Survey, or Hospital CAHPS. HCAHPS is a core set of questions that can be combined with a broader, customized set of hospital-specific items. HCAHPS survey items complement the data hospitals currently collect to support improvements in internal customer services and quality related activities."[581]

2 project. The Category 1 and 2 project valuations provided the valuation percentage for Category 3 outcomes as defined by the PFM requirements.

Patient satisfaction has been previously linked in the literature to a number of outcomes for patients and organizations both medical and financial. Better patient satisfaction has been associated with reduced risk of medical malpractice lawsuits. In one study patients in the bottom third of the Press Ganey benchmarks were 110 times more likely to experience malpractice law suits than those in the top third (Stelfox, Gandhi, Orav & Gustafson, 2005)—Parkland inpatient satisfaction scores have been consistently in the bottom third of Press Ganey's benchmarks. Law suits have also been shown to be significantly related to number of patient complaints (Press Ganey 2007). Service recovery and improved satisfaction scores can be expected to mitigate liability exposure, while better patient satisfaction has been shown to increase revenue. One study of physician practices determined that a 5% dissatisfaction rate equated to a $150,000 loss per physician in revenue (Drain & Kaldenberg, 1999). In 2006, malpractice payments averaged $308,593 (Kaiser Family Foundation 2007) per claim, largely due to poor communication between patients and physicians not negligence (23% of claims result from negligence; Phillips et.al. 2004)

Further studies indicate that improved patient satisfaction scores are associated with improved physician productivity and substantial declines in physician turnover. Improved patient satisfaction has been repeatedly associated with financial ROI (return on investment). All studies indicate increases in net operating margins with improved patient satisfaction, especially among those at the top deciles (Press Ganey 2010). Conversely, numerous studies report that satisfied patients cost less to care for because they use fewer resources and experience fewer stress complications. For example Duke Children's hospital increased patient and employee satisfaction yielded an average $4,389 reduction in cost per case (Meliones 2000), while Baptist Health System achieved and average reduction of $1,154 (Jackson, Sistrunk, & Staman, 2003). Moreover Baptist Health System, with an increased focus on patient satisfaction, experienced a length of stay drop of 1.3 days (Jackson, Sistrunk, & Staman, 2003). Overall, patients who are satisfied with their care do not complain as much, do not want to sue, have fewer complications, and are associated with improved staff and physician engagement. Given the financial impacts of improving patient satisfaction based on the above studies, this project may potentially return a cost savings to the organization of between $167,971,624 and $638,845,284 over four years (36389 inpatients per year*$1,154 or $4,389*4 years). Either amount of which is potentially well in excess of the $24,776,800 valuation, even without the potential reductions in malpractice lawsuit awards.

Title of Outcome Measure (Improvement Target): IT-3.1 – All Cause 30-day Readmission Rate

Unique RHP outcome identification number(s): 127295703.3.38

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-3.1 – All Cause 30-day Readmission Rate for those Patients (Standalone Measure)

> **Numerator:** The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned
>
> **Denominator:** This claims-based measure can be used in either of two patient cohorts: (1) admissions to acute care facilities for patients aged 65 years or older or (2) admissions to acute care facilities for patients aged 18 years or older. We have tested the measure in both age groups.

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rate
- DY3:
  - P-4: Conduct PDSA cycle
  - P-5: Disseminate findings, including best practices and lessons learned

Outcome Improvement Targets for each year

- DY4:
  - IT-3.12: All Cause 30-Day Readmission Rate. Improvement Target: 8.6%
- DY5:
  - IT-3.12: All Cause 30-Day Readmission Rate. Improvement Target: 8.5%

Rationale

As the Planning Protocol Category 3 states, the relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions

may result from circumstances surrounding the initial hospital stay.[582] Additionally, hospital readmissions in many cases are preventable. According to a 2009 study, nearly 20% of Medicare beneficiaries are re-hospitalized within 30 days after discharge, at an annual cost of $17 billion.[583] Causes of avoidable readmissions include hospital-acquired infections and other complications; premature discharge; failure to coordinate and reconcile medications; inadequate communication among hospital personnel, patients, caregivers, and community-based clinicians; and poor planning for care transitions.

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to expand the program such that outcomes are improved and also to review opportunities to identify alternative and innovative ways to insure patients receive the post-acute care services they need regardless of their means to pay for such services.

The improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately and to insure findings are reported and shared across the organization as well as throughout the region.

Related Category 1 or 2 Project

Title of Outcome Measure (Improvement Target): IT-6.1 – Percent improvement over baseline for Patient Satisfaction Scores (related to how well providers communicate)

Unique RHP outcome identification number: 127295703.3.39

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-6.1 Percent improvement over baseline of inpatient satisfaction scores (all questions within a survey need to be answered to be a standalone measure)

Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement: how well their doctors communicate; ***(Standalone measure)***

Numerator: Percent improvement in targeted patient satisfaction domain

Denominator: Number of patients who were administered the survey. Specific to this project: Total number patients answering the questions related to communication with clinicians (nurses/physicians).

Process Milestones:

- DY 2:
    - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
    - P-2: Identify baseline
- DY 3:
    - P-5: Disseminate findings including lessons learned and best practices
    - P-7: Implement strategies

Outcome Improvement Targets:

- DY4: IT-6.1 – Percent improvement over baselines of patient satisfaction scores. Improvement targets include responses to the following questions:
    - Nurses explained in a way patient could understand ALWAYS: 78%
    - Physicians explained in a way patient could understand ALWAYS: 85%

- DY 5: IT- Percent improvement over baselines of patient satisfaction scores. Improvement Targets include responses to the following questions:
    - Nurses explained in a way patient could understand ALWAYS: 85%
    - Physicians explained in a way patient could understand ALWAYS: 90%

Rationale

It is the intention to improve health literacy for our patients. Parkland's population (290,000 patients annually) includes more than 53% Hispanic patients of which 39% state their primary language is Spanish. Based on the most recent patient satisfaction survey results, only 69.1% felt nurses explained things in a way they could understand and 76.5% felt their physicians always explained things in a way they understood. Patients who do not understand their care/treatment are less likely to have better outcomes for their care. If communication can be improved, it is more likely that treatment/medication regiments will be followed and will improve the health of the patient.

More than 30% of Parkland's current population does not feel they understand their care/treatment through provider communication. Implementing a Health Care Literate Model can improve patient satisfaction as well as adherence to treatment potentially reducing unnecessary utilization of ED and other services.

Title of Outcome Measure (Improvement Target): IT-1.1 – Third Next Available Appointment – Family Medicine Clinic

Unique RHP outcome identification number: 127295703.3.40

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.1 – Third Next Available Appointment (Non-standalone Measure)

Average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Numerator: Continuous variable statement: Average number of days to third next available appointment for an office visit for each clinic and/or department.

Denominator: This measure applies to providers within a reported clinic and/or department

Inclusions: This measure applies to providers* within a reported clinic and/or department**

*Providers:

A. All providers are included. Full-time and part-time providers are included, regardless of the number of hours s/he practices per week.
    1. Providers who job share are counted as one (ie they share one schedule, and/or they work separate day & share coverage of one practice).
    2. When measuring a care team, each member of the care team is counted separately (i.e., MD, NP, PA).
    3. If a provider is practicing in a specialty other than the one which s/he is board certified, the provider should be included in the specialty in which s/he is practicing.
    4. For providers practicing at more than 1 location, measure days to third next available for only the provider's primary location as long as the provider is at that location 51%+ of their time.
    5. New providers who started seeing patients during the reporting period and have an active schedule should be included.
B. Locums are included in the measure only if they are assigned to a specific site for an extended period of time (4+ weeks) & provide continuity care to patient panel
C. Mid-Level providers are included in the measure (NP, PA, CNM).
    6. Mid-Level providers should have continuity practice and their own schedule available to see patients.

D. Resident Providers are to be included if they have an active schedule AND are considered a Primary Care Provider within the organization.
E. Providers with closed practices should be included. They still have to schedule their current patients. In addition, it may not be clear when they start seeing new patients again.

**Departments:

3. Primary Care
    a. General Internal Medicine
    b. Family Practice
    c. Pediatrics with the focus on generalists, not specialists
    d. Med/Peds (physicians who see both adults and children)
4. Specialty Care
    a. Obstetrics (Physical exam - New OB visit)

Exclusions:

- Exclude clinicians who do not practice for an extended period of time (greater than 4 weeks) due to maternity leave, sabbatical, family medical leave.
- Mid-Level providers who function only as an "extender," overflow to another practice, or urgent care should not be included.
- Exclude Resident Providers if they are not considered a Primary Care Provider, have an inconsistent schedule, and a restricted patient panel.

Data Collection: Sample all physicians on team the same day of the week, once a week. Count the number of days between a request for an appointment (e.g., enter dummy patient) with a physician and the third next available appointment for a new patient physical, routine exam, or return visit exam. Report the average number of days for all physicians sampled. Note: Count calendar days (e.g. include weekends) and days off. Do not count any saved appointments for urgent visits (since they are "blocked off" on the schedule.) The data collection can be done manually or electronically. Manual collection means looking in the schedule book and counting from the "index" (day when "dummy" appointment is requested) to day of third available appointment. Some electronic scheduling systems can be programmed to compute number of days automatically.

Process Milestones:

- DY2:
    - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

- P-2: Establish baseline

- DY3:
  - P-5: Disseminate findings, including lessons learned and best practices
  - P-7: Implement strategies to improve access to Family Medicine

Outcome Improvement Targets:

- DY4:
  - IT-1.1: Third next available appointment. Improvement Target: 22 days
- DY5:
  - IT-1.1: Third next available appointment. Improvement Target: 20 days

Rationale

Access is a measure of the patient's ability to seek and receive care with the provider of their choice, at the time they choose, regardless of the reason for their visit. Counting the third next available appointment is the healthcare industry's standard measure of access to care and indicates how long a patient waits to be seen. Access to healthcare is important to the quality of healthcare outcomes. Patients who can promptly schedule appointments with their healthcare providers will have higher satisfaction, will likely return to work sooner, and may have better medical outcomes.

Title of Outcome Measure (Improvement Target): IT-1.12 – Diabetes Care: Retinal Eye Exam

Unique RHP outcome identification number: 127295703.3.41

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-1.12 - Diabetes Care: Retinal Eye Exam (NQF 0055) (Non-standalone Measure)

Numerator: An eye screening for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

a) A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year, or

b) A negative retinal exam (no evidence of retinopathy) by an eye care professional in the year prior to the measurement year

Denominator: Members 18 to 75 year of age as of December 31 of the measurement year with diabetes (type 1 or type 2)

Process Milestones:

- DY2:
    - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
    - P-2: Establish a baseline rate
- DY3:
    - P-7: Implement intervention to provide retinal scans

Outcome Improvement Targets:

- DY4:
    - IT-1.12: Increase percentage of Family Medicine and Primary Care Internal Medicine (PCIM) patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 60%

- DY 5:
    - IT-1.12: Increase percentage of Family Medicine and Primary Care Internal Medicine (PCIM) patients with diabetes had a retinal exam in the recommended time-frame. Improvement Target: 80%

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[584]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[585]. Diabetic retinopathy, one of the leading causes of blindness in adults, can be treated if detected and addressed in the early stages[586].

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. In DY2, we will complete the process currently under way of installing retinal scan cameras and training clinicians in their use. In DY3, we will use current data to establish a baseline from which to set goals for DY3, DY4 and DY5. Once the retinal scan cameras and the necessary clinical teams are in place and trained, we will begin routine use of the retinal cameras for diabetic eye exams. We will also study successes and failures for any potential improvements.

Goal: Determine baseline Data Source: Evidence-based literature, national benchmarks, other documentation Process Milestone 2 Estimated Incentive Payment: $77,171		**Process Milestone 3** [P-7] Implement intervention to provide retinal scans Goal: Implement interventions Data Source: Scheduling report Process Milestone 3 Estimated Incentive Payment: $178,902	**Outcome Improvement Target 1** [IT-1.12]: Increase percentage of established diabetic patients who have retinal exam Improvement Target: 60% of diabetic patients have eye exams annually Baseline: 48% (235/483) Goal: 60% of patients to have retinal eye exams Data Source: Administrative data Outcome Improvement Target 1 Estimated Incentive Payment*:* $287,076	**Outcome Improvement Target 2** [IT-1.12]: Increase percentage of established diabetic patients who have had retinal exam Improvement Target: 80% of diabetic patients have eye exams annually Goal: 80% of patients to have retinal eye exams Data Source: Administrative data Outcome Improvement Target 2 Estimated Incentive Payment*:* $686,486
Year 2 Estimated Outcome Amount: (add incentive payments amounts from each milestone/outcome improvement target): $154,342		**Year 3 Estimated Outcome Amount:** $178,902	**Year 4 Estimated Outcome Amount:** $287,076	**Year 5 Estimated Outcome Amount:** $686,486
TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD *(add outcome amounts over DYs 2-5):* $1,306,806				

Title of Outcome Measure (Improvement Target): IT-1.13 – Diabetes Care: Foot Exam

Unique RHP outcome identification number: 127295703.3.42

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT - 1.13 - Diabetes Care: Foot Exam (NQF 0056) (Non-standalone Measure)

Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who received a foot exam (visual inspection, sensory exam with monofilament, or pulse exam) during the measurement year.

Denominator: Patients 18-75 years of age as of December 31 of the measurement year who had a diagnosis of diabetes (type 1 or type 2)

Process Milestones:

- DY 2:
    - P-1: Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
    - P-3: Establish baseline rate
- DY 3:
    - P-7: Implement intervention to provide foot exams

Outcome Improvement Targets:

- DY4:
    - IT-1.13: Percentage of established diabetic patients who have foot exam in the recommended time-frame. Improvement Target: 60%
- DY 5:
    - IT-1.13: Percentage of established diabetic patients who have foot exam in the recommended time-frame. Improvement Target: 80%

Rationale

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 25.8 million Americans have diabetes, of which about 7 million are undiagnosed[587]. In addition, diabetes was the seventh leading cause of death in Americans of all ages in 2009, and the fifth leading cause of death among the "young old," ages 65-79[588]. Foot ulcers can be prevented if detected and addressed in the regular health visits.

Process milestones were chosen due to promote chronic disease management and the use of the chronic disease management mode in the primary care clinics. Improvement targets were chosen to insure success in providing foot exams to prevent further complications.

Title of Outcome Measure: IT-3.12 – Other: All Cause 30-day Readmission Rate for Patients enrolled in Outpatient Parenteral Antimicrobial Therapy (OPAT) Program

Unique RHP outcome identification number(s): 127295703.3.43

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-3.12 – All Cause 30-day Readmission Rate for those Patients enrolled in OPAT Program (Standalone Measure)

Numerator: Number of readmissions for patients 18 years and older for any cause from index admission.
Denominator: Number of admissions for patients 18 years and older for patients discharged from hospital with a PICC line to administer their antibiotics at home

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates
- DY3:
  - P-5: Disseminate findings, including best practices and lessons learned
  - P-7: Implement strategies

Outcome Improvement Targets for each year

- DY4:
  - IT-3.12: Other All Cause Readmission Rate. Improvement Target: Reduce All Cause 30-Day Readmission Rate for OPAT patients to ~~22%~~ 25%
- DY5:
  - IT-3.12: Other All Cause Readmission Rate. Improvement Target: Reduce All Cause 30-Day Readmission Rate for OPAT patients to ~~17%~~ 20%

Rationale

As the Planning Protocol Category 3 states, the relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions

may result from circumstances surrounding the initial hospital stay.[589] Additionally, hospital readmissions in many cases are preventable. According to a 2009 study, nearly 20% of Medicare beneficiaries are re-hospitalized within 30 days after discharge, at an annual cost of $17 billion.[590] Causes of avoidable readmissions include hospital-acquired infections and other complications; premature discharge; failure to coordinate and reconcile medications; inadequate communication among hospital personnel, patients, caregivers, and community-based clinicians; and poor planning for care transitions.

Patients who are discharged with PICC lines to administer their medications at home are at risk for readmission for several reasons including infection at the PICC site, abnormal blood levels, etc. Targeting All Cause readmissions will provide the best metric to insure that all readmissions for this specific population are reviewed and findings are utilized for further improvements to the program.

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to expand the program such that outcomes are improved and also to review opportunities to identify alternative and innovative ways to insure patients receive the post-acute care services they need regardless of their means to pay for such services. Improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately and to insure findings are reported and shared across the organization as well as throughout the region.

Title of Outcome Measure (Improvement Target): IT-4.8 – Sepsis Mortality (new)

Unique RHP outcome identification number(s): 127295703.3.44 (new)

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Outcome Measure Description

IT-4.8 – Sepsis Mortality (Standalone Measure)

Numerator: Number of patients expiring during current month hospitalization with sepsis, severe sepsis or septic shock and/or an infection or organ dysfunction

Denominator: Number of patients identified that month with sepsis, severe sepsis or septic shock and/or infection or organ dysfunction.

Data Source: Provider data

Process Milestones

- DY2:
  - P-1: Project Planning – engage stakeholders, identify current capacity and needed resources, determine timelines, document implementation plans
  - P-2: Establish baseline rates

- DY3:
  - P-5: Disseminate findings, including best practices and lessons learned
  - P-7: Implement strategies

Outcome Improvement Targets for each year

- DY4: Improvement Target (DY4 baseline)
  - IT-4.2: Reduce Sepsis Mortality rate 5% from baseline

- DY5: Improvement Target
  - IT-4.2: Reduce Sepsis Mortality additional 5% from DY4

Rationale

According to the Global Sepsis Alliance, "Sepsis cause more deaths per year than prostate cancer, breast cancer and HIV/AIDS combined. Globally 18 million cases of sepsis occurs each year and many experts in the field believe sepsis is actually responsible for the majority of mortality associated with HIV/AIDS, malaria, pneumonia and other infections acquired in the

community, healthcare settings and by traumatic injury."[591] Research finds that potential/suspected sepsis can be controlled and with efficient care and timely interventions including antimicrobials and IV fluids, the risk of death is almost cut in half. [592]

The Greater New York Hospital Association's STOP Sepsis collaborative has seen an 18% improvement in the sepsis mortality rate across the region from January of 2011 to June of 2012 by utilizing best practices such as improving communication between the ED and ICUs and appointment a designated point person to education staff on sepsis protocols. The IHI website claims that a 25% reduction in sepsis mortality is possible by adopting the severe sepsis care bundles.

Process milestones were chosen to insure the appropriate due diligence and planning is done in order to determine the clinical protocols that are appropriate in screening patients for sepsis in the ED and inpatient setting. Improvement targets were chosen based on the timeframe allowed to develop the plan and determine processes needed to collect and report data accurately and to insure findings are reported and shared across the organization as well as throughout the region.

Project Title: Expansion of Senior Dental Student Externship Program
RHP Project Identifier: 009784201.3.1
Performing Provider: Baylor College of Dentistry / 009784201

Outcome Measure Description:

The chosen outcome measure is one customized for this project: **IT-7.10 Percentage of new dental graduates entering practice in rural and/or underserved areas.** The numerator will be the number of students participating each year, with the total number of students in the class as the denominator. The baseline, or current percentage is approximately 5% of the class. The improvement targets are as follows; DY2: 7%, DY3: 8%, DY4: 9% and DY5: 10%.

The premise underlying training dental students in externships in rural and/or underserved areas is the potentially increased probability that they will enter practice in this type of area. Therefore, increasing the number of graduates with training experience in rural and/or underserved areas is one way of addressing the disadvantageous distribution of dentists in the state that currently exists.

Rationale:
The most straightforward way to measure progress in the project is simply documenting the number of students participating in the program. The externship program is already in operation, so the baselines are known and improvement targets can be specified for each year from DY2 going forward.

Outcome Measure Valuation:
The valuation of this project is based primarily on the value of the care provided by the students during their externship trainings. The population addressed will be patients in rural/underserved areas who will be treated by the trainees, and will number approximately 8,000 over the four years of the project. Estimating the number students participating annually, and their production capacity, we conservative estimate an annual total of 2,250 patient encounters. Based on data from non-profit providers in the Dallas area and some of the current externship sites, the average cost of each encounter is approximately $125. A multiplier of 2.7, based on data from The Original National Dental Advisory Service 2012 (Yale Wasserman, D.M.D. Medical Publishers, Ltd. NDAS 30th Edition), will be applied to the average encounter cost. Calculation of this multiplier is based on Medicaid dental reimbursements by procedure code versus the NDAS Comprehensive Fee Report, which is a nationwide marketplace analysis of usual and customary fees. The multiplier is also a way to incorporate the benefit to the community, in terms of addressing a high-priority community need, the size of the population served and the cost avoidance, e.g. reduced school absences, improved academic performance in children and decreased workdays lost due to dental complaints. Taken together, these figures estimate a total of $759,375 in treatment rendered during each year of the project.

Project Title: Expansion of Dallas County dental clinic hours
RHP Project Identifier: 009784201.3.2
Performing Provider: Baylor College of Dentistry / 009784201

Outcome Measure Description:

IT-7.1 Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal *(Non-standalone measure)*

Numerator: Number of children age 6-9 with a dental sealant on at least one permanent first molar within the measurement period
Denominator: Total number of children age 6-9 that have seen a dental provider within the measurement period
Data Source: EHR, Claims
Rationale/Evidence: Children who have regular access to a dental provider are more likely to have received preventive dental services such as sealant placement.
Improvement targets are as follows; DY2: 28%, DY3: 29%, DY4: 31% and DY5: 32%.

Data Source: EHR, Claims
Rationale/Evidence: Children who have regular access to a dental provider are more likely to have received preventive dental services such as fluoride varnish application
Improvement targets are as follows; DY2: 28%, DY3: 29%, DY4: 31% and DY5: 32%.

Rationale:
Approximately 80% of the population seen in the clinics involved in this project includes children age 6-20. Dental sealants are second only to community water fluoridation as an effective preventive strategy for caries. Dental sealants and fluoride varnish are highly effective preventive treatments in young children, and the patient population targeted by the sealant program is children age 6-9, thus outcome measures related to sealants and topical fluoride application are appropriate.

Project metrics will be assessed by collection of oral health surveillance data using the appropriate module of the Basic Screening Survey. Key oral health status indicators relating to project outcome milestones will be captured directly onsite at Dallas elementary school campuses for children enrolled in Kindergarten, second and third grade. Direct data entry will be performed in the school-based sealant program using the SmilesMaker software, a modified version of the CDC's S.E.A.L.S. data collection tool. In both modules of the Basic Screening Survey, the assessment includes age-appropriate oral measures of oral health status including: untreated decay, urgency of care, caries experience, dental sealants and early childhood caries.

Outcome Measure Valuation:

The valuation of this project is based primarily on the value of the care provided by the students during their rotations. The population seen in the clinics is overwhelmingly disadvantaged, underserved and of low socioeconomic status, and will number approximately 10,000 over the four years of the project. Estimating the number students participating annually and their production capacity, we calculate an annual total of 3,300 patient encounters in DY2 and approximately 10,500 each year thereafter. Based on data from non-profit providers in the Dallas area and some of the current externship sites, the average cost of each encounter is approximately $125. A multiplier of 2.7, based on data from The Original National Dental Advisory Service 2012 (Yale Wasserman, D.M.D. Medical Publishers, Ltd. NDAS 30th Edition), will be applied to the average encounter cost. Calculation of this multiplier is based on Medicaid dental reimbursements by procedure code versus the NDAS Comprehensive Fee Report, which is a nationwide marketplace analysis of usual and customary fees. The multiplier is also a way to incorporate the benefit to the community, in terms of addressing a high-priority need, reducing school absences, improving academic performance in children and decreasing workdays lost due to dental complaints, the size of the population served and cost avoidance, as well as the benefit of additional clinical training for the dental students. Altogether, these figures estimate a total of $1M in treatment during the first year of the project, and in excess of $3.6M each year thereafter.

Outcome Measure Description:

IT-7.3 Early Childhood Caries (fluoride applications): Percentage of children age 0-6 who received a fluoride varnish application during the measurement period. *(Non-standalone measure)* Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists - Percentage of children, age 0-6 years, who received a fluoride varnish application during the measurement period.

Numerator: Number of children age 0-6 years that have received at least one fluoride varnish application during the measurement period
Denominator: Total number of children age 0-6 years that have been seen by a primary care or dental provider.
Data Source: EHR, Claims
Rationale/Evidence: Children who have regular access to a dental provider are more likely to have received preventive dental services such as fluoride varnish application.
Improvement targets are as follows; DY2: 28%, DY3: 29%, DY4: 31% and DY5: 32%.

Rationale:
Approximately 80% of the population seen in the clinics involved in this project includes children age 6-20. Dental sealants are second only to community water fluoridation as an effective preventive strategy for caries. Dental sealants and fluoride varnish are highly effective preventive treatments in young children, and the patient population targeted by the sealant program is children age 6-9, thus outcome measures related to sealants and topical fluoride application are appropriate.

Project metrics will be assessed by collection of oral health surveillance data using the appropriate module of the Basic Screening Survey. Key oral health status indicators relating to project outcome milestones will be captured directly onsite at Dallas elementary school campuses for children enrolled in Kindergarten, second and third grade. Direct data entry will be performed in the school-based sealant program using the SmilesMaker software, a modified version of the CDC's S.E.A.L.S. data collection tool. In both modules of the Basic Screening Survey, the assessment includes age-appropriate oral measures of oral health status including: untreated decay, urgency of care, caries experience, dental sealants and early childhood caries.

Outcome Measure Valuation:
The valuation of this project is based primarily on the value of the care provided by the students during their rotations. The population seen in the clinics is overwhelmingly disadvantaged, underserved and of low socioeconomic status, and will number approximately 10,000 over the four years of the project. Estimating the number students participating

annually and their production capacity, we calculate an annual total of 3,300 patient encounters in DY2 and approximately 10,500 each year thereafter. Based on data from non-profit providers in the Dallas area and some of the current externship sites, the average cost of each encounter is approximately $125. A multiplier of 2.7, based on data from The Original National Dental Advisory Service 2012 (Yale Wasserman, D.M.D. Medical Publishers, Ltd. NDAS 30th Edition), will be applied to the average encounter cost. Calculation of this multiplier is based on Medicaid dental reimbursements by procedure code versus the NDAS Comprehensive Fee Report, which is a nationwide marketplace analysis of usual and customary fees. The multiplier is also a way to incorporate the benefit to the community, in terms of addressing a high-priority need, reducing school absences, improving academic performance in children and decreasing workdays lost due to dental complaints, the size of the population served and cost avoidance, as well as the benefit of additional clinical training for the dental students. Altogether, these figures estimate a total of $1M in treatment during the first year of the project, and in excess of $3.6M each year thereafter.

Project Title: Expansion of school-based sealant program
RHP Project Identifier: 009784201.3.5
Performing Provider: Baylor College of Dentistry / 009784201

Outcome Measure Description:

IT-7.1 Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal *(Non-standalone measure)*

Numerator: Number of children age 6-9 with a dental sealant on at least one permanent first molar within the measurement period
Denominator: Total number of children age 6-9 that have seen a dental provider within the measurement period
Data Source: EHR, Claims
Rationale/Evidence: Children who have regular access to a dental provider are more likely to have received preventive dental services such as sealant placement.
Improvement targets: DY2: 28%, DY3: 29%, DY4: 31% and DY5: 32%.

Rationale:

The target population for this project will be elementary school students (2nd and 3rd graders) in the Dallas Independent School District and various suburban school districts. More than 80% of DISD children are considered economically disadvantaged, far higher than the state figure of 59%. School campuses with an enrollment of at least 70% economically disadvantaged children will be eligible for participation. According to Basic Screening Survey data collected by the Texas Department of State Health Services in 2008, the last year for which data is available, 34% percent of Texas third-grade children had a sealant on at least one permanent molar tooth. In Dallas County, the figure was 28%. Children enrolled in Texas Medicaid and CHIP as well as those who are not eligible for public insurance will be served through the project. A secondary target population will be the BCD students themselves, who will receive community-based clinical training at the internship sites.

The population seen in the sealant program is children age 6-9. Dental sealants are second only to community water fluoridation as an effective preventive strategy for preventing caries. Dental sealants and fluoride varnish are highly effective preventive treatments in young children, and the patient population targeted by the sealant program is children age 6-9, thus outcome measures related to sealants and topical fluoride application are appropriate.

Project metrics will be assessed by collection of oral health surveillance data using the appropriate module of the Basic Screening Survey. Key oral health status indicators relating to project outcome milestones will be captured directly onsite at Dallas elementary school campuses for children enrolled in Kindergarten, second and third grade. Direct data entry will

be performed in the school-based sealant program using the SmilesMaker software, a modified version of the CDC's S.E.A.L.S. data collection tool. In both modules of the Basic Screening Survey, the assessment includes age-appropriate oral measures of oral health status including: untreated decay, urgency of care, caries experience, dental sealants and early childhood caries.

Outcome Measure Valuation:

The valuation of this project is based primarily on the value of the care provided by the students participating in the school-based sealant program. The population addressed will be second and third grade elementary students in the Dallas and suburban school districts, and over the four years of the project approximately 5,800 additional children will be screened, receive fluoride varnish applications and sealants. Data from the sealant program, collected over the past ten years, indicates that an average of three sealants are placed in each patient encounter, yielding a total of 17,400 additional sealants placed over the four years of the project, relative to baseline. Based on data from non-profit providers and private practitioners in the Dallas, the average fee for sealants is approximately $30 each. For purposes of this valuation, the cost of screenings and fluoride varnish application is not included. A multiplier of six, higher than for restorative treatment, will be applied to the cost of each sealant. The multiplier incorporates the benefit to the community in terms of addressing a high-priority community need, the size of the population served and cost avoidance, e.g. reduced school absences, improved academic performance in children. The cost avoidance, in terms of treatment averted, is particularly high for sealants. Data from studies of the efficacy, cost-effectiveness and cost-benefit of dental preventive intervention estimate that preventing decay on a tooth can avoid restorative treatment that, over a period of as short as ten years, may total as much as $2,800 per tooth, more than 90 times the cost of the sealant. Calculations based on cost, the number of sealants placed annually and the value multiplier estimate a total of $374,220 of care delivered in DY2 and approximately $928,000 each year thereafter.

Outcome Measure Description

IT-3.3 Diabetes 30 day readmission rate (Standalone measure)

- By the end of the waiver, our goal is to decrease 30 day readmission (all causes) for diabetes patients by 15%

- In DY2, we will complete project planning including identification and hiring of necessary staff, development of policies/procedures and processes
- In DY3, our goal is to reduce this rate by 4%; to conduct performance improvement projects to work towards further reductions and disseminate information to key stakeholders regarding our progress
- In DY4, to reduce diabetes patient readmissions by 10% from baseline, and in DY5 to reduce diabetes patient readmissions by 15% from baseline.

Process Milestones:

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY3:
    - IT-3.3 Diabetes 30 day readmission rate (Standalone measure) Improvement Target: 10% improvement from baseline.

- DY4
    - IT-3.3 Diabetes 30 day readmission rate (Standalone measure) Improvement Target: 10% improvement from baseline.
- DY5
    - IT-3.3 Diabetes 30 day readmission rate (Standalone measure) Improvement Target: 15% improvement from baseline.

Rationale

Texas Health Dallas is determined to improve the health and well-being of the community that THD serves and address the needs of the individuals that suffer from diabetes but do not have the means to keep it under control.

THD plans on educating patients that deal with type 1 & 2 diabetes and target specific areas where we can identify how THD is monitoring and managing the care of those individuals by including the following tactics.

- Perform a foot-check on patient
- Check A1C levels
- Assure patient has glucose measurement device & strips
- Ask patient to demonstrate how to use glucose measurement device
- Check to see if patient has medicine for diabetes
- Ask patient to verbalize what medicine they have and how/when to take
- Ask patient about "Sick Day Rule"
- Send patient to diabetes education class

These tactics will help THD verify and quantify how we are striving to improve the health of the community that suffers with diabetes.

Outcome Measure Valuation:

Approach/Methodology: For every inpatient readmission avoided, $8,297 in cost is saved by the healthcare system[593]. Healthcare costs are calculated by multiplying $8297 by the total individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we

[593] Texas Department of State Health Services with 30% ccr assumption. http://www.dshs.state.tx.us/ph/county.shtm

use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: Inpatient readmissions outcome improvement targets are dependent on the target population served (e.g. aging populations will have increased admissions due to higher incidence rates), size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable readmissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Title of Outcome Measure (Improvement Target): IT - 3.10 – Adult Asthma 30 day readmission rate

Unique RHP outcome identification number: 020908201.3.2

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas/020908201

Outcome Measure Description

IT-3.10 Adult Asthma 30 day readmission rate (Standalone measure)

- By the end of the waiver, our goal is to decrease 30 day readmission (all causes) for asthma patients to 8.4%.

- In DY2, we will:
    - Complete project planning including identification and hiring of necessary staff, development of policies/procedures and processes
- In DY3, our goal is to reduce this rate by 4%; to conduct performance improvement projects to work towards further reductions and disseminate information to key stakeholders regarding our progress
- In DY4, to reduce asthma patient readmissions by 10% from baseline, and in DY5 to reduce asthma patient readmissions by 15% from baseline.

Process Milestones:

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY3:
    - IT-3.10 Adult Asthma 30 day readmission rate (Standalone measure) Improvement Target: 4% improvement from baseline.
- DY4
    - IT-3. 10 Adult Asthma 30 day readmission rate (Standalone measure) Improvement Target: 10% improvement from baseline.
- DY5
    - IT-3. 10 Adult Asthma 30 day readmission rate (Standalone measure) Improvement Target: 15% improvement from baseline.

Rationale

Texas Health Dallas is determined to improve the health and wellbeing of the community that THD serves and address the needs of the individuals that suffer from asthma but do not have the means to keep it under control.

THD plans on educating patients with asthma and target specific areas where we can identify how THD is monitoring and managing the help of those individuals by including the following tactics.

- Make Peak Flow Monitor available for patient
- Demonstrate to patient how to use Peak Flow
- Have medicine available for patient
- Ask patient to demonstrate how to use an inhaler spacer
- Help patient identify personal asthma triggers
- Make follow up appointment for patient at THD Asthma Clinic.

These tactics will help THD verify and quantify how we are striving to improve the health of the community that suffers with asthma.

Outcome Measure Valuation:

Approach/Methodology: For every inpatient readmission avoided, $6,285 in cost is saved by the healthcare system[594]. Healthcare costs are calculated by multiplying $6,285 by the total

[594] Texas Department of State Health Services with 30% ccr assumption. http://www.dshs.state.tx.us/ph/county.shtm

individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: Inpatient readmissions outcome improvement targets are dependent on the target population served (e.g. aging populations will have increased admissions due to higher incidence rates), size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable readmissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Title of Outcome Measure (Improvement Target): IT-9.2 – ED Appropriate Utilization

Unique RHP outcome identification number: 020908201.3.3

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas/020908201

Outcome Measure Description

IT-9.2: ED Appropriate Utilization (Stand-alone Measure)

- By the end of the waiver, our goal is to improve appropriate ED utilization for the targeted populations by 18%.
- In DY2, we will:
    - Complete project planning including identification and hiring of necessary staff, development of policies/procedures and processes
    - Develop and test reporting and monitoring process to evaluate
    - Establish the baseline.
- In DY3, our goal is to reduce this rate by 5%; to conduct performance improvement projects to work towards further reductions and disseminate information to key stakeholders regarding our progress
- In DY4, to reduce ED utilization for the targeted populations by 10% from baseline.
- In DY5, to reduce ED utilization for the targeted populations by 18% from baseline.

Process Milestones:

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY3
    - IT-9.2: ED Appropriate Utilization Improvement Target: 5% improvement from baseline.
- DY4
    - IT-9.2: ED Appropriate Utilization Improvement Target: 10% improvement from baseline.
- DY5
    - IT-9.2: ED Appropriate Utilization Improvement Target: 18% improvement from baseline.

Rationale

Texas Health Dallas is determined to improve the health and well-being of the community that THD serves and address the needs of the individuals that are affected by the down turn in the economy and do not have sufficient income to manage their own health care.
THD plans on targeting specific areas where we can identify how THD is monitoring and managing the help of those individuals by including the following tactics.

- Allocate physician resources to help manage and educate patients on how to care for their health.
- Identify specific patients that are considered frequent fliers (ED visits 3 or greater in 2012) that are uninsured.
- Utilize EDs facility space in our low acute day center to treat and manage these specific patients on a day to day bases
- Expand THD ED staff to help justify financially the additional FTE's needed to direct patients and manage their health care while not hindering or slowing down the patient flow within in the main ED.
- In 2011, THD ED saw 1,112 uninsured patients with 3 or greater visits, a direct cost of $1,912,345 to THD, average of $1,719 per patient. A monthly average of $159,362.
- From Jan-Aug 2012, THD ED has currently seen 771 uninsured patients with 3 or greater visits, a direct cost of $949,080, average of $1,230 per patient. A monthly average of $118,635.
- The amount of "charity cost" that THD has written off in 2011 ($5,297,373) and in 2012 ($3,879,871) is overwhelming. With focusing our staff and other resources to

care for these patients, addressing their health care needs and set up a manageable health plan to treat and educate the patient while providing a strategy to get these patients on the road to a healthy life.

These tactics will help THD verify and quantify how we are striving to improve the health of the community we serve.

Outcome Measure Valuation

Approach/Methodology: For every ED visit avoided, $411 in cost is saved by the healthcare system.[595] The average length of stay per ED visit is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: ED visit outcome improvement targets are dependent on the target population served (e.g. the number of frequent flyers, patients with greater than three visits in a year), size (e.g. if a hospital is at maximum capacity, rates can only decrease), and current processes in place that already prevent navigate frequent flyers away from the ED.

Community benefits were calculated using the following factors: lost productivity (net of lost wages), lost in payroll taxes, and lost sales tax. Individual benefits were calculated using the following factors: lost wages, caretaker expense and extension of life (if applicable).

[595] Based on 2011 historical ED visits data for Texas Health Presbyterian Dallas

Title of Outcome Measure (Improvement Target: 1.7- Controlling High Blood Pressure

Unique RHP outcome identification number (s): 020908201.3.6

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas/020908201

Outcome Measure Description:

IT-1.7 Controlling High Blood Pressure

- **Numerator:** The number of patients in the denominator whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg)during the measurement year
- **Denominator:** Patients 18 to 85 years of age as of December 31 of the measurement year with a diagnosis of hypertension

Data Source: EHR, Register

Process Milestones:

- DY2:
    - P-1: Establish baseline rates of patients whose most recent BP is adequately controlled <140/90 mm Hg
- DY3:
    - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection
    - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY4:
    - IT-1.7: Increase number of people 18-75 years old with controlled high blood pressure (<140/90 mm Hg) by 10%.
- DY5:
    - IT-1.7: Increase number of people 18-75 years old with controlled high blood pressure (<140/90 mm Hg) by 15%.

By the end of the waiver, our goal is to increase number of patients 18 – 75 years old with controlled high blood pressure (<140/90 mm Hg) by 15%. Our milestones include the following:

Rationale

Approximately 33% of the US population and Texas has high blood pressure[596] and approximately 50% of this cohort controls their high blood pressure[597]. One of the Healthy People 2020 objectives is to increase the proportion of adults who have their high blood pressure under control[598]. Having high blood pressure can put you at risk for heart disease and stroke, which is the leading cause of death in the United States.[599] However, heart disease is among the most preventable chronic diseases. The leading modifiable (controllable) risk factors for heart disease are: (1) high blood pressure; (2) High blood cholesterol; (3) Cigarette smoking; (4) Diabetes; (5) Poor diet and physical activity and (6) Overweight and obesity.[600] According to the AHRQ rationale, there are multiple studies that have shown that aggressive treatment of high blood pressure can reduce deaths from stroke, heart disease and renal failure.[601] Measuring blood pressure values among patients 18 to 75 years of age with a diagnosis of hypertension identifies those patients who are in poor control and at highest risk for heart disease. We can measure whether evidenced-based self-management programs designed to reduce and control BP <140/90 mm Hg are working, as well as identify the high risk congregants we should target for these programs. In order to get high risk congregants blood pressure levels under control, we will be implementing evidenced-based self-management programs in our Category 2.2 Establishing self-management programs and wellness project so that congregant members with high blood pressure are receiving the knowledge, skills and tools to manage and control their blood pressure.

Achieving the goal of significantly increasing the number of congregants with controlled blood pressure will result in healthier people. As a result of this work, there will be overall improved population health for people with high blood pressure, which reduces the risk of people suffering from debilitating or deadly health complications from heart disease and/or stroke. By establishing evidenced-based self-management programs within the congregational setting people can stay healthy and out of the hospital, which will, in turn, reduce complications from high blood pressure presenting at the emergency room department or being admitted to the hospital.

Title of Outcome Measure (Improvement Target: 1.11- Diabetes care: BP control (<140/80mm Hg)

Unique RHP outcome identification number (s): 020908201.3.7

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas/020908201

Outcome Measure Description:

IT-1.11 Diabetes Care: BP Control (<140/80mm Hg)

- Numerator: Use automated data to identify the most recent blood pressure (BP) reading during measurement year. Member is numerator compliant if BP < 140/90 mm Hg.
- Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2)
- Data Source: EHR, Registry, Claims, Administrative clinical data

Process Milestones:

- DY2:
    - P-1: Establish baseline rates of patients whose most recent BP is adequately controlled <140/90 mm Hg
- DY3:
    - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection
    - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY4:
    - IT-1.7: Increase number of people 18-75 years old with controlled high blood pressure (<140/90 mm Hg) by 10%.
- DY5:
    - IT-1.7: Increase number of people 18-75 years old with controlled high blood pressure (<140/90 mm Hg) by 15%.

By the end of the waiver, our goal is to increase number of patients 18 – 75 years old with controlled high blood pressure (<140/90 mm Hg) by 15%. Our milestones include the following:

Rationale

Approximately 33% of the US population and Texas has high blood pressure[603] and approximately 50% of this cohort controls their high blood pressure[604]. One of the Healthy People 2020 objectives is to increase the proportion of adults who have their high blood pressure under control[605]. Having high blood pressure can put you at risk for heart disease and stroke, which is the leading cause of death in the United States.[606] However, heart disease is among the most preventable chronic diseases. The leading modifiable (controllable) risk factors for heart disease are: (1) high blood pressure; (2) High blood cholesterol; (3) Cigarette smoking; (4) Diabetes; (5) Poor diet and physical activity and (6) Overweight and obesity.[607] According to the AHRQ rationale, there are multiple studies that have shown that aggressive treatment of high blood pressure can reduce deaths from stroke, heart disease and renal failure.[608] Measuring blood pressure values among patients 18 to 75 years of age with a diagnosis of hypertension identifies those patients who are in poor control and at highest risk for heart disease. We can measure whether evidenced-based self-management programs designed to reduce and control BP <140/90 mm Hg are working, as well as identify the high risk congregants we should target for these programs. In order to get high risk congregants blood pressure levels under control, we will be implementing evidenced-based self-management programs in our Category 2.2 Establishing self-management programs and wellness project so that congregant members with high blood pressure are receiving the knowledge, skills and tools to manage and control their blood pressure.

Achieving the goal of significantly increasing the number of congregants with controlled blood pressure will result in healthier people. As a result of this work, there will be overall improved population health for people with high blood pressure, which reduces the risk of people suffering from debilitating or deadly health complications from heart disease and/or stroke. By establishing evidenced-based self-management programs within the congregational setting people can stay healthy and out of the hospital, which will, in turn, reduce complications from high blood pressure presenting at the emergency room department or being admitted to the hospital.

Outcome Measure Valuation

Title of Outcome Measure (Improvement Target): IT-11.5 Addressing Health in Minority Populations: All Cause Readmission Rate for Chronically Ill

Unique outcome identifier: 020908201.3.8

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas 020908201

Outcome Measure Description

The All-Cause Admission Rate for Chronically-Ill patients referred from Texas Health Dallas Presbyterian Hospital to Healing Hands Ministries (HHM) is intended to measure admission rate for chronically ill HHM patients post enrollment. The rate is arrived at using numerator which is the number of all-cause inpatient admissions in one year by patients the denominator - and the denominator which is the number of uninsured patients with a chronic disease (diagnosis of Diabetes, CHF, Hypertension, COPD, or Asthma) referred from hospital to HHM who have been enrolled in the HHM program at least one year. By the end of DY2, the All-Cause Admission rate for chronically ill patients' milestone baseline will be established. The admission rate improvement for DY3, DY4 and DY5 will be 5%, 7% and 10% under baseline respectively.

Rationale

As indicated in the Dallas Fort Worth Hospital Council's RHP 9 Community Needs Assessment, an analysis of the emergency department encounters demonstrates that many in the population are accessing emergency departments for both urgent and non-urgent conditions. Emergency room encounters that result in an in-patient admission tend to be more complex in nature and based on the data, the most frequent conditions that lead to admissions were: stroke, congestive heart failure, weak/failing kidneys, heart attack, and chronic bronchitis. There is a correlation between hospitalization for chronically-ill patients and access to primary care. Timely and effective primary care could reduce the risk of hospitalizations due to ambulatory care sensitive conditions. Therefore, the All-Cause Admission rate for MMH patients demonstrates one of the benefits of connecting a patient to a patient centered medical home. As stated by Bindman and others), "at a community level there is a strong positive association between health care access and preventable hospitalization rates."[610]

Outcome Measure Valuation

Approach/Methodology: For every inpatient readmission avoided, $7,724 in cost is saved by the healthcare system[611]. Healthcare costs are calculated by multiplying $7,724 by the total

[610] Bindman AB, Grumbach K, Osmond D, et al. Preventable Hospitalizations and Acess to Health Care. The Journal of the American Medical Association.1995;274(4):305-311.

[611] Based on the average avoided inpatient admission cost for Diabetes, CHF, Hypertension, COPD, or Asthma, and assumes a cost-to-revenue of 30%. Texas Department of State Health Services.

individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: Inpatient readmissions outcome improvement targets are dependent on the target population served (e.g. aging populations will have increased admissions due to higher incidence rates), size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable readmissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Title of Outcome Measure (Improvement Target): IT-5.1 - Cost of Care

Unique outcome identifier: 020908201.3.9

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Dallas 020908201

Outcome Measure Description

IT-5.1: Cost of Care: Cost Benefit Analysis of new enrollees in Healing Hands Ministries (HHM).

Process Milestones:

DY2:

- P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
- P-2 Establish baseline rates.

DY3:

- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
- P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY4
    - IT-5.1: Increase patient enrollment: 15% improvement from DY3.
- DY5
    - IT-5.1: Increase patient enrollment: 15% improvement from DY4.

Rationale

As indicated in the Dallas Fort Worth Hospital Council's RHP 9 Community Needs Assessment, an analysis of the emergency department encounters demonstrates that many in the population are accessing emergency departments for both urgent and non-urgent conditions. Emergency room encounters that result in an in-patient admission tend to be more complex in

nature and based on the data, the most frequent conditions that lead to admissions were: stroke, congestive heart failure, weak/failing kidneys, heart attack, and chronic bronchitis. There is a correlation between hospitalization for chronically-ill patients and access to primary care. Timely and effective primary care could reduce the risk of hospitalizations due to ambulatory care sensitive conditions. Lack of primary care and over utilization of the ED leads to increased cost.

- In 2011, THD ED saw 1,112 uninsured patients with 3 or greater visits, a direct cost of $1,912,345 to THD, average of $1,719 per patient. A monthly average of $159,362.
- From Jan-Aug 2012, THD ED has currently seen 771 uninsured patients with 3 or greater visits, a direct cost of $949,080, average of $1,230 per patient. A monthly average of $118,635.
- The amount of "charity cost" that THD has written off in 2011 ($5,297,373) and in 2012 ($3,879,871) is overwhelming. With focusing our staff and other resources to care for these patients, addressing their health care needs and set up a manageable health plan to treat and educate the patient while providing a strategy to get these patients on the road to a healthy life.

Texas Health Dallas Presbyterian Hospital donates $845 services provided per HHM enrollee/year, and a recent study[612] shows that enrolled patients reduce healthcare costs average ~$2,300 per patient/year. Based on this statistic, we estimated the cost benefit savings = $2,300 - $845 = $1,455 per HHM enrollee/ year.

Outcome Measure Valuation:

Approach/Methodology: For every enrollee, $1,455 in cost is saved by the healthcare system per year.1,2 Healthcare costs are calculated by multiplying $1,455 by the total number of enrollees. There are no direct individual or community savings being calculated for this outcome.

Rationale/Justification: Outcome improvement targets are dependent on the target population served (e.g. the number of new enrollees each year).

Title of Outcome Measure (Improvement Target): IT-9.2: ED Appropriate Utilization

Unique RHP Outcome Identification Number: 020967801.3.1

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Denton/020967801

Outcome Measure Description

IT-9.2 ED Appropriate Utilization

- By the end of the waiver, our goal is to improve appropriate ED utilization for the targeted populations by 18%.
- In DY2, we will:
    - Complete project planning including identification and hiring of necessary staff, development of policies/procedures and processes
    - Develop and test reporting and monitoring process to evaluate
    - Establish the baseline.
- In DY3, our goal is to conduct performance improvement projects to work towards reductions and disseminate information to key stakeholders regarding our progress
- In DY4, to reduce ED utilization for the targeted populations by 9% from baseline.
- In DY5, to reduce ED utilization for the targeted populations by 18% from baseline

Process Milestones:

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY4
    - IT-9.2: ED Appropriate Utilization Improvement Target: 9% improvement from baseline.
- DY5
    - IT-9.2: ED Appropriate Utilization Improvement Target: 18% improvement from baseline.

Rationale

Utilization of the Texas Health Presbyterian Hospital Denton's Emergency Department has been steadily increasing over the last several years with an 8.08% increase in ED patient volume between 2010 (35050 visits) and 2011 (37833 visits). Estimates for 2012 (42734 visits) indicate an additional 12.8% increase in volume will be noted from 2011 to 2012. 49.61% of the patients currently utilizing our ED are unfunded or Medicaid funded patients increasing from 46.89% in 2010, many of whom routinely use the ED for management of their chronic condition or episodic care. Baseline data regarding an active relationship with a PCP for this population is not known at this time. Frequent users of the ED for episodic care are comprised of a variety of diagnoses.

This program provides patients utilizing the ED for non-emergent care needs with a resource (ED-based nurse navigator) to help navigate them to appropriate resources.
The identified process milestones will assist the organization in developing and implementing the structure needed to complete the project. Process milestones identified in DY2 include the establishment of a baseline rate for measuring our effectiveness in future project years as well as the completion of planning for the project key components. Much focus in DY2 will be on the finalization of plans and implementation of a process for hiring and training staff, identifying individuals who are frequent users of the ED or who are utilizing the ED for services that might be provided at a lower level of care, and organizing a process to navigate the individuals to more appropriate health care venues. In DY2, we will also develop a mechanism for 1) tracking patients, 2) identifying referral resources, and (3) monitoring the effectiveness of interventions Utilization of improvement methodologies such as Plan-Do-Study-Act to identify and test processes for incremental improvements in processes and outcomes will be incorporated throughout the waiver period. Additionally, active dissemination of findings and lessons learned from the learning collaborative, as well as, best practices found in the literature will occur with stakeholders. DY 4 and 5, will continue to monitor our effectiveness and take action to improve performance as needs are identified

Outcome Measure Valuation

Approach/Methodology: For every ED visit avoided, $421 in cost is saved by the healthcare system.[613] The average length of stay per ED visit is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: ED visit outcome improvement targets are dependent on the target population served (e.g. the number of frequent flyers, patients with greater than three visits in a year), size (e.g. if a hospital is at maximum capacity, rates can only decrease), and current processes in place that already prevent navigate frequent flyers away from the ED.

Community benefits were calculated using the following factors: lost productivity (net of lost wages), lost in payroll taxes, and lost sales tax. Individual benefits were calculated using the following factors: lost wages, caretaker expense and extension of life (if applicable).

[613] Based on 2011 historical ED visits data for Texas Health Presbyterian Denton

Title of Outcome Measure (Improvement Target): 1.10 Diabetes Care: HbA1c Poor Control (>9.0%)

Unique RHP outcome identification number: 020967801.3.2

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Denton/020967801.3.2

Outcome Measure Description

IT-1.10 Diabetes Care: HbA1c Poor control (>9.0%)

- Decrease the Number of diabetes clinic participants whose HbA1C is >9.0 by 15%

Process Milestones:

- DY2:
    - P-1 Project planning, engage stake holders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
    - P-3 Develop and test data systems, Data source: Internally
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.
        - In DY3, our goal is to reduce this rate by four (4) percent.

Outcome Improvement Targets for each year:
By the end of the waiver, our goal is to improve the health of diabetes patients whose Hba1c is >9.0 by 15% or 300 patients.

- DY3:
    - HbA1c is >9.0 by 10 percent from baseline. 1IT- 3.2 Diabetes care: HbA1c
- DY4
    - 2IT-1.10 Diabetes care: HbA1c poor control (>9.0%), Rate of participants with HbA1c > 9.0. More specific, In DY4, the goal is to reduce the number of patients with diabetes whose HbA1c is >9.0 by 10 percent from baseline.

- DY5
    - 3IT-1.10 –Diabetes care: HbA1c poor control (>9.0%), Rate of participants with HbA1C >9.0. More specific, In DY4, the goal is to reduce the number of patients with diabetes whose HbA1c is >9.0 by 15 percent from baseline.

Rationale

The goal of this project is to develop and implement a more comprehensive diabetes education, self management, identify a medical home and reduce 30-Day readmissions caused by uncontrolled diabetes among the under served within our community. Our goal is to improve health outcomes and diabetes self management competency of the resident of Denton County. In doing so, our facility will form a multidisciplinary team, including a certified diabetes educator, clinical navigator, pharmacists, dieticians, physicians, and nurses that will manage the Wagner Chronic Care Clinic model to assist patients with the management of their diabetes.

Currently, the THDN ED provides an exemplary level of care to a diverse population. In order to prevent diabetes complications, patients need an alternative toward using the ED for primary care. We have selected this project to reduce complications associated with diabetes, reduce ED visits and readmissions, and improve the quality of life for this diverse populous.

Denton County is one of the fastest-growing counties in the U.S. As of the 2010 census, its population was 662,614, which is a 41.4% increase in population between the years 2000-2007. The demographics of the county was 75% White, 8.4% Black or African American, 0.7% Native American, 6.6% Asian, 0.1% Pacific Islander, and 2.9% from two or more races. 18.2% of the population was of Hispanic or Latino origin.

According to the US Department of Health and Human Services 2007 Report the Denton County population consists of 4.6% diabetics, 23.3% obese, 17.3% high blood pressure, 16.2% use tobacco, 22.2% do not exercise and 80.1% consume few fruits and vegetables. The THDN ED, alone, has experienced significant growth over the last three years.

YTD as of 9/2012 ER Visits = 32,132
2011 – ER Visits = 37,883
2010 – ER Visits – 35,050

Currently, there is not a consistent method for identifying diabetics who present in the ED, which results in variability of care for the underserved. Some of these patients have not been effectively educated on how to manage their diabetes and/or understand their daily regimen and need for monitoring of their disease process. This gap has created a lack of understanding for their long-term goals.

This program is designed to help those in need of education on managing chronic diabetes patients by providing education and disease management services. In turn, it will also reduce

the number of 30-day readmissions. Patients will be identified by: first, partnering with primary care clinicians to utilize protocols: A1C>9, history of DKA, > one admission in the last 12 months as criteria for referrals to outpatient diabetes education. Second, ED case management and inpatient diabetes educator will identify patients with the same criteria as above, help identify a patient centered medical home for diabetics that have not received diabetes education ever or within the last five years, and provide education for others as needed and within the community.

As a result, we have calculated the following targets:

IP Admissions DY2 649	IP Admissions in DY3 681	IP Admission DY4 715
Readmission rate 16%	Readmission rate 16%	Readmission 16%
Readmit Reduction 0	Readmit Reduction 3%	Readmit Reduction 6%

By DY5, THDN would reduce the readmission rate by 15% based on 751 admissions and a 16% readmit rate. In DY3, DY4 and DY5, we will continue to monitor our effectiveness and take the necessary steps to improve performance.

Outcome Measure Valuation:

Approach/Methodology: For every inpatient admission avoided, $8297 in cost is saved by the healthcare system.[614] Healthcare costs are calculated by multiplying $8297 by the total individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: Inpatient admissions outcome improvement targets are dependent on the target population being enrolled by the respective hospital, size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable inpatient admissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Community benefits were calculated using the following factors: lost productivity (net of lost wages), work preseentism, lost payroll taxes, and lost sales tax. Individual benefits were calculated using the following factors: lost wages, caretaker expense and extension of life (if applicable).

[614] Based on 2011 historical inpatient diabetes admissions data for Texas Health Arlington Memorial

Title of Outcome Measure (Improvement Target): 9.2 ED Appropriate Utilization

Unique RHP outcome identification number: 094140302.3.1

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Kaufman/094140302

Outcome Measure Description

IT-9.2 ED Appropriate Utilization

- By the end of the waiver, our goal is to improve appropriate ED utilization for the targeted populations by 18%.
- In DY2, we will:
    - Complete project planning including identification and hiring of necessary staff, development of policies/procedures and processes
    - Develop and test reporting and monitoring process to evaluate
    - Establish the baseline.
- In DY3, our goal is to reduce this rate by 18%; to conduct performance improvement projects to work towards further reductions and disseminate information to key stakeholders regarding our progress
- In DY4, to reduce ED utilization for the targeted populations by 18% from baseline.

In DY5, to reduce ED utilization for the targeted populations by 18% from baseline

Process Milestones

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

- P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY4
  - IT-9.2: ED Appropriate Utilization Improvement Target: 18% improvement from baseline.
- DY5
  - IT-9.2: ED Appropriate Utilization Improvement Target: 18% improvement from baseline.

Rationale

It is anticipated that this program patients utilizing the ED for non-emergent care or repetitive chronic care needs with a culturally competent ED-based nurse navigator to help connect them to appropriate resources and consistent clinical care. Utilization of the emergency department for management of chronic disease or for episodic care results in higher health care costs and less effective management of chronic health conditions or disease prevention. Through the implementation of this program, the ED nurse navigator can connect the patients without an established PCP to a healthcare provider, assist in coordination of service amongst specialties, connect the patient to appropriate community resources (financial, transportation, child care, medication support, translation/interpretation services, etc.), provide necessary education for improved self-management skills and assist patients in complying with follow-up care to improve their health and prevent utilization of more costly resources (such as the emergency department or hospital). Additionally, this specific role can learn from others or share lessons learned with others in the learning collaborative related to this state-wide initiative to improve related outcomes

Approach/Methodology: For every ED visit avoided, $421 in cost is saved by the healthcare system.[615] The average length of stay per ED visit is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: ED visit outcome improvement targets are dependent on the target population served (e.g. the number of frequent flyers, patients with greater than three visits in

[615] Based on 2011 historical ED visits data for Texas Health Presbyterian Kaufman

a year), size (e.g. if a hospital is at maximum capacity, rates can only decrease), and current processes in place that already prevent navigate frequent flyers away from the ED.

Community benefits were calculated using the following factors: lost productivity (net of lost wages), lost in payroll taxes, and lost sales tax. Individual benefits were calculated using the following factors: lost wages, caretaker expense and extension of life (if applicable).

Title of Outcome Measure (Improvement Target): IT-1.10: Diabetes Care: HbA1c Poor Control (>9.0%)

Unique RHP outcome identification number: 094140302.3.2

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Kaufman/094140302

Outcome Measure Description

IT-1.10 Diabetes Care: HbA1c Poor control (>9.0%)

- Decrease the Number of diabetes clinic participants whose HbA1C is >9.0 by 15%

Process Milestones

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
    - P-3 Develop and test data systems, Data source: Internally
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders

Outcome Improvement Targets for each year

- DY3:
    - 1IT- 3.2 Diabetes care: HbA1c
- DY4
    - 2IT-1.10 Diabetes care: HbA1c poor control (>9.0%), Rate of participants with HbA1c > 9.0

- DY5
    - 3IT-1.10 –Diabetes care: HbA1c poor control (>9.0%), Rate of participants with HbA1C >9.0

Rationale

The goal of this project is to develop and implement a more comprehensive diabetes education center/medical home to help reduce the rates of uncontrolled diabetes among project participants.

Our goal is to improve the health outcomes and diabetes self-management competency of community residents in Kaufman County THK data indicates that Medicaid and uninsured patients make up about 31% of our payer mix of those treated and released from the ED and approximately 28.05% of inpatient population.

In our service area the Hispanic community makes up approximately 18% of the population and is the fastest growing ethnicity in Kaufman County. Hispanic people are about 1.5 times more likely to develop diabetes than non-Hispanic white people.

In the current THK Outpatient Diabetes Education Program, approximately 75% of those served are Caucasian, thus indicating a need for innovation and creativity to reach this population. By developing a comprehensive diabetes clinic available to unfunded or government-funded members in the community, individuals previously struggling to obtain medical care will have access to the care they need to more effectively manage their diabetes.

The identified process milestones will assist the organization in developing and implementing the structure needed to complete the project. Process milestones identified in DY2 include the establishment of a baseline rate for measuring our effectiveness in future project years as well as the completion of planning for the project key components. Much focus in DY2 will be on the finalization of plans and implementation of an outpatient nurse-practitioner run diabetes clinic, expanding on the existing diabetes self-management education service currently provided to our patients. In DY2, we will also develop a mechanism for identifying and tracking high-risk diabetic patients and monitoring effectiveness of interventions (enhanced education, self-management coaching, closer monitoring of medical condition, post-discharge telephonic case management,…) to begin analysis of our information and determine potential improvement opportunities.

- In DY3, performance improvement initiatives will be implemented based on opportunities identified and a reporting mechanism developed to disseminate information regarding project

- In DY 4 and 5, we will continue to monitor our effectiveness and take action to improve performance as needs are identified

Outcome Measure Valuation

Approach/Methodology: For every inpatient admission avoided, $8297 in cost is saved by the healthcare system.[616] Healthcare costs are calculated by multiplying $8297 by the total individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

Rationale/Justification: Inpatient admissions outcome improvement targets are dependent on the target population being enrolled by the respective hospital, size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable inpatient admissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Title of Outcome Measure (Improvement Target): IT-3.3 Diabetes 30-day Readmission Rate

Unique RHP outcome identification number: 094140302.3.3

Performing Provider Name/TPI: Texas Health Presbyterian Hospital Kaufman/094140302

Outcome Measure Description

IT-3.3 Diabetes 30 Day Readmission Rate

- Rate 1: Number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission.

Process Milestones:

- DY2:
    - P-1 Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.
    - P-2 Establish baseline rates.
    - P-3 Develop and test data systems, Data source: Internally
- DY3:
    - P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.
    - P-5 Disseminate findings, including lessons learned and best practices to stakeholders.

Outcome Improvement Targets for each year:

- DY3:
    - 1IT- 3.2 Diabetes 30 day readmission rate (Standalone Measure) Improvement Target: 4% reduction from baseline
- DY4
    - IT-3.2 Diabetes 30 day readmission rate (Standalone measure) Improvement Target: 10% reduction from baseline.
- DY5
    - 1T-3.2 Diabetes 30 day readmission rate (Standalone measure) Improvement Target: 15% reduction from baseline

Rationale

The goal of this project is to develop and implement a more comprehensive diabetes education center/medical home to help reduce the rates of uncontrolled diabetes among project participants. Our goal is to improve the health outcomes and diabetes self-management competency of community residents in Kaufman County According to internal data, diabetes was the fourth highest readmission rate at THK from August 2011 – July 2012 this indicates a 30 readmission rate of over 19%. Additionally, 10% of the THK service area has been diagnosed with diabetes. Based on THK outpatient diabetes education data, the program is underutilized in comparison with the service area diabetic population. Our proposed intervention will help individuals who are traditionally underserved and give them access to diabetes education and regular clinical care so they can better manage their diabetes and prevent hospital readmissions.

The identified process milestones will assist the organization in developing and implementing the structure needed to complete the project. Process milestones identified in DY2 include the establishment of a baseline rate for measuring our effectiveness in future project years as well as the completion of planning for the project key components. Much focus in DY2 will be on the finalization of plans and implementation of an outpatient nurse-practitioner run diabetes clinic, expanding on the existing diabetes self-management education service currently provided to our patients. In DY2, we will also develop a mechanism for identifying and tracking high-risk diabetic patients and monitoring effectiveness of interventions (enhanced education, self-management coaching, closer monitoring of medical condition, post-discharge telephonic case management,…) to begin analysis of our information and determine potential improvement opportunities.
In DY3, performance improvement initiatives will be implemented based on opportunities identified and a reporting mechanism developed to disseminate information regarding project. In DY 4 and 5, we will continue to monitor our effectiveness and take action to improve performance as needs are identified.

Outcome Measure Valuation:

Approach/Methodology: For every inpatient admission avoided, $8297 in cost is saved by the healthcare system.[617] Healthcare costs are calculated by multiplying $8297 by the total individuals affected. The average length of stay per admission is multiplied by the number of avoidable admissions to determine the total days saved by the individuals affected. Next, we use the total days saved to calculate individual and community costs. The total valuation is calculated by summing up healthcare costs, individual costs, and community costs.

[617] Based on 2011 historical inpatient diabetes admissions data for Texas Health Arlington Memorial

Rationale/Justification: Inpatient admissions outcome improvement targets are dependent on the target population being enrolled by the respective hospital, size (e.g. if a hospital is at maximum capacity, admission rates can only decrease), and current processes in place that already prevent avoidable inpatient admissions (e.g. keeping lower acuity patients under observation instead of admitting them).

Community benefits were calculated using the following factors: lost productivity (net of lost wages), work preseentism, lost payroll taxes, and lost sales tax. Individual benefits were calculated using the following factors: lost wages, caretaker expense and extension of life (if applicable).

Title of Outcome Measures (Improvement Target): IT-12.1 - Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcomes identification number: 126686802.3.1

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.1 Breast Cancer Screening

This outcome measure is a measure of the number of eligible women who get screening mammography as a screen for breast cancer. The measure will be defined as follows:

Numerator: Number of eligible women aged 40 to 69 that have received an annual mammogram during the reporting period.

Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this measure will include the following:

DY2 – determination of baseline and create registry of eligible women; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Increase the percentage of eligible women who get screening mammography by: number to be determined over baseline
DY4 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY3
DY5 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY4

Data Source: EHR, Claims

Rationale

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier

and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. Mammogram provides such a test for women.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of breast cancer screening was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needed screening for breast cancer. This project is scalable to any size population of eligible women. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from breast cancer are prevented and the costs of hospitalization for breast cancer can be avoided. In addition, screening for breast cancer in eligible women was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): IT-12.3 - Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number: 126686802.3.2

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.3 Colorectal Cancer Screening

Colon cancer is a common cause of cancer death and the outcomes of colon cancer can be improved by appropriate screening. This project will improve the rate of colon cancer screening in the targeted population. The definition of the measure will be as follows:

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings: fecal occult blood test yearly, flexible sigmoidoscopy every five years, or colonoscopy every 10 years
Denominator: Number of adults aged 50 to 75 in our patient population. Adults with colorectal cancer or total colectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this project include the following:

DY2 – establish baseline and registry for eligible patients; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop implementation strategy for colon cancer screening for eligible population
DY4 – increase percent of eligible patients that get screening by number TBD
DY5 – increase percent of eligible patients that get screening by number TBD

Data Source: EHR, Claims

Rationale

A Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of

and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing screening for colon cancer. Title of Outcome Measure (Improvement Target): IT-12.4 - Pneumonia vaccination status for older adults

Unique RHP outcome identification number: 126686802.3.3

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.4 Pneumonia vaccination status for older adults

This project will evaluate the percent of eligible patients who get recommended vaccination for Pneumococcal pneumonia. The measure will be defined as follows:

Numerator: The number of eligible patients age 65 and older that have ever received a pneumonia vaccine

Denominator: Number of adults aged 64 and older in the patient or target population.

Process and Improvement Milestones

The milestones for this project will include the following:

DY2 – establish baseline and eligible patient registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Develop implementation plan for vaccination strategy
DY4 – increase the percent of eligible patients who get vaccination by number TBD
DY5 – increase the percent of eligible patients who get vaccination by number TBD

Data Source: EHR, Claims

Rationale

Vaccination of elderly patients for pneumococcal pneumonia is a well establish health maintenance performance measure. It is an effective preventive measure for this common condition that has a high mortality in the elderly. Measurement of the percent of patients in a population of elderly patients is a well established measure of quality of care in primary care practices.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing pneumococcal vaccine. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from pneumococcal pneumonia and sepsis are reduced and the costs of hospitalization for pneumococcal infection can be avoided. In addition, providing pneumococcal vaccination for eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): IT-12.1 - Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcomes identification number: 126686802.3.4

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.1 Breast Cancer Screening

This outcome measure is a measure of the number of eligible women who get screening mammography as a screen for breast cancer. The measure will be defined as follows:

Numerator: Number of eligible women aged 40 to 69 that have received an annual mammogram during the reporting period.

Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this measure will include the following:

DY2 – determination of baseline and create registry of eligible women; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Increase the percentage of eligible women who get screening mammography by: number to be determined over baseline
DY4 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY3
DY5 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY4

Data Source: EHR, Claims

Rationale

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier

and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. Mammogram provides such a test for women.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of breast cancer screening was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needed screening for breast cancer. This project is scalable to any size population of eligible women. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from breast cancer are prevented and the costs of hospitalization for breast cancer can be avoided. In addition, screening for breast cancer in eligible women was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number: 126686802.3.5

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.3 Colorectal Cancer Screening

Colon cancer is a common cause of cancer death and the outcomes of colon cancer can be improved by appropriate screening. This project will improve the rate of colon cancer screening in the targeted population. The definition of the measure will be as follows:

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings: fecal occult blood test yearly, flexible sigmoidoscopy every five years, or colonoscopy every 10 years
Denominator: Number of adults aged 50 to 75 in our patient population. Adults with colorectal cancer or total colectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this project include the following:

DY2 – establish baseline and registry for eligible patients; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop implementation strategy for colon cancer screening for eligible population
DY4 – increase percent of eligible patients that get screening by number ***TBD***
DY5 – increase percent of eligible patients that get screening by number ***TBD***

Data Source: EHR, Claims

Rationale

A Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of

and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing screening for colon cancer. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from colon cancer are prevented and the costs of hospitalization for colon cancer can be avoided. In addition, screening for colon cancer in eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Pneumonia vaccination status for older adults

Unique RHP outcome identification number: 126686802.3.6

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-12.4 Pneumonia vaccination status for older adults

This project will evaluate the percent of eligible patients who get recommended vaccination for Pneumococcal pneumonia. The measure will be defined as follows:

Numerator: The number of eligible patients age 65 and older that have ever received a pneumonia vaccine

Denominator: Number of adults aged 64 and older in the patient or target population.

Process and Improvement Milestones

The milestones for this project will include the following:

DY2 – establish baseline and eligible patient registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Develop implementation plan for vaccination strategy
DY4 – increase the percent of eligible patients who get vaccination by number ***TBD***
DY5 – increase the percent of eligible patients who get vaccination by number ***TBD***

Data Source: EHR, Claims

Rationale

Vaccination of elderly patients for pneumococcal pneumonia is a well establish health maintenance performance measure. It is an effective preventive measure for this common condition that has a high mortality in the elderly. Measurement of the percent of patients in a population of elderly patients is a well established measure of quality of care in primary care practices.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the

medical needs of those patients identified as needing pneumococcal vaccine. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from pneumococcal pneumonia and sepsis are reduced and the costs of hospitalization for pneumococcal infection can be avoided. In addition, providing pneumococcal vaccination for eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcomes identification number: 126686802.3.7

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.1 Breast Cancer Screening

This outcome measure is a measure of the number of eligible women who get screening mammography as a screen for breast cancer. The measure will be defined as follows:

Numerator: Number of eligible women aged 40 to 69 that have received an annual mammogram during the reporting period.

Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this measure will include the following:

DY2 – determination of baseline and create registry of eligible women; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Increase the percentage of eligible women who get screening mammography by: number to be determined over baseline
DY4 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY3
DY5 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY4

Data Source: EHR, Claims

Rationale

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of

and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. Mammogram provides such a test for women.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of breast cancer screening was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needed screening for breast cancer. This project is scalable to any size population of eligible women. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from breast cancer are prevented and the costs of hospitalization for breast cancer can be avoided. In addition, screening for breast cancer in eligible women was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number: 126686802.3.8

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.3 Colorectal Cancer Screening

Colon cancer is a common cause of cancer death and the outcomes of colon cancer can be improved by appropriate screening. This project will improve the rate of colon cancer screening in the targeted population. The definition of the measure will be as follows:

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings: fecal occult blood test yearly, flexible sigmoidoscopy every five years, or colonoscopy every 10 years
Denominator: Number of adults aged 50 to 75 in our patient population. Adults with colorectal cancer or total colectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this project include the following:

DY2 – establish baseline and registry for eligible patients; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop implementation strategy for colon cancer screening for eligible population
DY4 – increase percent of eligible patients that get screening by number ***TBD***
DY5 – increase percent of eligible patients that get screening by number ***TBD***

Data Source: EHR, Claims

Rationale

A Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier

and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing screening for colon cancer. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from colon cancer are prevented and the costs of hospitalization for colon cancer can be avoided. In addition, screening for colon cancer in eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Pneumonia vaccination status for older adults

Unique RHP outcome identification number: 126686802.3.9

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-12.4 Pneumonia vaccination status for older adults

This project will evaluate the percent of eligible patients who get recommended vaccination for Pneumococcal pneumonia. The measure will be defined as follows:

Numerator: The number of eligible patients age 65 and older that have ever received a pneumonia vaccine

Denominator: Number of adults aged 64 and older in the patient or target population.

Process and Improvement Milestones

The milestones for this project will include the following:

DY2 – establish baseline and eligible patient registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Develop implementation plan for vaccination strategy
DY4 – increase the percent of eligible patients who get vaccination by number ***TBD***
DY5 – increase the percent of eligible patients who get vaccination by number ***TBD***

Data Source: EHR, Claims

Rationale

Vaccination of elderly patients for pneumococcal pneumonia is a well establish health maintenance performance measure. It is an effective preventive measure for this common condition that has a high mortality in the elderly. Measurement of the percent of patients in a population of elderly patients is a well established measure of quality of care in primary care practices.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the

medical needs of those patients identified as needing pneumococcal vaccine. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from pneumococcal pneumonia and sepsis are reduced and the costs of hospitalization for pneumococcal infection can be avoided. In addition, providing pneumococcal vaccination for eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Cholesterol management for patients with cardiovascular conditions NCQA-HEDIS 2012 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.10

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-1.6 Cholesterol management for patients with cardiovascular conditions

This project will assess and improve the percent of patients with known coronary artery disease who have their LDL adequately controlled by current standards. The definition of the measured will be as follows:

Numerator: Number of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

Denominator: Patients aged 18 to 75 years as of December 31 of the measurement year who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG), or percutaneous coronary interventions (PCI) from January 1 through November 1 of the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during measurement year and the year prior to the measurement year.

Process and Improvement Milestones

Milestones that will be determined in the project include:

DY2 – assessment of baseline percent of patients controlled and establishment of hypercholesterolemia registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Assess data accuracy and develop management strategy
DY4 - increase the percent of patients with adequate cholesterol control by **TBD**
DY5 - increase the percent of patients with adequate cholesterol control by **TBD**

Data Source: EHR, Claims

Rationale

Total blood cholesterol is directly related to the development of coronary artery disease (CAD) and coronary heart disease (CHD), with most of the risk being associated with low-density lipoprotein cholesterol (LDL-C). When LDL-C levels are high, cholesterol can build up within the walls of the arteries, causing atherosclerosis, the build-up of plaque. Hemorrhaging or clot formation can occur at the site of plaque build-up, blocking arteries and causing heart attack and stroke. Reducing cholesterol in patients with known heart disease is critically important, as treatment can reduce morbidity (heart attack and stroke) and mortality by as much as 40%. The National Cholesterol Education Program (NCEP) has established guidelines for managing cholesterol levels in patients with heart disease. The guidelines established the need for close monitoring of LDL cholesterol in patients with coronary heart disease and set a target for LDL-C of less than or equal to 100 mg/dL for such patients. Cholesterol screening and control depends on the combined efforts of patient, physician and organization. Lifestyle factors and new medications offer tangible means for reducing cholesterol and the risk of heart disease.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients cardiovascular disease who need screening for adequate control of cholesterol. This project is scalable to any size population of eligible patients. The populations served will be the primary care and cardiology patients of the UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from cardiovascular disease are decreased with subsequent reduction of the costs of hospitalization for these patients. Screening for cholesterol in this population was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Controlling high blood pressure NCQA-HEDIS 2012, NQF 0018 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.11

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-1.7 Controlling high blood pressure

This measure will assess the number of patients with hypertension who have their blood pressure controlled to at least 140/90 during the measurement year. The measure will be defined as:

Numerator: The number of patients in the denominator whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year

Denominator: Patients 18 to 85 years of age as of December 31 of the measurement year with a diagnosis of hypertension

Process and Improvement Milestones

Milestone of this project will include:

DY2 – assessment of baseline percent of patients controlled of study population and establishment of hypertension registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – increase the percent of patients with adequate hypertension control by **TBD**
DY4 - increase the percent of patients with adequate hypertension control by **TBD**
DY5 - increase the percent of patients with adequate hypertension control by **TBD**

Data Source: EHR, Claims

Rationale

Approximately 76.4 million (33.5 percent) of people in the United States have high blood pressure. Numerous clinical trials have shown that aggressive treatment of high blood pressure reduces mortality from heart disease, stroke and renal failure; results are particularly striking in elderly hypertensive patients, which are more likely to have heart failure. A pool of past clinical trials demonstrated that a 5 mm to 6 mm Hg reduction in diastolic blood pressure was associated with a 42 percent reduction in stroke mortality and a 14 percent to 20 percent reduction in mortality from coronary heart disease (CHD). Literature from clinical trials indicates

that 53 percent to 75 percent of people under treatment achieved control of their blood pressure. The specifications for this measure are consistent with current guidelines, such as those of the USPSTF and the Joint National Committee.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of uncontrolled hypertension was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of hypertensive patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from hypertension are prevented and the costs of hospitalization for complications from hypertension can be avoided. In addition, control of hypertension was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measure (Improvement Target): Diabetes care: HgbA1c poor control (>9.0%) NQF 0059 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.12

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description:

IT-1.10 Diabetes care: HgbA1c poor control (>9.0%)

This measure will assess how well diabetic patients have their blood glucose controlled. The definition of the measure is as follows:

1. Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.

2. Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2)

3. This metric will be calculated quarterly for the primary care practice and for each individual provider. The proportion of patients with poor control will be trended and the outcome is to decrease this number by 10% in year 4 and 10% in year 5 if the proportion of patients with a HgbA1c more than 9% is greater than 15%. If the number is less than 15% the outcome metric will be to maintain the number at less than 15%. The milestones are as described in the valuation. A diabetes registry will be developed and data collected for all HgbA1c measurements for all diabetic patients. This registry and data will be validated and the accuracy of the registry and all administrative and clinical data will be checked and improved using a PDCA methodology. Reports will be given to providers at least quarterly

Process and Improvement Milestones

The milestone for this project include

DY2 – establishment of baseline and registry of eligible diabetic patients in the population; Outcome Improvement Targets will be determined in DY2 for DY3 implementation

DY3 – establish treatment protocols and best practices for controlling glucose and test data systems

DY4 – decrease the percent of patients with HgbA1c > 0.9% by TBD

DY5 - decrease the percent of patients with HgbA1c > 0.9% by TBD

Data Source: EHR, Registry, Claims, Administrative clinical data

Rationale

Diabetes has been and remains a major cause of morbidity and mortality in the US. It is also one of the most costly and highly prevalent chronic diseases in this country. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if the disease is detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications.

A reliable method of assessing the control of diabetes is periodically measuring the glycosylated hemoglobin (HgbA1c) which provides a reliable estimate of the average glucose of patients over several weeks. Studies have shown that adequate control of diabetes as measured by HgbA1c reduces complications, prevents hospitalizations and prolong life and quality of life. Consequently, developing a system to monitor patients with diabetes with regular assessment of HgbA1c and intervening in those with levels indicating poor control of diabetes will improve the outcomes of these patients. If applied nationally diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation:

In the rationale for this project, the magnitude of the problem of uncontrolled diabetes was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of diabetic patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from diabetes are prevented and the costs of hospitalization for complications from diabetes can be avoided. In addition, control of diabetes was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measure (Improvement Target): Cholesterol management for patients with cardiovascular conditions NCQA-HEDIS 2012 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.13

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-1.6 Cholesterol management for patients with cardiovascular conditions

This project will assess and improve the percent of patients with known coronary artery disease who have their LDL adequately controlled by current standards. The definition of the measured will be as follows:

Numerator: Number of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

Denominator: Patients aged 18 to 75 years as of December 31 of the measurement year who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG), or percutaneous coronary interventions (PCI) from January 1 through November 1 of the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during measurement year and the year prior to the measurement year.

Process and Improvement Milestones

Milestones that will be determined in the project include:

DY2 – assessment of baseline percent of patients controlled and establishment of hypercholesterolemia registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Assess data accuracy and develop management strategy
DY4 - increase the percent of patients with adequate cholesterol control by **TBD**
DY5 - increase the percent of patients with adequate cholesterol control by **TBD**

Data Source: EHR, Claims

Rationale

Total blood cholesterol is directly related to the development of coronary artery disease (CAD) and coronary heart disease (CHD), with most of the risk being associated with low-density lipoprotein cholesterol (LDL-C). When LDL-C levels are high, cholesterol can build up within the walls of the arteries, causing atherosclerosis, the build-up of plaque. Hemorrhaging or clot formation can occur at the site of plaque build-up, blocking arteries and causing heart attack and stroke. Reducing cholesterol in patients with known heart disease is critically important, as treatment can reduce morbidity (heart attack and stroke) and mortality by as much as 40%. The National Cholesterol Education Program (NCEP) has established guidelines for managing cholesterol levels in patients with heart disease. The guidelines established the need for close monitoring of LDL cholesterol in patients with coronary heart disease and set a target for LDL-C of less than or equal to 100 mg/dL for such patients. Cholesterol screening and control depends on the combined efforts of patient, physician and organization. Lifestyle factors and new medications offer tangible means for reducing cholesterol and the risk of heart disease.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients cardiovascular disease who need screening for adequate control of cholesterol. This project is scalable to any size population of eligible patients. The populations served will be the primary care and cardiology patients of the UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from cardiovascular disease are decreased with subsequent reduction of the costs of hospitalization for these patients. Screening for cholesterol in this population was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcomes identification number: 126686802.3.15

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.1 Breast Cancer Screening

This outcome measure is a measure of the number of eligible women who get screening mammography as a screen for breast cancer. The measure will be defined as follows:

Numerator: Number of eligible women aged 40 to 69 that have received an annual mammogram during the reporting period.

Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this measure will include the following:

DY2 – determination of baseline and create registry of eligible women; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Increase the percentage of eligible women who get screening mammography by: number to be determined over baseline
DY4 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY3
DY5 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY4

Data Source: EHR, Claims

Rationale

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of

and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. Mammogram provides such a test for women.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of breast cancer screening was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needed screening for breast cancer. This project is scalable to any size population of eligible women. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from breast cancer are prevented and the costs of hospitalization for breast cancer can be avoided. In addition, screening for breast cancer in eligible women was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number: 126686802.3.16

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.3 Colorectal Cancer Screening

Colon cancer is a common cause of cancer death and the outcomes of colon cancer can be improved by appropriate screening. This project will improve the rate of colon cancer screening in the targeted population. The definition of the measure will be as follows:

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings: fecal occult blood test yearly, flexible sigmoidoscopy every five years, or colonoscopy every 10 years
Denominator: Number of adults aged 50 to 75 in our patient population. Adults with colorectal cancer or total colectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this project include the following:

DY2 – establish baseline and registry for eligible patients; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop implementation strategy for colon cancer screening for eligible population
DY4 – increase percent of eligible patients that get screening by number **TBD**
DY5 – increase percent of eligible patients that get screening by number **TBD**

Data Source: EHR, Claims

Rationale

A Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. Title of Outcome Measure (Improvement Target): Pneumonia vaccination status for older adults

Unique RHP outcome identification number: 126686802.3.17

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-12.4 Pneumonia vaccination status for older adults

This project will evaluate the percent of eligible patients who get recommended vaccination for Pneumococcal pneumonia. The measure will be defined as follows:

Numerator: The number of eligible patients age 65 and older that have ever received a pneumonia vaccine

Denominator: Number of adults aged 64 and older in the patient or target population.

Process and Improvement Milestones

The milestones for this project will include the following:

DY2 – establish baseline and eligible patient registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Develop implementation plan for vaccination strategy
DY4 – increase the percent of eligible patients who get vaccination by number **TBD**
DY5 – increase the percent of eligible patients who get vaccination by number **TBD**

Data Source: EHR, Claims

Rationale

Vaccination of elderly patients for pneumococcal pneumonia is a well establish health maintenance performance measure. It is an effective preventive measure for this common condition that has a high mortality in the elderly. Measurement of the percent of patients in a population of elderly patients is a well established measure of quality of care in primary care practices.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the

medical needs of those patients identified as needing pneumococcal vaccine. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from pneumococcal pneumonia and sepsis are reduced and the costs of hospitalization for pneumococcal infection can be avoided. In addition, providing pneumococcal vaccination for eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Diabetes care: HgbA1c poor control (>9.0%) NQF 0059 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.18

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-1.10 Diabetes care: HgbA1c poor control (>9.0%)

This measure will assess how well diabetic patients have their blood glucose controlled. The definition of the measure is as follows:

- Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.
- Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2)
- This metric will be calculated quarterly for the primary care practice and for each individual provider. The proportion of patients with poor control will be trended and the outcome is to decrease this number by 10% in year 4 and 10% in year 5 if the proportion of patients with a HgbA1c more than 9% is greater than 15%. If the number is less than 15% the outcome metric will be to maintain the number at less than 15%. The milestones are as described in the valuation. A diabetes registry will be developed and data collected for all HgbA1c measurements for all diabetic patients. This registry and data will be validated and the accuracy of the registry and all administrative and clinical data will be checked and improved using a PDCA methodology. Reports will be given to providers at least quarterly

Process and Improvement Milestones

The milestones for this project include:

DY2 – establishment of baseline and registry of eligible diabetic patients in the population; Outcome Improvement Targets will be determined in DY2 for DY3 implementation

DY3 – establish treatment protocols and best practices for controlling glucose and test data systems

DY4 – decrease the percent of patients with HgbA1c > 0.9% by TBD

DY5 - decrease the percent of patients with HgbA1c > 0.9% by TBD

Rationale

Diabetes has been and remains a major cause of morbidity and mortality in the US. It is also one of the most costly and highly prevalent chronic diseases in this country. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if the disease is detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications.

A reliable method of assessing the control of diabetes is periodically measuring the glycosylated hemoglobin (HgbA1c) which provides a reliable estimate of the average glucose of patients over several weeks. Studies have shown that adequate control of diabetes as measured by HgbA1c reduces complications, prevents hospitalizations and prolong life and quality of life. Consequently, developing a system to monitor patients with diabetes with regular assessment of HgbA1c and intervening in those with levels indicating poor control of diabetes will improve the outcomes of these patients. If applied nationally diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of uncontrolled diabetes was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of diabetic patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from diabetes are prevented and the costs of hospitalization for complications from diabetes can be avoided. In addition, control of diabetes was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measures (Improvement Target): Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcomes identification number: 126686802.3.19

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.1 Breast Cancer Screening

This outcome measure is a measure of the number of eligible women who get screening mammography as a screen for breast cancer. The measure will be defined as follows:

Numerator: Number of eligible women aged 40 to 69 that have received an annual mammogram during the reporting period.

Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this measure will include the following:

DY2 – determination of baseline and create registry of eligible women; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Increase the percentage of eligible women who get screening mammography by: number to be determined over baseline
DY4 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY3
DY5 – Increase the percentage of eligible women who get screening mammography by: number to be determined over DY4

Data Source: EHR, Claims

Rationale

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier

and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. Mammogram provides such a test for women.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of breast cancer screening was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needed screening for breast cancer. This project is scalable to any size population of eligible women. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from breast cancer are prevented and the costs of hospitalization for breast cancer can be avoided. In addition, screening for breast cancer in eligible women was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measures (Improvement Target): Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number: 126686802.3.20

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-12.3 Colorectal Cancer Screening

Colon cancer is a common cause of cancer death and the outcomes of colon cancer can be improved by appropriate screening. This project will improve the rate of colon cancer screening in the targeted population. The definition of the measure will be as follows:

> Numerator: Number of adults aged 50 to 75 that have received one of the following screenings: fecal occult blood test yearly, flexible sigmoidoscopy every five years, or colonoscopy every 10 years
> Denominator: Number of adults aged 50 to 75 in our patient population. Adults with colorectal cancer or total colectomy are excluded.

Process and Improvement Milestones

The milestones that will be used for this project include the following:

> DY2 – establish baseline and registry for eligible patients; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
> DY3 – develop implementation strategy for colon cancer screening for eligible population
> DY4 – increase percent of eligible patients that get screening by number **TBD**
> DY5 – increase percent of eligible patients that get screening by number **TBD**
>
> Data Source: EHR, Claims

Rationale

A Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce the incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier

and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing screening for colon cancer. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from colon cancer are prevented and the costs of hospitalization for colon cancer can be avoided. In addition, screening for colon cancer in eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Pneumonia vaccination status for older adults

Unique RHP outcome identification number: 126686802.3.21

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-12.4 Pneumonia vaccination status for older adults

This project will evaluate the percent of eligible patients who get recommended vaccination for Pneumococcal pneumonia. The measure will be defined as follows:

Numerator: The number of eligible patients age 65 and older that have ever received a pneumonia vaccine

Denominator: Number of adults aged 64 and older in the patient or target population.

Process and Improvement Milestones

The milestones for this project will include the following:

DY2 – establish baseline and eligible patient registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – Develop implementation plan for vaccination strategy
DY4 – increase the percent of eligible patients who get vaccination by number **TBD**
DY5 – increase the percent of eligible patients who get vaccination by number **TBD**

Data Source: EHR, Claims

Rationale

Vaccination of elderly patients for pneumococcal pneumonia is a well establish health maintenance performance measure. It is an effective preventive measure for this common condition that has a high mortality in the elderly. Measurement of the percent of patients in a population of elderly patients is a well-established measure of quality of care in primary care practices.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as needing pneumococcal vaccine. This project is scalable to any size population of eligible patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from pneumococcal pneumonia and sepsis are reduced and the costs of hospitalization for pneumococcal infection can be avoided. In addition, providing pneumococcal vaccination for eligible patients was identified as one of the community priorities in the Community Needs Assessment.

Title of Outcome Measure (Improvement Target): Diabetes care: HgbA1c poor control (>9.0%) NQF 0059 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.22

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-1.10 Diabetes care: HgbA1c poor control (>9.0%)

This measure will assess how well diabetic patients have their blood glucose controlled. The definition of the measure is as follows:

- Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.
- Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2) at the UTSW University Hospitals and Clinics
- This metric will be calculated quarterly for the primary care practice and for each individual provider. The proportion of patients with poor control will be trended and the outcome is to decrease this number by 10% in year 4 and 10% in year 5 if the proportion of patients with a HgbA1c more than 9% is greater than 15%. If the number is less than 15% the outcome metric will be to maintain the number at less than 15%. The milestones are as described in the valuation. A diabetes registry will be developed and data collected for all HgbA1c measurements for all diabetic patients. This registry and data will be validated and the accuracy of the registry and all administrative and clinical data will be checked and improved using a PDCA methodology. Reports will be given to providers at least quarterly

Process and Improvement Milestones

The milestone for this project include

DY2 – establishment of baseline and registry of eligible diabetic patients in the population; Outcome Improvement Targets will be determined in DY2 for DY3 implementation
DY3 – establish treatment protocols and best practices for controlling glucose and test data systems
DY4 – decrease the percent of patients with HgbA1c > 9.0% by 3% from baseline

DY5 - decrease the percent of patients with HgbA1c > 9.0% by 3% from DY4

Data Source: EHR, Registry, Claims, Administrative clinical data

Rationale

Diabetes has been and remains a major cause of morbidity and mortality in the US. It is also one of the most costly and highly prevalent chronic diseases in this country. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if the disease is detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications.

A reliable method of assessing the control of diabetes is periodically measuring the glycosylated hemoglobin (HgbA1c) which provides a reliable estimate of the average glucose of patients over several weeks. Studies have shown that adequate control of diabetes as measured by HgbA1c reduces complications, prevents hospitalizations and prolong life and quality of life. Consequently, developing a system to monitor patients with diabetes with regular assessment of HgbA1c and intervening in those with levels indicating poor control of diabetes will improve the outcomes of these patients. If applied nationally diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

This measure relates to the project in that every institution is trying to improve the care of diabetic patients. The methodology in the course will allow each institution involved to develop performance improvement projects to improve care in all disease categories as well as diabetes. Trained Quality Improvement Champions will reduce costs in whatever institution they practice. We chose this one since it is a universal measure of diabetes control and studies have shown that each diabetic with good control of their blood sugar costs $5-6,000 less to care for than those without good control ($18,000/year vs $12,000/year)

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of uncontrolled diabetes was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of diabetic patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from diabetes are prevented and the costs of hospitalization for complications from diabetes can be avoided. In addition, control of diabetes was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measure (Improvement Target): All cause 30 day readmission rate-NQF 1789 (Standalone measure)

Unique RHP outcome identification number: 126686802.3.23

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-3.1 All cause 30 day readmission rate

This outcome measure will assess the readmission rate with the goal of reducing that rate over time. The definition of the measure will be the following:

Numerator: The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible Index admission. All readmissions are counted as outcomes except those that are considered planned.

Denominator: This claims-based measure will consist of the following cohorts: admissions to acute care facilities for patients aged 65 years or older who meet the specific diagnosis codes and exclusions in the RHP Planning Protocol at the UTSW University Hospitals.

Process and Improvement Milestones

The milestones for this project will include the following

DY2 – Establish baseline and evaluate the specific causes of readmission for the DRG categories specified; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop program specific interventions for categories identified as the cause for readmission
DY4 – reduce readmission rate by 2% from baseline
DY5 – reduce readmission rate by 2% from DY4

Data Source: EHR, Claims

Rationale

Readmissions to the hospital are an important cause of rising health care costs in the US and are widely considered a measure of the overall effectiveness of a health system. Reducing

these rates by transforming the care delivered outside of a hospital will significantly affect the quality of care delivered in the US and decrease costs.

Outcome Measure Valuation

Readmission to the hospital within 30 day markedly increased the cost of health care. Reducing the rate of readmissions by just a few percent will save avoidable costs which were estimated and used in the valuation of this project. This project is a high priority for UT Southwestern.

Title of Outcome Measure (Improvement Target): IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (*Standalone measure for Project 2.5)*

Unique RHP outcome identification number: 126686802.3.24

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

I IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (*Standalone measure for Project 2.5)*

The analysis used for this measure will be a Cost of Illness Analysis. The methodology will use the disease registries developed by our analytic team. The individual patients in the registries will be used to develop the cost of illness for episodes of illness and unique patients over time for patients with chronic diseases identified in the planning stage of this Cat 3 project. The disease categories will be selected based on high rates of utilization, costs or financial risk.

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3 – P-2 Establish baseline
P- 3 Develop and test data systems
P- 4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

DY4 - IT -5.1 Decrease cost of illness calculation for diseases identified in P-1 by X% from baseline

DY5 - IT -5.1 Decrease cost of illness calculation for diseases identified in P-1 by X% from DY4

Data Source: Planning records, administrative data, cost accounting system

Rationale

Decreasing cost of health care is an important priority of Region 9. An accurate cost accounting system is critical for an institution to be able to reduce costs of care effectively. Global cost of care are not sufficient for the rapid cycle improvements in costs that will be necessary for efficient delivery of care in the future. This project will assess the effectiveness of the cost accounting system as a component of improving efficiency of care delivery by the UT Southwestern Health System

Outcome Measure Valuation

The valuation of this Category 3 project is based on the value of a cost accounting system in the ambulatory setting in setting priorities and driving cost reducing methods of process improvement. Also taken into consideration is the cost of developing such a system

Title of Outcome Measure (Improvement Target): Diabetes care: HgbA1c poor control (>9.0%) NQF 0059 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.25

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW")/TPI 126686802

Outcome Measure Description

IT-1.10 Diabetes care: HgbA1c poor control (>9.0%)

This measure will assess how well diabetic patients have their blood glucose controlled. The definition of the measure is as follows:

- Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.
- Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2)
- This metric will be calculated quarterly for the primary care practice and for each individual provider. The proportion of patients with poor control will be trended and the outcome is to decrease this number by 10% in year 4 and 10% in year 5 if the proportion of patients with a HgbA1c more than 9% is greater than 15%. If the number is less than 15% the outcome metric will be to maintain the number at less than 15%. The milestones are as described in the valuation. A diabetes registry will be developed and data collected for all HgbA1c measurements for all diabetic patients. This registry and data will be validated and the accuracy of the registry and all administrative and clinical data will be checked and improved using a PDCA methodology. Reports will be given to providers at least quarterly

Process and Improvement Milestones

The milestone for this project include

DY2 – establishment of baseline and registry of eligible diabetic patients in the population; Outcome Improvement Targets will be determined in DY2 for DY3 implementation

DY3 – establish treatment protocols and best practices for controlling glucose and test data systems

DY4 – decrease the percent of patients with HgbA1c > 0.9% by TBD

DY5 - decrease the percent of patients with HgbA1c > 0.9% by TBD

Data Source: EHR, Registry, Claims, Administrative clinical data

Rationale

Diabetes has been and remains a major cause of morbidity and mortality in the US. It is also one of the most costly and highly prevalent chronic diseases in this country. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if the disease is detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications.

A reliable method of assessing the control of diabetes is periodically measuring the glycosylated hemoglobin (HgbA1c) which provides a reliable estimate of the average glucose of patients over several weeks. Studies have shown that adequate control of diabetes as measured by HgbA1c reduces complications, prevents hospitalizations and prolong life and quality of life. Consequently, developing a system to monitor patients with diabetes with regular assessment of HgbA1c and intervening in those with levels indicating poor control of diabetes will improve the outcomes of these patients. If applied nationally diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of uncontrolled diabetes was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of diabetic patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from diabetes are prevented and the costs of hospitalization for complications from diabetes can be avoided. In addition, control of diabetes was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measure (Improvement Target): All cause 30 day readmission rate-NQF 1789 (Standalone measure)

Unique RHP outcome identification number: 126686802.3.26

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-3.1 All cause 30 day readmission rate

This outcome measure will assess the readmission rate with the goal of reducing that rate over time. The definition of the measure will be the following:

Numerator: The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible Index admission. All readmissions are counted as outcomes except those that are considered planned.

Denominator: This claims-based measure will consist of the following cohorts: admissions to acute care facilities for patients aged 65 years or older who meet the specific diagnosis codes and exclusions in the RHP Planning Protocol.

Process and Improvement Milestones

The milestones for this project will include the following

DY2 – Establish baseline and evaluate the specific causes of readmission for the DRG categories specified; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop program specific interventions for categories identified as the cause for readmission
DY4 – reduce readmission rate by number **TBD**
DY5 – reduce readmission rate by number **TBD**

Data Source: EHR, Claims

Rationale

Readmissions to the hospital are an important cause of rising health care costs in the US and are widely considered a measure of the overall effectiveness of a health system. Reducing

these rates by transforming the care delivered outside of a hospital will significantly affect the quality of care delivered in the US and decrease costs.

Outcome Measure Valuation

Readmission to the hospital within 30 day markedly increased the cost of health care. Reducing the rate of readmissions by just a few percent will save avoidable costs which were estimated and used in the valuation of this project. This project is a high priority for UT Southwestern.

Title of Outcome Measure (Improvement Target): IT-1.20 Educated Primary Care Workforce

Unique RHP outcome identification number: 126686802.3.29

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

IT-1.20 Number of primary care practitioners in HPSAs or MUAs who report they plan to implement chronic disease management. A survey will be developed and validated to measure this metric in primary care providers participating in the CME project noted below

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems
DY4 - IT- 20.1 Increase the number of primary care physicians who report the plan to use chronic disease management by X (TBD) over baseline year
DY5 - IT- 20.1 Increase the number of primary care physicians who report the plan to use chronic disease management by X (TBD) over DY4

Data Source: Survey data and administrative data

Rationale

Chronic disease management strategies are known to decrease costs by decreasing hospitalization and utilization of other resources. Physicians and other providers need to be trained in the chronic disease management strategies to be effective. This outcome measure will provide an assessment of the success of those educational strategies.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses chronic disease management strategies in the care of patients with certain chronic diseases. This project will use a registry to identify patients, analyze clinical and administrative data and address the medical needs of those patients identified as having a chronic disease that is amenable to a chronic disease management plan. The populations served will be primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from

chronic disease are common and the costs of hospitalization for these complications can be avoided.

Title of Outcome Measure (Improvement Target): IT-14.2 Number of practicing nurse practitioners and physician assistant per 1000 individuals in HPSAs or MUAs

Unique RHP outcome identification number: 126686802.3.30

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

IT-14.1 Number of practicing primary care practitioners per 1000 individuals in HPSAs or MUAs. The goal is to increase the number of primary care practitioners by education to family practice residents
on the concepts and advantages of the Patient-Center medical Home (PCMH). This outcome is important to address the need of more primary care physicians for Texas

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems
DY4 - IT- 14.1 Increase the number of practicing primary care practitioners per 1000 individuals in HPSAs or MUAs by X (TBD) over baseline
DY5 - IT- 14.1 Increase the number of practicing primary care practitioners per 1000 individuals in HPSAs or MUAs by X (TBD) over DY4

Data Source: HR data and administrative data

Rationale

The need for primary care practitioners is well documented in the Community Needs Assessment nd from the literature. One method of promoting primary care has been to introduce the Patient-Centered Medical Home as a delivery model to make primary care more attractive to trainees. This ourcome measurement will be used to assess the success of that project and strategy.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that promotes the benefits of practicing in a primary care setting. This project provide great

benefit to patients of primary care practices who use the concepts and principles of the Patient-Centered Medical Home (PCMH). The populations served will be primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project as well as the patients of our Family Medicine resident clinic. The community benefit is obvious as the primary care work force is increased..

Title of Outcome Measures (Improvement Target): (IT-14.2) Number of practicing nurse practitioners and physician assistants per 1000 individuals in HPSAs or MUAs

Unique RHP outcome identification number: 126686802.3.31

Performing provider: UT Southwestern Medical Center Practice Plan/126686802

Outcome Measure Description:
IT-14.2 Number of practicing nurse practitioners and physician assistants per 1000 individuals in HPSAs or MUAs (*Standalone measure*)

This outcome measure will support a project that significantly increases the size of the physician assistant training program at UT Southwestern Medical Center. The purpose of this measure is to assess the effectiveness of this program in placing graduates in HPSAs or MUAs.

Rationale: This measure is needed to assess the effectiveness of the UTSW physician assistant training program in supporting the community goal of increasing the number of primary care providers serving Medicaid or other medically underserved populations. Since the increase in graduates will not be immediate, the outcomes will not be seen immediately.

DY2

Milestone(s): P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3

Milestone(s): P-2 Establish baseline rates

DY4

IT-14.2 Outcome improvement target – increase the number of practicing nurse practitioners and physician assistants per 1000 individuals in HPSAs or MUAs by X% over baseline.

DY5

IT-14.2 Outcome improvement target – increase the number of practicing nurse practitioners and physician assistants per 1000 individuals in HPSAs or MUAs by X% over DY4.

Outcome Measure Valuation: The valuation of this project outcome was based on the cost of training of physician assistant students and the benefit to Region 9 patients of having increased number of physician assistants providing primary or other care to underserved populations. Because the benefit will be after increased number of trainees matriculate, most of the valuation is in year DY4 and DY5.

Title of Outcome Measure (Improvement Target): Controlling high blood pressure NCQA-HEDIS 2012, NQF 0018 (Standalone Measure)

Unique RHP outcome identification number: 126686802.3.32

Performing provider name/TPI: The University of Texas Southwestern Medical Center ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-1.7 Controlling high blood pressure

This measure will assess the number of patients with hypertension who have their blood pressure controlled to at least 140/90 during the measurement year. The measure will be defined as:

Numerator: The number of patients in the denominator whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year

Denominator: Patients 18 to 85 years of age as of December 31 of the measurement year with a diagnosis of hypertension

Process and Improvement Milestones

Milestone of this project will include:

DY2 – assessment of baseline percent of patients controlled of study population and establishment of hypertension registry; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – increase the percent of patients with adequate hypertension control by **TBD**
DY4 - increase the percent of patients with adequate hypertension control by **TBD**
DY5 - increase the percent of patients with adequate hypertension control by **TBD**

Data Source: EHR, Claims

Rationale

Approximately 76.4 million (33.5 percent) of people in the United States have high blood pressure. Numerous clinical trials have shown that aggressive treatment of high blood pressure reduces mortality from heart disease, stroke and renal failure; results are particularly striking in elderly hypertensive patients, which are more likely to have heart failure. A pool of past clinical trials demonstrated that a 5 mm to 6 mm Hg reduction in diastolic blood pressure was associated with a 42 percent reduction in stroke mortality and a 14 percent to 20 percent reduction in mortality from coronary heart disease (CHD). Literature from clinical trials indicates

that 53 percent to 75 percent of people under treatment achieved control of their blood pressure. The specifications for this measure are consistent with current guidelines, such as those of the USPSTF and the Joint National Committee.

Outcome Measure Valuation

In the rationale for this project, the magnitude of the problem of uncontrolled hypertension was addressed. The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications. This project is scalable to any size population of hypertensive patients. The populations served will be the primary care patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from hypertension are prevented and the costs of hospitalization for complications from hypertension can be avoided. In addition, control of hypertension was identified as one of the community priorities in the Community needs assessment.

Title of Outcome Measure (Improvement Target): IT-9.2 ED appropriate utilization *(Standalone measure)*

Unique RHP outcome identification number: 126686802.3.33

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

IT-9.2 ED appropriate utilization *(Standalone measure)*

Reduce Emergency Department visits for target conditions. Provider has chosen cancer patient

Data Source: EHR, Claims

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems

DY4 - IT- 9.2 Decrease the number of ER visits for cancer patients follow in the Simmons Comprehensive Cancer Center by X (TBD) from baseline

DY5 - IT- 9.2 Decrease the number of ER visits for cancer patients follow in the Simmons Comprehensive Cancer Center by X (TBD) from DY4

Data Source: EHR, Claims

Rationale

Patients being treated for cancer have many complications from their disease and from the treatment. Treatment for non-emergent conditions that arise in cancer patients should be carried out in the outpatient setting whenever possible to reduce the risk of hospital acquired conditions and reduce the cost of care. This outcome measure will assess the effectiveness of an urgent care system for cancer patients on ER utilization.

Outcome Measure Valuation

The valuation of the milestones includes reduced costs and potential benefits of developing a system that reduces emergency room visits for cancer patients with urgent but no emergent medical needs. We will use a cancer registry to identify cancer patients, analyze clinical and administrative data and address the medical needs of those patients identified as having a high risk of needing urgent care because of their cancer and its treatment. The populations served will be oncology patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications

from cancer treatment are common and the costs of emergency department visits for these complications can be avoided as well as the added risk immune-suppressed patient have with visiting an emergency room.

Title of Outcome Measure (Improvement Target): IT 2.13 Other Admissions Rate (Cancer) *(Standalone measure)*

Unique RHP outcome identification number: 126686802.3.34

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

IT 2.13 Other Admissions Rate (Cancer) *(Standalone measure).* The provider has chosen cancer patients with complications of cancer treatment for this admission measure

Numerator: Number of admissions for complications of cancer treatment in patients 18 years or older

Denominator: Number of cancer patients 18 years old or greater in UTSW faculty practice who are being treated for cancer.

Data Source: EHR, Claims

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems
DY4 - IT- 3.13 Decrease the admission rate for patients with cancer with treatment related complications by X% (TBD) from baseline
DY5 - IT- 3.13 Decrease the admission rate for patients with cancer with treatment related complications by X% (TBD) from DY4

Data Source: EHR, Claims

Rationale

The relationship between hospital admission rates and quality of care is well-documented and may relate to complications from cancer treatment rather than the cancer itself. Cancer patients in particular have high treatment complication rates and hospitalization for those complications puts these immune-suppressed patients at high risk for hospital acquired infections. It is important to decrease this cause of admission to improve cancer patient's quality of life and survival overall.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify cancer patients, analyze clinical and administrative data and address the medical needs of those patients identified as having a high risk of developing complications of cancer and its treatment. The populations served will be oncology patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from cancer treatment are common and the costs of hospitalization for these complications can be avoided as well as the added risk immune-suppressed patient have with hospitalization

Title of Outcome Measure (Improvement Target): All cause 30 day readmission rate-NQF 1789 (Standalone measure)

Unique RHP outcome identification number: 126686802.3.35

Performing provider name/TPI: The University of Texas Southwestern Medical Center - Faculty Practice Plan ("UT Southwestern" or "UTSW"/TPI 126686802

Outcome Measure Description

IT-3.1 All cause 30 day readmission rate

This outcome measure will assess the readmission rate with the goal of reducing that rate over time. The definition of the measure will be the following:

Numerator: The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible Index admission. All readmissions are counted as outcomes except those that are considered planned.
Denominator: This claims-based measure will consist of the following cohorts: admissions to acute care facilities for patients aged 65 years or older who meet the specific diagnosis codes and exclusions in the RHP Planning Protocol.

Process and Improvement Milestones

The milestones for this project will include the following

DY2 – Establish baseline and evaluate the specific causes of readmission for the DRG categories specified; Outcome Improvement Targets will be determined in DY2 for DY3 implementation.
DY3 – develop program specific interventions for categories identified as the cause for readmission
DY4 – reduce readmission rate by number **TBD**
DY5 – reduce readmission rate by number **TBD**

Data Source: EHR, Claims

Rationale

Readmissions to the hospital are an important cause of rising health care costs in the US and are widely considered a measure of the overall effectiveness of a health system. Reducing these rates by transforming the care delivered outside of a hospital will significantly affect the quality of care delivered in the US and decrease costs.

Outcome Measure Valuation

Readmission to the hospital within 30 day markedly increased the cost of health care. Reducing the rate of readmissions by just a few percent will save avoidable costs which were estimated and used in the valuation of this project. This project is a high priority for UT Southwestern.

Title of Outcome Measure (Improvement Target): IT-3.12 Other - readmission rate (Medication complications) *(Standalone measure)*

Unique RHP outcome identification number: 126686802.3.36

Performing provider name/TPI: The University of Texas Southwestern Medical Center/ TPI 126686802

Outcome Measure Description

IT-3.12 Other - readmission rate [*To be selected by provider*] *(Standalone measure).* The provider chooses complications of medications readmissions for this readmission project.

Numerator: The number of readmissions (for patients 18 years and older) for complications of medications from the index admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with any diagnosis and with a complete claims history for the 12 months prior to admission.

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems
DY4 - IT- 3.12 Decrease the readmission rate for patients with complications from medication by X% (TBD) from baseline
DY5 - IT- 3.12 Decrease the readmission rate for patients with complications from medications by X% (TBD) from DY4

Data Source: EHR, Claims

Rationale

The relationship between hospital readmission rates and quality of care is well-documented. Some readmissions are caused from medication complications from the index admissions or from circumstances surrounding the initial hospital stay. Patients who take a large number of medications in particular have high hospital readmission rates and high rates are considered by

some as an indication of weakness in the overall care of patients with a particular condition. Only readmissions to the same facility will be included as part of each hospital's rates.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications of medications. The populations served will be al patients admitted to UT Southwestern University Hospitals and seen UT Southwestern clinics. The community benefit is obvious as complications from medication treatment are common and the costs of hospitalization for these complications can be avoided.

Title of Outcome Measures (Improvement Target): IT-1.20: Other outcomes improvement target. Outcomes of bone marrow and solid organ transplantation.

Unique RHP outcomes identification number: 175287501.3.1

Performing provider: The University of Texas Southwestern University Hospitals/ 175287501

Outcome Measure Description

IT-1.20: Other Outcome

This measure will examine the 1 year survival of patients who get a bone marrow or solid organ transplant. The percentage will be compared with established national and regional metrics. The definition of the measure will be as follows:

Numerator: number of patients alive at the one year anniversary of their transplant.
Denominator: Number of eligible patients transplanted
The metric will then be compared to national metrics for each type of transplant.

Process and Improvement Milestones

The milestones for this project will be as follows:

DY2 – establish mechanism of obtaining referrals of underfunded medically eligible patients.
DY3 – evaluate eligible patients for transplant suitability and if eligible, list patient for appropriate transplant
DY4 – 10 underfunded patients will be listed. Transplanted patients will have 1 year mortality equal to regional average using 95% confidence interval
DY5 – 20 underfunded patients will be listed. Transplanted patients will have 1 year mortality equal to regional average using 95% confidence interval

Rationale

The goal of this project is to address a major disparity in access to specialty care for patients with inadequate funding. That disparity involves the availability of bone marrow and solid organ transplantation. Despite contributing significantly to the donation of organs and tissue for transplantation, these patients do not, many times, receive these life-saving procedures because of a lack of adequate funding.

UT Southwestern is a nationally recognized center for solid organ and bone marrow transplantation services and has outcomes for these services that rank in the top tier of the United States. Currently, indigent and Medicaid patients are less likely to receive needed bone marrow, heart, lung and liver transplants when compared to matched patients with funding through Medicare or commercial insurance. We propose a program to address this disparity by offering these transplant services to medically eligible patients through our current transplant programs.

Outcome Measure Valuation:
The valuation of this project is based on the potential benefit these patients will receive from the needed transplant and the cost of providing the evaluation, transplant itself and related post-transplant care. These services are currently provided to patients with adequate funding and the delta between the cost of providing the care and benefit enjoyed by the underfunded patients. This project will address a significant disparity in care between funded patients and underfunded patients.

Title of Outcome Measure (Improvement Target): IT-2.12: Prevention Quality Indicators (PQI) Composite Measures Potentially Preventable Hospitalizations for Ambulatory Care Sensitive Conditions *(Standalone measure)*

Unique RHP outcome identification number: 1752287501.3.2

Performing provider name/TPI: The University of Texas Southwestern University Hospitals/TPI 175287501

Outcome Measure Description

Numerator: Composites are constructed by summing the hospitalizations across the component conditions and dividing by the population. Rates can optionally be adjusted for age, sex and socio-economic status when comparing across regions or demographic groups.

Data Source: EHR, Claims

Rationale/Evidence: An overall composite captures the general concept of potentially avoidable hospitalization connecting the individual PQI measures, which are all rates at the area level. Separate composite measures were created for acute and chronic conditions to investigate different factors influencing hospitalization rates for each condition. The PQI composites are intended to be used to provide national estimates that can be tracked over time and to provide state and county level estimates that can be compared with the national estimate and to each other.

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P-1 Project planning
DY3 – P- 2 Establish baseline rate
P- 3 Develop and test data systems
DY4 – IT-2.12 Decrease composite by 5% from baseline
DY5 - IT-2.12 Decrease composite by 5% from DY4

Data Source: EHR, Claims

Rationale

The project will capture the three overall composites outlined in the RHP 9 planning protocol: PQI 90 – overall composite, PQI 91 – acute composite, and PQI 92 – chronic composite. These composites will be calculated using the methodology and conditions outlined in the planning protocol.

Rationale/Evidence: An overall composite captures the general concept of potentially avoidable hospitalization connecting the individual PQI measures, which are all rates at the area level. Separate composite measures were created for acute and chronic conditions to investigate different factors influencing hospitalization rates for each condition. The PQI composites are intended to be used to provide national estimates that can be tracked over time and to provide state and county level estimates that can be compared with the national estimate and to each other.

Related Category 1 or 2 Projects

- 175287501.2.1—Implementation of an emergency department patient navigation system

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that connects patients to primary care providers if they do not have such a relationship when seen in the ED. This project will serve all patients seen but Medicaid patients frequently do not have adequate follow up with a primary care physician so they should benefit significantly. Currently, the ED at UT Southwestern University hospitals sees 33-35,000 visits per year. Of these patients, approximately 11% are unfunded or have Medicaid and 30% do not have an identified Primary Care Physician (PCP) using third quarter 2012 data. The target population will be the 9,900 – 10,500 patients seen in the Emergency Department without a primary care physician. We estimate that 1080 – 1150 of these patients will have Medicaid or be indigent based on the above numbers and percentages. The cost avoidance realized in this project will be measured by reduced preventable admissions. During the baseline determination, the project will determine the number of preventable admissions then reduce those admissions by 5% during DY4 and DY5 each. According to the RHP 9 Needs Assessment, each of the avoided admissions will save Medicaid patients $47,500.

Significant avoidable cost will be realized to the system if hospitalization can be avoided in these patients. The community benefit is obvious as primary care is facilitated and hospitalizations prevented.

The anchor, Parkland Health System, established six (6) criteria, to be rated based on a 10-point scale. The ratings for each criteria were weighted, summed for each project to arrive at a total score (value weight) per project. The total score per project was divided by the percent of total DSRIP funds available for that year, arriving at a dollar value multiplier to be applied towards each project's total score (value weight). This method apportioned available funds towards those projects valued highest. UT Southwestern used this approach, with the following exceptions. First, we selected the following criteria as being most significant to differentiate between projects: (i) Transformational Impact, (ii) Population Serviced/Project Size, (iii) Aligned with Community Needs, (iv) Cost Avoidance, and (v) Sustainability. Second, we began with a 5-

point scale for each criteria rated, and then doubled the score to put it on a 10-point scale. Following are the criteria, the way points were awarded for projects using that criteria:

1. Transformational Impact (Weigh– 1 point for each of the following: improves access; improves quality; improves costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

This project's score for this criteria: 2 X 2 = 4

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected. Score - Four points for the whole population, 3 points for a relatively large population, 2 points for a moderate-sized population, and 1 point for a relatively small population.

This project's score for this criteria: 1.8 X 2 = 3.6

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses. Score A - CNA indication: 2 points for strong support (bottom 25%), 1 point for moderate support. Score B - Severity: 3 points for issues judged to have significant impact on population health, healthcare access, and quality; 2 points for moderate severity issues.

This project's score for this criteria: 1.75 X 2 = 3.5

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project's cost effectiveness relative to similar projects. Score – 5 points for very low cost per person, 4 points for low cost per person, 3 points for moderate cost per person, 2 points for high cost per person, 1 point for very high cost per person.

This project's score for this criteria: 2 X 2 = 4

5. Sustainability (Weight = 15%): Points were awarded based on judgment of project's sustainability relative to other projects. Score – 5 points for very sustainable, 4 points for high sustainability, 3 points for moderate sustainability, 2 points for somewhat sustainable, 1 point for low sustainability.

This project's score for this criteria: 2 X 2 = 4

Total Valuation Score for this project: 8.80

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 175287501.3.3

Performing Provider Name/TPI: The UT Southwestern University Hospital/ 175287501

Outcome Measure Description:

Timely pain assessment has been identified as a key determinant of quality of life and degree of satisfaction with care in patients needing palliative care services. For this reason we have chosen the following improvement outcome for this project.

IT-13.1 Pain assessment (NQF-1637) (Non-standalone measure)
Increase the number of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.

Process Milestones:

DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:
Increase to 75% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
DY5:
Increase to 90% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.

Rationale:

Reasearch shows that the prevalence of pain among patients with incurable illness and at the end of life is high. In addition pain severity is underrecognized by clinicians and undertreated,

resulting in excess suffering among these patients. Pain screening and assessments will thus be a good measure of the quality of palliative care services provided to patients.

It is expected that this new service at the University Hospitals and Clinics will care for 900 inpatients consultations of which 100 will be Medicaid patients and account for 3000 outpatient visits over the span of the project of which 90 will be Medicaid patients in need of palliative care services.

Outcome Measure Valuation:

The anchor, Parkland Health System, established six (6) criteria, to be rated based on a 10-point scale. The ratings for each criteria were weighted, summed for each project to arrive at a total score (value weight) per project. The total score per project was divided by the percent of total DSRIP funds available for that year, arriving at a dollar value multiplier to be applied towards each project's total score (value weight). This method apportioned available funds towards those projects valued highest. UT Southwestern used this approach, with the following exceptions. First, we selected the following criteria as being most significant to differentiate between projects: (i) Transformational Impact, (ii) Population Serviced/Project Size, (iii) Aligned with Community Needs, (iv) Cost Avoidance, and (v) Sustainability. Second, we began with a 5-point scale for each criteria rated, and then doubled the score to put it on a 10-point scale. Following are the criteria, the way points were awarded for projects using that criteria:

1. Transformational Impact (Weight = 20%): Points were awarded for projects that meet the community benefit criteria. Score – 1 point for each of the following: improves access; improves quality; improves costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

   This project's score for this criteria: 3 X 2 = 6

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected. Score - Four points for the whole population, 3 points for a relatively large population, 2 points for a moderate-sized population, and 1 point for a relatively small population.

   This project's score for this criteria: 2.5 X 2 = 5

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses. Score A - CNA indication: 2 points for strong support (bottom 25%), 1 point for moderate support. Score B - Severity: 3 points for issues judged to have significant impact on population health, healthcare access, and quality; 2 points for moderate severity issues.

   This project's score for this criteria: 3.5 X 2 = 7

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project's cost effectiveness relative to similar projects. Score – 5 points for very low cost per person, 4 points for low cost per person, 3 points for moderate cost per person, 2 points for high cost per person, 1 point for very high cost per person.

This project's score for this criteria: 2.45 X 2 = 4.90

5. Sustainability (Weight = 15%): Points were awarded based on judgment of project's sustainability relative to other projects. Score – 5 points for very sustainable, 4 points for high sustainability, 3 points for moderate sustainability, 2 points for somewhat sustainable, 1 point for low sustainability.

This project's score for this criteria: 3 X 2 = 6

Total Valuation Score for this project: **5.49**

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed equally across the projects' related Category 3 measures.

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 175287501.3.4

Performing Provider Name/TPI: The University of Texas Southwestern University Hospital/ 175287501

Outcome Measure Description:

Helping patients in need of end of life care with documentation of life sustaining preferences and enrollment in appropriate hospice care is important to maintain quality of care for patients with life threatening disease. For this reason, we have chosen the followin as one of the improvement measurements for this project.

IT-13.2 Treatment Preferences (NQF 1641) (Non-standalone measure)
Percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.

Process Milestones:

DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
Increase to 75% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.
DY5:
Increase to 90% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.

Rationale:
In the absence of a clear guideline for end-of-life care, care decisions are often taken by the physician/care team and this tends to be in favor of life sustaining treatments. As a result of these aggressive treatments, many expensive interventions are given to patients in the last few months of life with poor and questionable outcomes. Site of death accounts for significant

variation in end-of-life costs. Medicare beneficiaries who die in a hospital inpatient setting have been found to be twice those for beneficiaries who died in other settings such as their homes . Palliative care services address these imbalances and this measure assesses the success of the project by assessing how much patient preferences are being respected.

It is expected that this new service at the University Hospitals and Clinics will care for 900 inpatients consultations of which 100 will be Medicaid patients and account for 3000 outpatient visits over the span of the project of which 90 will be Medicaid patients in need of palliative care services.

Outcome Measure Valuation:

The anchor, Parkland Health System, established six (6) criteria, to be rated based on a 10-point scale. The ratings for each criteria were weighted, summed for each project to arrive at a total score (value weight) per project. The total score per project was divided by the percent of total DSRIP funds available for that year, arriving at a dollar value multiplier to be applied towards each project's total score (value weight). This method apportioned available funds towards those projects valued highest. UT Southwestern used this approach, with the following exceptions. First, we selected the following criteria as being most significant to differentiate between projects: (i) Transformational Impact, (ii) Population Serviced/Project Size, (iii) Aligned with Community Needs, (iv) Cost Avoidance, and (v) Sustainability. Second, we began with a 5-point scale for each criteria rated, and then doubled the score to put it on a 10-point scale. Following are the criteria, the way points were awarded for projects using that criteria:

1. Transformational Impact (Weight = 20%): Points were awarded for projects that meet the community benefit criteria. Score – 1 point for each of the following: improves access; improves quality; improves costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

   This project's score for this criteria: 3 X 2 = 6

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected. Score - Four points for the whole population, 3 points for a relatively large population, 2 points for a moderate-sized population, and 1 point for a relatively small population.

   This project's score for this criteria: 2.5 X 2 = 5

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses. Score A - CNA indication: 2 points for strong support (bottom 25%), 1 point for moderate support. Score B - Severity: 3 points for issues judged to have significant impact on population health, healthcare access, and quality; 2 points for moderate severity issues.

This project's score for this criteria: 3.5 X 2 = 7

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project's cost effectiveness relative to similar projects. Score – 5 points for very low cost per person, 4 points for low cost per person, 3 points for moderate cost per person, 2 points for high cost per person, 1 point for very high cost per person.

This project's score for this criteria: 2.45 X 2 = 4.90

5. Sustainability (Weight = 15%): Points were awarded based on judgment of project's sustainability relative to other projects. Score – 5 points for very sustainable, 4 points for high sustainability, 3 points for moderate sustainability, 2 points for somewhat sustainable, 1 point for low sustainability.

This project's score for this criteria: 3 X 2 = 6

Total Valuation Score for this project: **5.49**

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed equally across the projects' related Category 3 measures.

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 175287501.3.5

Performing Provider Name/TPI: The University of Texas Southwestern University Hospital/ 175287501

Outcome Measure Description:

Spiritual and religious concerns regarding the process of dying are a frequently overlooked need in patients receiving palliative care. For this reason we have chosen the following improvement measure for this project.

IT-13.5 Percentage of patients receiving hospice or palliative care services with documentation in the clinical record of a discussion of spiritual/religions concerns or documentation that the patient/caregiver did not want to discuss. (NQF 1647 modified) (Non-standalone measure)

Increase the number of patients discharged from hospice or palliative care with clinical record documentation of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.

Process Milestones:

DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:
Increase to 75% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.
DY5:
Increase to 90% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.

Rationale:

A comprehensive interdisciplinary approach is one of the hallmarks of pallaitive care, and this entails caring for the physical, psychosocial, and spiritual needs of patients and their families. An essential step to providing for the needs of patients is initiating discussions about their spiritual concerns. This measure will thus be an important indicator of the quality of palliative care provided throught this project.
It is expected that this new service at the University Hospitals and Clinics will care for 900 inpatients consultations of which 100 will be Medicaid patients and account for 3000 outpatient visits over the span of the project of which 90 will be Medicaid patients in need of palliative care services.

Outcome Measure Valuation:

The anchor, Parkland Health System, established six (6) criteria, to be rated based on a 10-point scale. The ratings for each criteria were weighted, summed for each project to arrive at a total score (value weight) per project. The total score per project was divided by the percent of total DSRIP funds available for that year, arriving at a dollar value multiplier to be applied towards each project's total score (value weight). This method apportioned available funds towards those projects valued highest. UT Southwestern used this approach, with the following exceptions. First, we selected the following criteria as being most significant to differentiate between projects: (i) Transformational Impact, (ii) Population Serviced/Project Size, (iii) Aligned with Community Needs, (iv) Cost Avoidance, and (v) Sustainability. Title of Outcome Measure (Improvement Target): IT-3.12 Other - readmission rate (Cancer) *(Standalone measure)*

Unique RHP outcome identification number: 175287501.3.6

Performing provider name/TPI: The University of Texas Southwestern University Hospitals/ TPI 175287501

Outcome Measure Description

IT-3.12 Other - readmission rate [*To be selected by provider*] *(Standalone measure).* The provider chooses cancer admissions for this readmission project.

Numerator: The number of readmissions (for patients 18 years and older), for any cause, from the index admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of Cancer and with a complete claims history for the 12 months prior to admission.

Process and Improvement Milestones

Milestone of this project will include:

DY2 – P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3 – P- 2 Establish baseline rates
P- 3 Develop and test data systems
DY4 - IT- 3.12 Decrease the readmission rate for patients with cancer by X% (TBD) from baseline
DY5 - IT- 3.12 Decrease the readmission rate for patients with cancer by X% (TBD) from DY4

Data Source: EHR, Claims

Rationale

The relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay. Cancer patients in particular have high hospital readmission rates and high rates are considered by some as an indication of weakness in the

overall care of patients with a particular condition. Only readmissions to the same facility will be included as part of each hospital's rates.

Outcome Measure Valuation

The valuation of the milestones includes costs and potential benefits of developing a system that uses a registry to identify patients, analyze clinical and administrative and address the medical needs of those patients identified as having a high risk of developing complications of cancer and its treatment. The populations served will be oncology patients of UT Southwestern faculty practice and the affiliated primary care network described in a previous project. The community benefit is obvious as complications from cancer treatment are common and the costs of hospitalization for these complications can be avoided.

Title of Outcome Measures (Improvement Target): IT-4.2 Central line-associated bloodstream infections (CLABSI) rates *(Standalone measure)*

Unique RHP outcomes identification number: 175287501.3.7

Performing provider: The University of Texas Southwestern University Hospitals/ 175287501

Outcome Measure Description

Transplant patients are immunosuppressed by rejection preventing medications so are more likely to suffer from infectious complications of treatment. One of the complications is blood stream infections secondary to central line catheters. Many of these infections are considered preventable. Decreasing the number of these infections has been identified by AHRQ as a high priority .

Numerator: Number of cases of CLABSI as designated by IQR criteria251

Data Source: EHR, Claims, IQR/NHSN data

Process and Improvement Milestones

The milestones for this project will be as follows:

DY2 – P-2 establish baseline rates of central line infections in transplanted patients
P-3 Develop and test data systems
DY3 – P- 4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
DY4 – Decrease the number of central line related blood stream infections in target transplant patients by 10 percent from baseline
DY5 – Decrease the number of central line related blood stream infections in target transplant patients by 10 percent from DY4

Rationale

Rationale/Evidence: An estimated 41,000 central line-associated bloodstream infections (CLABSI) occur in U.S. hospitals each year. These infections are usually serious infections typically causing a prolongation of hospital stay and increased cost and risk of mortality. CLABSI can be prevented through proper management of the central line. These techniques are addressed in the CDC's Healthcare Infection Control Practices Advisory Committee (CDC/HIPAC) Guidelines for the Prevention of Intravascular Catheter-Related Infections, 2011. This complications is particularly severe in immunosuppressed partients.

Outcome Measure Valuation:

The valuation of this project is based on the potential benefit these patients will receive from the needed transplant and the cost of providing the evaluation, transplant itself and related post-transplant care. Prevention of a single central line infection has been estimate to save $40,000 in avoidable costs.

The valuation of this project takes into account two factors. First, the number of patients that need to be evaluated to result in one transplant was considered. The cost of this evaluation is significant and must be borne by the performing provider when outside funding does not exist. The cost of the transplant and recovery with follow up care was also considered. In addition, the number of patients who need bridging with a VAD (ventricular assistance device) was considered for the heart transplant patients. Finally, the possible avoidable cost of recurrent hospitalizations for chronic conditions precipitating the consideration for transplant for the patients, especially if the program is later scaled to a larger population, was an important factor if community and future medical costs are considered. Patients with severe chronic liver disease, congestive heart failure and chronic lung disease who would be considered for transplant utilize inpatient services in the form of recurrent hospitalizations to stabilize their chronic condition. Transplantation offers the advantage over medical treatment of these patients of decreasing the need for recurrent hospitalization and improving overall quality of life (Jarl and Gerdtham, 2011).

The anchor, Parkland Health System, established six (6) criteria, to be rated based on a 10-point scale. The ratings for each criteria were weighted, summed for each project to arrive at a total score (value weight) per project. The total score per project was divided by the percent of total DSRIP funds available for that year, arriving at a dollar value multiplier to be applied towards each project's total score (value weight). This method apportioned available funds towards those projects valued highest. UT Southwestern used this approach, with the following exceptions. First, we selected the following criteria as being most significant to differentiate between projects: (i) Transformational Impact, (ii) Population Serviced/Project Size, (iii) Aligned with Community Needs, (iv) Cost Avoidance, and (v) Sustainability. Second, we began with a 5-point scale for each criteria rated, and then doubled the score to put it on a 10-point scale. Following are the criteria, the way points were awarded for projects using that criteria:

1. Transformational Impact (Weight = 20%): Points were awarded for projects that meet the community benefit criteria. Score – 1 point for each of the following: improves access; improves quality; improves costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

   This project's score for this criteria: 4.5 X 2 = 9

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected. Score - Four points for the whole population, 3 points for a

relatively large population, 2 points for a moderate-sized population, and 1 point for a relatively small population.

This project's score for this criteria: 4.5 X 2 = 9

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses. Score A - CNA indication: 2 points for strong support (bottom 25%), 1 point for moderate support. Score B - Severity: 3 points for issues judged to have significant impact on population health, healthcare access, and quality; 2 points for moderate severity issues.

This project's score for this criteria: 4.5 X 2 = 9

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project's cost effectiveness relative to similar projects. Score – 5 points for very low cost per person, 4 points for low cost per person, 3 points for moderate cost per person, 2 points for high cost per person, 1 point for very high cost per person.

This project's score for this criteria: 5 X 2 = 10

5. Sustainability (Weight = 15%): Points were awarded based on judgment of project's sustainability relative to other projects. Score – 5 points for very sustainable, 4 points for high sustainability, 3 points for moderate sustainability, 2 points for somewhat sustainable, 1 point for low sustainability.

This project's score for this criteria: 4.84 X 2 = 9.67

Total Valuation Score for this project: 8.80

These values are provided for in the table below and are allocated equally amongst the milestones

F. Category 4: Population-Focused Improvements (Hospitals Only)

Performing Provider Name: Baylor Medical Center at Carrollton

Texas Provider Identifier: 195018001

Baylor Medical Center at Carrollton will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Baylor Medical Center at Carrollton healthcare reporting system indicates further refinement and definition will be required for some of the required metrics. The reporting system has the capability to track and report the required measurements but will require additional work to get the exact required specifications. New system implementation and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)
Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 8 of the eight measurements are being tracked and reported at Baylor Medical Center at Carrollton. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Carrollton patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Carrollton will expand the existing data collecting system, and optimize the old system for new reporting processes.
The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Carrollton has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

The PPA domain in Category 4 has 8 components. Although the impact of the Baylor Medical Center at Carrollton's DSRIP projects on the PPA domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPA domain. The projects and outcomes listed below will help to reduce/prevent

PPAs in patients who engage in these programs, are actively managed and have their conditions under control.
The table below summarizes the projects and outcomes that potentially relate to the PPA domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD1- PPA						
Cat 1, 2, & 3	1.1	1.2	1.3	1.4	1.5	1.7	1.8
195018001.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X	X		X	X	X	X
IT 1.7 Controlling high blood pressure					X		
IT 12.5 Influenza Vaccination rate							X
195018001.2.1: Expand Chronic Care Management Model- Create Chronic Disease management and Prevention Program	X	X		X	X		
IT 1.10 Diabetes HbA1c poor control		X					
IT 1.11 Diabetes BP control		X					
IT 1.13 Diabetes Foot exam		X					
195018001.2.3: Establish/Expand a Patient Care Navigation Program- Care Connect	X	X	X	X	X		
195018001.2.2 : Develop Care Management Function that Integrates Primary and Behavioral Health Needs of Individuals- Behavioral Health Counseling, Screening and Treatment	X	X	X	X		X	X
IT 11.1 Diabetes Management for underserved with BH diagnoses		X					
IT 11.3 improve utilization rate of clinical preventive services f or BH			X				

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPAs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPAs.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain .
All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Carrollton, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #2 – 30 Day Readmissions (7 measures)
Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.
Currently, 7 of the seven measurements are being tracked and reported at Baylor Medical Center at Carrollton. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Carrollton patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain. One note is that PPRs are reported within Baylor Health Care System only. Thus, if a patient presents at a Baylor facility and then is readmitted at another provider's facility, we cannot capture that data.

Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Carrollton will expand the existing data collecting system, and optimize the old system for new reporting processes.
The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Carrollton has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.
The PPR domain in Category 4 has 7 components. Although the impact of the Baylor Medical Center at Carrollton's DSRIP projects on the PPR domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPR domain. The projects and outcomes listed below will help to reduce/prevent PPRs in patients who engage in these programs, are actively managed and have their conditions under control.
The table below summarizes the projects and outcomes that potentially relate to the PPR domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD2- PPR					
Cat 1, 2, & 3	2.1	2.2	2.3	2.4	2.5	2.7
195018001.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X	X	X	X	X	X
IT 1.7 Controlling high blood pressure					X	
195018001.2.1: Expand Chronic Care Management Model-Create Chronic Disease management and Prevention Program	X	X		X	X	
IT 1.10 Diabetes HbA1c poor control		X				
IT 1.11 Diabetes BP control		X				
IT 1.13 Diabetes Foot exam		X				
195018001.2.3: Establish/Expand a Patient Care Navigation Program- Care Connect	X	X	X	X	X	X
195018001.2.2 : Develop Care Management Function that Integrates Primary and Behavioral Health Needs of Individuals- Behavioral Health Counseling, Screening and Treatment			X			
IT 11.1 Diabetes Management for underserved with BH diagnoses		X				
IT 11.3 improve utilization rate of clinical preventive services for BH			X			

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPRs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPRs.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain .

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Carrollton, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, many of the sixty four measurements are being tracked and reported at Baylor Medical Center at Carrollton. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Carrollton patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Carrollton will expand the existing data collecting system, and optimize the old system for new reporting processes.

The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Carrollton has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.

The PPC domain in Category 4 has 1 component with 64 reportable measures. Although the impact of the Baylor Medical Center at Carrollton's DSRIP projects on the PPC domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPC domain. The projects and outcomes listed below will help to reduce/prevent PPCs in patients who engage in these programs, are actively managed and have their conditions under control. We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, and specialty care needs will help to reduce PPCs in the inpatient setting. For example, helping a patient control their diabetes in the outpatient setting may help to reduce PPC # 26: Diabetic Ketoacidosis and Coma or PPC #38 Post-Operative Infection and Deep Wound Disruption with Procedure (if a patient has well controlled diabetes, they may be less susceptible to post-operative infections).The correlation between outpatient management and PPCs is weak and the overall impact of outpatient interventions on PPCs may be minimal.

The table below summarizes the projects and outcomes that potentially relate to the PPC domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD3- PPCs
Cat 1, 2, & 3	

195018001.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X
IT 1.7 Controlling high blood pressure	X
195018001.1.2 :Improve Access to Specialty Care- Expand Specialty care Services	X
IT 12.2 Cervical Cancer Screening	X
IT 12.3 Colorectal Cancer Screening	X
195018001.2.1: Expand Chronic Care Management Model-Create Chronic Disease management and Prevention Program	X
IT 1.10 Diabetes HbA1c poor control	X
IT 1.11 Diabetes BP control	X
IT 1.13 Diabetes Foot exam	X
195018001.2.2 : Develop Care Management Function that Integrates Primary and Behavioral Health Needs of Individuals- Behavioral Health Counseling, Screening and Treatment	X
IT 11.1 Diabetes Management for underserved with BH diagnoses	X
IT 11.3 improve utilization rate of clinical preventive services for BH	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.
We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain
All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Carrollton, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #4 – Patient-Centered Healthcare (2 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 2 of the two measurements are being tracked and reported internally within the Baylor Healthcare System's Office of Patient Centeredness and Quality Reporting and Analytics departments. Although Baylor Medical Center at Carrollton does not have any projects directly related to patient satisfaction in the inpatient realm, one of our care navigation projects will most likely positively impact inpatient patient satisfaction. Baylor Medical Center at Carrollton will expand existing data collecting systems, and optimize the old system for new reporting processes.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

Baylor Medical Center at Carrollton does not have any projects that directly address patient satisfaction measures in the inpatient setting. We do have projects in the ambulatory realm which will measure the impact of patient satisfaction. We do believe that the Care Connect project mentioned in the table below will help improve patient satisfaction scores in the inpatient setting through providing care coordination and continuity of care services.

Category 4	RD4- IP Pat Sat	
Cat 1, 2, & 3	4.1	4.2
195018001.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X	X
IT 9.2 ED appropriate utilization	X	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect to see improvements in patient satisfaction for those patients who have engaged in the Care Connect program. Historically, we have not measured this impact of the program and thus do not have any data on the direct impact on patient satisfaction.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Carrollton, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #5 – Emergency Department (1 measure)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Baylor Medical Center at Carrollton has the data infrastructure and processes to track admit decision time to discharge. Some modification may be required to satisfy the requirement of new reporting domain.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

This domain only has 1 component which measures the time between admit decision to discharge in the ED. The majority of our projects are not physically located in the hospital other than our Care Connect program. We anticipate that if a patient is identified as a candidate for Care Connect in the ED, they can be triaged to community based or non-hospital based resource more quickly, leading to a shorter admit to discharge time duration.

Category 4	RD5- ED
195018001.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X
IT 5.1 Improve cost savings	
IT 9.2 ED appropriate utilization	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that as the Care Connect program develops and expands that the time patients spend in the ED will decrease. Care Connect entails a comprehensive care coordination and case management system which can help to move patients to appropriate care settings more quickly.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Carrollton, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Option Domain #6 – Initial Core Set of Health Care Quality Measures (minimum of 12 measures listed in HHSC guidance. If additional measures are proposed, please describe in the narrative and list them in the table below). Optional, but required if requesting maximum Category Valuation of 15%.

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

b. Rationale/Justification: Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc.

Category 4: Population-Focused Measures *[Baylor Medical Center at Carrollton/195018001]*

Performing Provider Name: Baylor Medical Center at Garland

Texas Provider Identifier: 121790303

Baylor Medical Center at Garland will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Baylor Medical Center at Garland healthcare reporting system indicates further refinement and definition will be required for some of the required metrics. The reporting system has the capability to track and report the required measurements but will require additional work to get the exact required specifications. New system implementation and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)
Domain Description:

d. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 8 of the eight measurements are being tracked and reported at Baylor Medical Center at Garland. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Garland patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Garland will expand the existing data collecting system, and optimize the old system for new reporting processes. The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Garland has chosen will be 10/1 to 3/31.

e. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

The PPA domain in Category 4 has 8 components. Although the impact of the Baylor Medical Center at Garland's DSRIP projects on the PPA domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPA domain. The projects and outcomes listed below will help to reduce/prevent PPAs in patients who engage in these programs, are actively managed and have their conditions under control. The table below summarizes the projects and outcomes that potentially relate to the PPA domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD1- PPA							
Cat 1, 2, & 3	1.1	1.2	1.3	1.4	1.5	1.6	1.7	1.8
121790303.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X	X		X	X	N/A	X	X

IT-1.19 Antidepressant Medication Management	X	X	X	X	X	N/A	X	X

f. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPAs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPAs.

Domain Valuation: Supporting information may be included in the addendums.

c. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

d. **Rationale/Justification:** Please describe your rationale for valuing this domain .

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At , the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #2 – 30 Day Readmissions (7 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 7 of the seven measurements are being tracked and reported at Baylor Medical Center at Garland. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Garland patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain. One note is that PPRs are reported within Baylor Health Care System only. Thus, if a patient presents at a Baylor facility and then is readmitted at another provider's facility, we cannot capture that data.

Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Garland will expand the existing data collecting system, and optimize the old system for new reporting processes.

The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Garland has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

The PPR domain in Category 4 has 7 components. Although the impact of the Baylor Medical Center at Garland's DSRIP projects on the PPR domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPR domain. The projects and outcomes listed below will help to reduce/prevent PPRs in patients who engage in these programs, are actively managed and have their conditions under control. The table below summarizes the projects and outcomes that potentially relate to the PPR domain. Whether marked improvement will occur at a population level is uncertain.

a. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPRs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPRs.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain .

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Garland, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, many of the sixty four measurements are being tracked and reported at Baylor Medical Center at Garland. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Garland patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Garland will expand the existing data collecting system, and optimize the old system for new reporting processes.
The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Garland has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to project/outcomes(s) in Categories 1, 2, and 3.
The PPC domain in Category 4 has 1 component with 64 reportable measures. Although the impact of the Baylor Medical Center at Garland's DSRIP projects on the PPC domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPC domain. The projects and outcomes listed below will help to reduce/prevent PPCs in patients who engage in these programs, are actively managed and have their conditions under control. We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting. For example, helping a patient control their diabetes in the outpatient setting may help to reduce PPC # 26: Diabetic Ketoacidosis and Coma or PPC #38 Post-Operative Infection and Deep Wound Disruption with Procedure (if a patient has well controlled diabetes, they may be less susceptible to post-operative infections).The correlation between outpatient management and PPCs is weak and the overall impact of outpatient interventions on PPCs may be minimal.

The table below summarizes the projects and outcomes that potentially relate to the PPC domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD3- PPCs
Cat 1, 2, & 3	
121790303.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exemptand state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined

that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Garland, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #4 – Patient-Centered Healthcare (2 measures)

Domain Description:

d. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 2 of the two measurements are being tracked and reported internally within the Baylor Healthcare System's Office of Patient Centeredness and Quality Reporting and Analytics departments. Although Baylor Medical Center at Garland does not have any projects directly related to patient satisfaction in the inpatient realm, one of our care navigation projects will most likely positively impact inpatient patient satisfaction. Baylor Medical Center at Garland will expand existing data collecting systems, and optimize the old system for new reporting processes.

e. Describe how Category 4 measures relate to project/outcomes in Categories 1, 2, and 3.

Baylor Medical Center at Garland does not have any projects that directly address patient satisfaction measures in the inpatient setting. We do have projects in the ambulatory realm which will measure the impact of patient satisfaction. Additionally, we do have a project that focuses on medication management (121790303.2.5); however this project occurs in an outpatient setting and would not impact inpatient measures We do believe that the Care Connect project mentioned in the table below will help improve patient satisfaction scores in the inpatient setting through providing care coordination and continuity of care services.

Category 4	RD4- IP Pat Sat	
Cat 1, 2, & 3	4.1	4.2
121790303.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X	X
IT 9.2 ED appropriate utilization	X	X

f. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect to see improvements in patient satisfaction for those patients who have engaged in the Care Connect program. Historically, we have not measured this impact of the program and thus do not have any data on the direct impact on patient satisfaction.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc
All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Garland, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #5 – Emergency Department (1 measure)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.
Baylor Medical Center at Garland has the data infrastructure and processes to track admit decision time to discharge. Some modification may be required to satisfy the requirement of new reporting domain.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.
This domain only has 1 component which measures the time between admit decision to discharge in the ED. The majority of our projects are not physically located in the hospital other than our Care Connect program. We anticipate that if a patient is identified as a candidate for Care Connect in the ED, they can be triaged to community based or non-hospital based resource more quickly, leading to a shorter admit to discharge time duration.

Category 4	RD5- ED

121790303.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X
IT 5.1 Improve cost savings	
IT 9.2 ED appropriate utilization	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that as the Care Connect program develops and expands that the time patients spend in the ED will decrease. Care Connect entails a comprehensive care coordination and case management system which can help to move patients to appropriate care settings more quickly.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Garland, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Option Domain #6 – Initial Core Set of Health Care Quality Measures (minimum of 12 measures listed in HHSC guidance. If additional measures are proposed, please describe in the narrative and list them in the table below). Optional, but required if requesting maximum Category Valuation of 15%.

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.
b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc.

Category 4: Population-Focused Measures *[Baylor Medical Center at Garland/121790303]*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**

Performing Provider Name: Baylor Medical Center at Irving

Texas Provider Identifier: 121776204

Baylor Medical Center at Irving will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Baylor Medical Center at Irving healthcare reporting system indicates further refinement and definition will be required for some of the required metrics. The reporting system has the capability to track and report the required measurements but will require additional work to get the exact required specifications. New system implementation and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 8 of the eight measurements are being tracked and reported at Baylor Medical Center at Irving. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Irving patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Irving will expand the existing data collecting system, and optimize the old system for new reporting processes.
The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Irving has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.
The PPA domain in Category 4 has 8 components. Although the impact of the Baylor Medical Center at Irving's DSRIP projects on the PPA domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPA domain. The projects and outcomes listed below will help to reduce/prevent PPAs in patients who engage in these programs, are actively managed and have their conditions under control.
The table below summarizes the projects and outcomes that potentially relate to the PPA domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD1- PPA							
Cat 1, 2, & 3	1.1	1.2	1.3	1.4	1.5	1.6	1.7	1.8

IT-1.19 Antidepressant Medication Management	X	X	X	X	X	N/A	X	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPAs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPAs.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain.

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At , the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #2 – 30 Day Readmissions (7 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 7 of the seven measurements are being tracked and reported at Baylor Medical Center at Irving. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Irving patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain. One note is that PPRs are reported within Baylor Health Care System only. Thus, if a patient presents at a Baylor facility and then is readmitted at another provider's facility, we cannot capture that data.

Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Irving will expand the existing data collecting system, and optimize the old system for new reporting processes.

The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Irving has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3. The PPR domain in Category 4 has 7 components. Although the impact of the Baylor Medical Center at Irving's DSRIP projects on the PPR domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPR domain. The projects and outcomes listed below will help to reduce/prevent PPRs in patients who engage in these programs, are actively managed and have their conditions under control. The table below summarizes the projects and outcomes that potentially relate to the PPR domain. Whether marked improvement will occur at a population level is uncertain.

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPRs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPRs.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain .

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Irving, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, many of the sixty four measurements are being tracked and reported at Baylor Medical Center at Irving. In addition, many regional DSRIP projects will provide interventions to Baylor Medical Center at Irving patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor Medical Center at Irving will expand the existing data collecting system, and optimize the old system for new reporting processes.

The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor Medical Center at Irving has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3. The PPC domain in Category 4 has 1 component with 64 reportable measures. Although the impact of the Baylor Medical Center at Irving's DSRIP projects on the PPC domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPC domain. The projects and outcomes listed below will help to reduce/prevent PPCs in patients who engage in these programs, are actively managed and have their conditions under control.

The table below summarizes the projects and outcomes that potentially relate to the PPC domain. Whether marked improvement will occur at a population level is uncertain.

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Irving, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #4 – Patient-Centered Healthcare (2 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 2 of the two measurements are being tracked and reported internally within the Baylor Healthcare System's Office of Patient Centeredness and Quality Reporting and Analytics

departments. Although Baylor Medical Center at Irving does not have any projects directly related to patient satisfaction in the inpatient realm, one of our care navigation projects will most likely positively impact inpatient patient satisfaction. Baylor Medical Center at Irving will expand existing data collecting systems, and optimize the old system for new reporting processes.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3. Baylor Medical Center at Irving does not have any projects that directly address patient satisfaction measures in the inpatient setting. We do have projects in the ambulatory realm which will measure the impact of patient satisfaction. Additionally, we do have a project that focuses on medication management (121776204.2.5); however this project occurs in an outpatient setting and would not impact inpatient measures. We believe that the Care Connect project mentioned in the table below will help improve patient satisfaction scores in the inpatient setting through providing care coordination and continuity of care services.

Category 4	RD4- IP Pat Sat	
Cat 1, 2, & 3	4.1	4.2
121776204.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X	X
IT 9.2 ED appropriate utilization	X	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect to see improvements in patient satisfaction for those patients who have engaged in the Care Connect program. Historically, we have not measured this impact of the program and thus do not have any data on the direct impact on patient satisfaction.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor Medical Center at Irving, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #5 – Emergency Department (1 measure)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Baylor Medical Center at Irving has the data infrastructure and processes to track admit decision time to discharge. Some modification may be required to satisfy the requirement of new reporting domain.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

This domain only has 1 component which measures the time between admit decision to discharge in the ED. The majority of our projects are not physically located in the hospital other than our Care Connect program. We anticipate that if a patient is identified as a candidate for Care Connect in the ED, they can be triaged to community based or non-hospital based resource more quickly, leading to a shorter admit to discharge time duration.

Category 4	RD5- ED
121776204.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X
IT 5.1 Improve cost savings	
IT 9.2 ED appropriate utilization	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that as the Care Connect program develops and expands that the time patients spend in the ED will decrease. Care Connect entails a comprehensive care coordination and case management system which can help to move patients to appropriate care settings more quickly.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. Performing Provider Name: Baylor University Medical Center

Texas Provider Identifier: 139485012

Baylor University Medical Center will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Baylor University Medical Center healthcare reporting system indicates further refinement and definition will be required for some of the required metrics. The reporting system has the capability to track and report the required measurements but will require additional work to get the exact required specifications. New system implementation and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 8 of the eight measurements are being tracked and reported at Baylor University Medical Center. In addition, many regional DSRIP projects will provide interventions to Baylor University Medical Center patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain. Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor University Medical Center will expand the existing data collecting system, and optimize the old system for new reporting processes. The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor University Medical Center has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to project(s)/outcomes(s) in Categories 1, 2, and 3.

The PPA domain in Category 4 has 8 components. Although the impact of the Baylor University Medical Center's DSRIP projects on the PPA domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPA domain. The projects and outcomes listed below will help to reduce/prevent PPAs in patients who engage in these programs, are actively managed and have their conditions under control. The table below summarizes the projects and outcomes that potentially relate to the PPA domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD1- PPA							
Cat 1, 2, & 3	1.1	1.2	1.3	1.4	1.5	1.6	1.7	1.8
13945012.1.1: Expand Primary Care Capacity- Baylor Clinic Capacity Expansion	X	X		X	X	N/A	X	X

IT-1.19 Antidepressant Medication Management	X	X	X	X	X	N/A	X	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPAs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPAs.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain .

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At , the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #2 – 30 Day Readmissions (7 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 7 of the seven measurements are being tracked and reported at Baylor University Medical Center. In addition, many regional DSRIP projects will provide interventions to Baylor University Medical Center patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain. One note is that PPRs are reported within Baylor Health Care System only. Thus, if a patient presents at a Baylor facility and then is readmitted at another provider's facility, we cannot capture that data.

Currently, HHSC will make potentially preventable event data to providers. In addition, Baylor University Medical Center will expand the existing data collecting system, and optimize the old system for new reporting processes.

The measurement period for this domain per HHSC will be the calendar year and the reporting period Baylor University Medical Center has chosen will be 10/1 to 3/31.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.
The PPR domain in Category 4 has 7 components. Although the impact of the Baylor University Medical Center's DSRIP projects on the PPR domain will not be known until the latter years of the waiver, the projects we have chosen will help to facilitate improvements in the PPR domain. The projects and outcomes listed below will help to reduce/prevent PPRs in patients who engage in these programs, are actively managed and have their conditions under control. The table below summarizes the projects and outcomes that potentially relate to the PPR domain. Whether marked improvement will occur at a population level is uncertain.

Category 4	RD2- PPR						
Cat 1, 2, & 3	2.1	2.2	2.3	2.4	2.5	2.6	2.7

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting. We expect that once patients are under the care of a PCMH and have their clinical and social needs met, that PPCs should improve. Getting patients into a PCMH, managing their chronic diseases, behavioral health, specialty care and care coordination needs will help to reduce PPCs in the inpatient setting. For example, helping a patient control their diabetes in the outpatient setting may help to reduce PPC # 26: Diabetic Ketoacidosis and Coma or PPC #38 Post-Operative Infection and Deep Wound Disruption with Procedure (if a patient has well controlled diabetes, they may be less susceptible to post-operative infections).The correlation between outpatient management and PPCs is weak and the overall impact of outpatient interventions on PPCs may be minimal.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor University Medical Center, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #4 – Patient-Centered Healthcare (2 measures)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Currently, 2 of the two measurements are being tracked and reported internally within the Baylor Healthcare System's Office of Patient Centeredness and Quality Reporting and Analytics departments. Although Baylor University Medical Center does not have any projects directly related to patient satisfaction in the inpatient realm, one of our care navigation projects will most likely positively impact inpatient patient satisfaction. Baylor University Medical Center will expand existing data collecting systems, and optimize the old system for new reporting processes.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.

Baylor University Medical Center does not have any projects that directly address patient satisfaction measures in the inpatient setting. We do have projects in the ambulatory realm which will measure the impact of patient satisfaction. Additionally, we do have a project that focuses on medication management (139485012.2.5); however this project occurs in an outpatient setting and would not impact inpatient measures. We believe that the Care Connect project mentioned in the table below will help improve patient satisfaction scores in the inpatient setting through providing care coordination and continuity of care services.

Category 4	RD4- IP Pat Sat	
Cat 1, 2, & 3	4.1	4.2
13945012.2.3: Establish/Expand a Patient Care Navigation Program- Care Connect	X	X

IT 9.2 ED appropriate utilization	X	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect to see improvements in patient satisfaction for those patients who have engaged in the Care Connect program. Historically, we have not measured this impact of the program and thus do not have any data on the direct impact on patient satisfaction.

Domain Valuation: Supporting information may be included in the addendums.

a. Approach/Methodology: Please describe your approach for valuing this domain.
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. Rationale/Justification: Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor University Medical Center, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Domain #5 – Emergency Department (1 measure)

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

Baylor University Medical Center has the data infrastructure and processes to track admit decision time to discharge. Some modification may be required to satisfy the requirement of new reporting domain.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.

This domain only has 1 component which measures the time between admit decision to discharge in the ED. The majority of our projects are not physically located in the hospital other than our Care Connect program. We anticipate that if a patient is identified as a candidate for Care Connect in the ED, they can be triaged to community based or non-hospital based resource more quickly, leading to a shorter admit to discharge time duration. ‘

Category 4	RD5- ED
13945012.2.3: Establish/Expand a Patient Care Navigation Program-Care Connect	X
IT 5.1 Improve cost savings	
IT 9.2 ED appropriate utilization	X

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

We expect that as the Care Connect program develops and expands that the time patients spend in the ED will decrease. Care Connect entails a comprehensive care coordination and case management system which can help to move patients to appropriate care settings more quickly.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. At Baylor University Medical Center, the rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Option Domain #6 – Initial Core Set of Health Care Quality Measures (minimum of 12 measures listed in HHSC guidance. If additional measures are proposed, please describe in the narrative and list them in the table below). Optional, but required if requesting maximum Category Valuation of 15%.

Domain Description:

a. Describe the system capability changes needed for reporting and specify measuring and reporting periods.

b. Describe how Category 4 measures relate to projects/outcomes(s) in Categories 1, 2, and 3.

c. Describe the expected improvements for DYs 2-5. Indicate if a domain measure is exempt and state the reason.

Domain Valuation: Supporting information may be included in the addendums.

a. **Approach/Methodology:** Please describe your approach for valuing this domain.

b. **Rationale/Justification:** Please describe your rationale for valuing this domain including, but not limited to, various factors such as size, project scope, population served, community benefit, cost avoidance, addressing priority community need, estimated local funding, etc.

Category 4: Population-Focused Measures *[Baylor University Medical Center/139485012]*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.

Reporting Domain 1: Potentially Preventable Admissions:

Performing Provider Name/TPI: Children's Medical Center of Dallas/138910807
Unique RHP identification number: 138910807.4.1

Domain Descriptions:

Children's has been reporting and tracking the RD1 measures through Child Health Corporation of America (CHCA) for comparison with other stand-alone pediatric hospitals.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of current the current reporting system will occur during DY2 and DY3 to optimize system compatibility and to meet new reporting requirements. New processes will be implemented to ensure complete and accurate data collection. Category 1 and 2 projects and Category 3 outcomes baseline values will use available data to establish baseline and milestone metrics.

Children's successful implementation of Category 1 interventions will lead to health care improvements during and after the waiver period including reducing potentially preventable admissions. Opening new MyChildren's locations (138910807.1.1) and expanding MyChildren's hours at in RHP 9 (138910807.1.2) will improve access to care by making more primary care office hours available and also outside of the regular office hours. Potentially Preventable Admissions can be avoided with regular primary care. Children with complex chronic medical conditions often are hospitalized due to poor coordination of care and the complications of one treatment impacting another organ system. Providing a medical home for these patients will support effective coordination of care and avoid potentially preventable admissions. Studies have shown that use of a pediatric nurse triage phone system (138910807.1.2) can reduce unnecessary trips to the emergency room by two thirds of those families using the phone system while increasing the use of the emergency department or urgent care in 15% of families using the triage nurse line and who would have otherwise stayed at home. Appropriate escalation of care to the most effective setting will decrease Potentially Preventable Admissions. By implementing disease management programs in the MyChildren's practices (138910807.1.3), chronic diseases such as asthma can be managed locally with exacerbations of symptoms reduced and thus Potentially Avoidable Admissions prevented. Access to behavioral health services in the MyChildren's locations (138910807.1.4) will also decrease Potentially Preventable Admissions, particularly when coupled with disease management for chronic illness. Children with chronic illness are at much higher risk of increased incidence of mental illness which can result increased inpatient admissions.

The Category 2 project to transform the MyChildren's primary care offices into patient-centered medical homes certified by the NCQA (138910807.2.1) will provide timely, effective, culturally sensitive primary care services which will reduce Potentially Preventable Admissions by proactively identifying and treating health issues which could result in hospital admissions.

Patients with complex medical needs requiring coordination of services and patients who habitually use the emergency services for low complexity care will be provided patient navigation services (138910807.2.2) which will assist patients in seeking care at an appropriate setting at an appropriate time thus preventing escalation of illness which would result in a potentially preventable admission. Addressing the overall health of the community and specifically targeting pediatric asthma (138910807.2.3) will increase awareness of appropriate management and ultimate prevention of these health conditions. Providing a standardized approach to transitioning older pediatric patients to adult providers (138910807.2.4) will assure continuation of care to avoid potentially preventable admissions during transition of care.

Improvements in Category 3 outcomes will influence the Category 4 reporting measures by proactively and effectively treating health concerns to avoid escalation of care needs including emergency room use and hospital admissions.

All Category 1 and 2 projects and Category 3 outcome measures will support reductions in Category 4 reporting measures including Potentially Preventable Admissions.

Children's will report on all pediatric-appropriate measures in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Domain Valuation:
As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document and influence pediatric healthcare outcomes.

Reporting Domain 2: Potentially Preventable Readmissions:

Performing Provider Name/TPI: Children's Medical Center of Dallas/138910807
Unique RHP identification number: 138910807.4.2

Domain Descriptions:

Children's has been reporting and tracking the RD2 measures through Child Health Corporation of America (CHCA) for comparison with other stand-alone pediatric hospitals.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of current the current reporting system will occur during DY2 and DY3 to optimize system compatibility and to meet new reporting requirements. New processes will be implemented to ensure complete and accurate data collection. Category 1 and 2 projects and Category 3 outcomes baseline values will use available data to establish baseline and milestone metrics.

Children's successful implementation of Category 1 interventions will lead to health care improvements for pediatric patients during and after the waiver period including long-term health improvements into adulthood and reduce potentially preventable readmissions. It is important that children receive appropriate outpatient follow-up care a hospitalization. Anecdotally, discharges at Children's are often delayed due to the need to secure an outpatient follow-up appointment post-discharge, particularly for those patients on Medicaid, CHIP or uninsured. New MyChildren's offices (138910807.1.1) will be placed in locations where there are limited number or no pediatricians who accept Medicaid or CHIP. The placement of a MyChildren's office on the Dallas Children's Medical Center campus will provide access to primary care on the same campus where the child was initially hospitalized. Children with chronic complex medical needs will also have access to a primary care office on the Dallas campus. Expanding MyChildren's hours (138910807.1.2) will make more appointments available at times convenient to parents thus increasing the ability to make a follow-up appointment post-discharge and lessen the potential for a preventable readmission. Studies have shown that use of a pediatric nurse triage phone system (138910807.1.2) can increase the use of the emergency department or urgent care in 15% of families using the triage line who would have otherwise stayed at home, unaware of the urgency of their child's medical condition. Appropriate escalation of care to the most effective setting post inpatient discharge will decrease the Potentially Preventable Readmissions. Many children are hospitalized for chronic disease conditions. Children can be enrolled in the disease management program through the MyChildren's practices in RHP 9 (138910807.1.3) during their inpatient stay. Post discharge, the chronic condition such as asthma can be managed locally with exacerbations of symptoms reduced and thus Potentially Avoidable Readmissions prevented. Access to behavioral health services in the MyChildren's (138910807.1.4) will also decrease Potentially Preventable Readmissions, particularly when coupled with disease management for chronic illness. Children with chronic illness are at much higher risk of increased incidence of mental illness which can result increased inpatient admissions.

The Category 2 project to transform the MyChildren's primary care offices into patient-centered medical homes certified by the NCQA (138910807.2.1) will provide timely, effective, culturally sensitive primary care services. Since the medical home is designed to manage a child's medical condition holistically, missed follow-up appointments post discharge will be flagged for further contact with the family. Also, the medical home practice will be proactively following patients who have had a recent inpatient stay, thereby reducing Potentially Preventable Readmissions. Patients with complex medical needs requiring coordination of services and patients who habitually use the emergency services for low complexity care will be provided patient navigation services (138910807.2.2) which will assist patients in seeking care at an appropriate setting at an appropriate time thus preventing escalation of illness which would result in a potentially preventable readmission.

Improvements in Category 3 outcomes will influence the Category 4 reporting measures by proactively and effectively treating health concerns to avoid escalation of care needs including emergency room use and hospital admissions and readmissions.

All Category 1 and 2 projects and Category 3 outcome measures will support reductions in Category 4 reporting measures including Potentially Preventable Readmissions.

Children's will report on all pediatric-appropriate measures in RD2 in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Domain Valuation:
As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document, influence and improve pediatric healthcare outcomes.

Reporting Domain 3: Potentially Preventable Complications:

Performing Provider Name/TPI: Children's Medical Center of Dallas/13890807
Unique RHP identification number: 13890807.4.3

Domain Descriptions:

Children's has been reporting and tracking the RD3 measures through Child Health Corporation of America (CHCA) for comparison with other stand-alone pediatric hospitals.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of current the current reporting system will occur during DY2 and DY3 to optimize system compatibility and to meet new reporting requirements. New processes will be implemented to ensure complete and accurate data collection. Category 1 and 2 projects and Category 3 outcomes baseline values will use available data to establish baseline and milestone metrics.

There are no specific Category 1 or 2 projects being proposed by Children's which directly will influence Potentially Preventable Complications. However, Children's successful implementation of Category 1 and Category 2 interventions will lead to health care improvements for pediatric patients during and after the waiver period including long-term health improvements into adulthood. One of the outcomes of the Category 1 and Category 2 interventions will be a more health-literate patient and family. Teaching families to be the advocates for their children's health will be of part of a patient-centered medical home (138910807.2.1), disease management (138910807.1.3) and behavioral health services (138910807.1.4). Families who are an active member of their child's health care team when that child is hospitalized can greatly influence and reduce Potentially Preventable Complications by questioning care providers and escalating concerns to receive appropriate intervention. By expanding MyChildren's hours and adding another location in RHP 18 (138910807.1.1 and 138910807.1.2) and making more appointments available at times convenient to parents, the

likelihood of a potentially avoidable admission is decreased thereby eliminating potentially preventable complications during an inpatient stay. Studies have shown that use of a pediatric nurse triage phone system (138910807.1.3) can increase the use of the emergency department or urgent care in 15% of families who would have otherwise stayed at home, unaware of the urgency of their child's medical condition. Appropriate escalation of care to the most effective setting will decrease the potentially preventable admissions thereby eliminating the potential for complications during an inpatient stay.

Improvements in Category 3 outcomes will influence the Category 4 reporting measures by proactively and effectively treating health concerns to avoid escalation of care needs including emergency room use and hospital admissions and readmissions.

All Category 1 and 2 projects and Category 3 outcome measures will support reductions in Category 4 reporting measures by improving health and patient/family health advocacy thereby reducing potentially preventable complications during an inpatient stay.

Children's will report on all pediatric-appropriate measures in RD3 in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Domain Valuation:
As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document, influence and improve pediatric healthcare outcomes.

Reporting Domain 4: Patient-Centered Healthcare

Performing Provider Name/TPI: Children's Medical Center of Dallas/138910807
Unique RHP identification number: 138910807.4.4

Domain Descriptions:

Children's has been reporting and tracking these statistics through Child Health Corporation of America (CHCA) for comparison with other stand-alone pediatric hospitals.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of current the current reporting system will happen during DY2 and DY3 to optimize system compatibility and to meet new reporting requirements. New processes will be implemented to ensure complete and accurate data collection. Category 1 and 2 projects and Category 3 outcomes baseline values will use available data to establish baseline and milestone metrics.

There are no specific Category 1 or 2 projects being proposed by Children's which directly influence patient satisfaction with an inpatient stay or medication reconciliation at the time of discharge. However, Children's successful implementation of Category 1 and Category 2 interventions will lead to improvements for pediatric patients during and after the waiver period including long-term health improvements into adulthood. One of the outcomes of the Category 1 and Category 2 interventions will be a more health-literate patient and family. Teaching families to be the advocates for their children's health will be of part of a patient-centered medical home (138910807.2.1), disease management (138910807.1.3) and behavioral health services (138910807.1.4). Families who are an active member of their child's health care team when that child is hospitalized are more satisfied with the care their child received while hospitalized and will be proactive in requesting medication reconciliation at discharge.

Improvements in Category 3 outcomes will influence the Category 4 reporting measures by proactively and effectively treating health concerns to avoid escalation of care needs including emergency room use and hospital admissions and readmissions.

All Category 1 and 2 projects and Category 3 outcome measures will support reductions in Category 4 reporting measures by improving health and patient/family health advocacy thereby patient and family satisfaction and medication management during an inpatient stay.

Children's will report on all pediatric-appropriate measures in RD4 in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Domain Valuation:
As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document, influence and improve pediatric healthcare outcomes.

Reporting Domain 5: Emergency Department:

Performing Provider Name/TPI: Children's Medical Center of Dallas/138910807
Unique RHP identification number: 138910807.4.5

Domain Descriptions:

There are no DSRIP projects associated with this reporting domain and therefore no measureable impact is expected for this domain related to the interventions.

Children's will report on the required measures annually starting in DY3.

Domain Valuation:

As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document and influence pediatric healthcare outcomes.

Reporting Domain 6: Children and Adult Core Measures

Performing Provider Name/TPI: Children's Medical Center of Dallas/138910807
Unique RHP identification number: 138910807.4.6

Domain Descriptions:
Children's will participate in the optional Reporting Domain with separated measurement sets for children and adults. Since Children's is a pediatric facility, limited information will be available for the adult data set.
Children's does not provide prenatal or birthing services, therefore Measure 1 through 4 of the Initial Core Set of Children's Health Care Quality Measures will not be influenced by Children's DSRIP projects. Category 1 interventions 138910807.1.1, 138910807.1.2 and Category 2 intervention 138910807.2.1 are based in the primary care environment and will positively influence Measures 5 through 18. Category 1 intervention 138910807.1.3 provides expansion of disease management services and will positively influence Measures 20 and 22. Category 1 intervention 138910807.1.4 will increase behavioral health services and will positively impact Measures 21 and 23. The DSRIP projects are all designed to improve patient and family satisfaction and therefore should positively influence Measure 24. The DSRIP projects will not directly address Measure 19.

Children's will report on the required measures annually starting in DY3.

Domain Valuation:
As per HHSC and CMS guidelines, Children's has valued Category 4 at the maximum allowed values of 10% for DY2 and 15% for DY3, DY4 and DY5. This maximum valuation reflects Children's commitment to providing data to document and influence pediatric healthcare outcomes.

Category 4: Population-Focused Measures *Children's Medical Center 138910807*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.		
Estimated Maximum Incentive Amount	$1,527,294	$885,166		
Domain 1: Potentially Preventable Admissions (PPAs)

Grand Total Payments Across Category 4	$1,527,294	$5,311,000	$5,681,536	$6,175,582

The IGT entities for each year are:

Dallas County Hospital District dba Parkland Hlth & Hosp Sys	127295703
Ector County Hospital District	135235306

Performing Provider Name: Denton Regional Medical Center

Texas Provider Identifier: 111905902

Denton Regional Medical Center will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Denton Regional Medical Center healthcare reporting system indicates capability to track and report on some of the required measurements. Some measures are able to be tracked and reported but are not consistently produced or reported. Implementation of new data gathering requirements and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)

Denton Regional Medical Center currently tracks and reports 2 of the 8 measurements for public reporting. Measurements that have not yet been addressed are:

- Congestive heart Failure Admission Rate
- Diabetes Admission Rates
- Behavioral Health and Substance Abuse Admission Rate
- Chronic Obstructive Pulmonary Disease or Asthma in Adults
- Admission Rate
- Hypertension Admission rate
- Pediatric Asthma

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Denton Regional Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

The proposed project to Redesign Patient Experience 111905902.2.2 is intended to implement process improvements to change the patient satisfaction and experience utilizing the hospital. This will impact inpatient and outpatient services. Key areas of experience can influence the risk of admission, including communication, care from nurses and doctors and medication management and discharge process. For example, patients in Emergency rooms need good instructions on their disease and medications and/or follow up care that is necessary. The potential exists for patients to not follow the care prescribed because they don't understand the impact of these instructions as it was not communicated effectively. Better communication can assist in preventing an health care issue from becoming acute and requiring hospitalization, In particular, how well the staff communicates with patients about medications, and whether key information is provided at discharge can directly impact the risk of admission for patients.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #2 – 30 Day Readmissions (7 measures)

Denton Regional Medical Center currently tracks and reports 2 of the 7 measurements for public reporting. Measurements that have not yet been addressed are:

- Diabetes: 30-Day Readmissions
- Behavioral Health & Substance Abuse: 30-Day Readmissions
- Chronic Obstructive Pulmonary Disease (COPD): 30-Day
- Readmissions
- Stroke: 30- Day Readmissions
- Pediatric Asthma: 30-Day Readmissions

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Denton Regional Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Denton Regional Medical Center patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience is intended to implement process improvements to change the patient satisfaction and experience of hospitalization. Key areas of experience can influence the risk of readmission, including communication, care from nurses and doctors and medication management and discharge process. In particular, how well the staff communicates with patients about medications, and whether key information is provided at discharge can directly impact the risk of readmission for patients.

In addition, the proposed project 111905902.2.1 for Sepsis improvement involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the

hospital and what they must take after discharge, effective medication management is vital for continued care of sepsis and reduced risk for readmissions.

We also expect to see a reduction in readmissions for patients with an initial index admission of Sepsis and those readmitted for Sepsis with initial diagnosis other than Sepsis. Readmissions due to medication management will also be reduced.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Currently, 15 of the sixty four measurements are being tracked and reported in a form of public healthcare statistics. All other measures are tracked and reported internally

Currently, HHSC will make potentially preventable event data to providers. In addition, Denton Regional Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Denton Regional Medical Center patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain.
The proposed project to implement an innovative program for Sepsis improvement aims to identify /diagnosis Sepsis sooner and begin evidence based treatment to reduce mortality and complications for septic shock and severe sepsis.

Improved sepsis care reduces complications particularly those common in septic patients such as pulmonary embolism, acute myocardial infarction, venous thrombosis, major liver complications, renal failure with and without Dialysis and encephalopathy. Also, the project will focus on reducing the average length of stay for sepsis patients. Reducing the length of stay of patients diagnosed with sepsis will also impact a reduction in complications. Evidence shows with increased length of stay there is increased risk of preventable complications.

The proposed project to Redesign the Patient Experience will focus on patients satisfaction and experience. Improved patient communication and satisfaction with caregivers has been shown to improve quality and safety of care. Poor communications including nurse and doctor responses to patients has been correlated to increased beds sores, bloodstream infections, catheter-related Infections and leg or lung blood clots. A reduction in preventable complications is expected with a redesigned patient experience.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #4 – Patient-Centered Healthcare (2 measures)

Currently, 2 of the two measurements are being tracked and reported.

Patient Satisfaction is surveyed by Gallup for HCAHPS requirements. It is reported internally each week for preliminary results. As required, final results are report to CMS and posted publically. Publicly reported HCAHPS results are based on four consecutive quarters of patient surveys. CMS publishes participating hospitals' HCAHPS results on the Hospital Compare website (www.hospitalcompare.hhs.gov) four times a year, with the oldest quarter of patient surveys rolling off as the most recent quarter rolls on. Additional HCAHPS results can be found on HCAHPS On-Line, (www.hcahpsonline.org).

Medication management is only reported publically as a required element of certain CORE MEASURES reporting. However, it is tracked and reported internally for all inpatients by the quality department as a patient safety and quality of care measurement.

Denton Regional Medical Center will expand existing data collecting system and optimize old system for new reporting processes as necessary.

In addition, Denton Regional Medical Center has proposed several quality-based projects that will provide improvement of care to all Denton Regional Medical Center patients in multiple

areas, resulting in improvement patient satisfaction throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience is aimed at improving the patient satisfaction of the care received (RD-4 1. Patient Satisfaction).The goal to improve patient satisfaction and experience is also important for improved quality and safety of care provided. Studies have linked patient satisfaction with communication with doctor nurses, responsive to patients' needs and cleanliness to patient perceptions of hospital practices and facility infection rates.

Another focus for Redesign Patient Experience is medication management (RD-4 2 Medication Management). How well the staff communicates with patients about medicines, and whether key information is provided at discharge is critical to successful medication management and patient safety.

The proposed project for process improvement for Sepsis care involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. Improving processes in this program includes effective communication. The communication between the emergency room, doctors, nurses/ care givers and families for these critically ill patients is vital to the plan of care. Teaching patients and families the cause and symptoms of sepsis is also important for care management. Patient satisfaction is improved with effective communication.

It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the hospital and what they must take after discharge, effective medication management if vital for continued care of sepsis.

We expected to improve Patient satisfaction HCAHPS Grand Composite scores to be > 75th percentile by the end of the waiver. Although we are over 95% compliant with Medication Management documentation, we have only earned a 58% on the composite scores on Communication on medications in HCAHPS. We expect effective communication improvement will increase HCAHPS medication scores by 50% by the end of the waiver.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #5 – Emergency Department (1 measure)

Denton Regional Medical Center currently tracks and reports Admit decision time to ED departure for admitted patients for JCAHO and internal quality requirements. The current tracking system is already in place and will be modified or improved as necessary to satisfy the requirement of new reporting domain.

In addition, the proposed project for Sepsis improvement involves the timely identification and evidence based treatment of patients. A key component of a Sepsis protocol is the timely identification/diagnosis of septic shock/severe sepsis to admit and begin evidence based treatment. Process improvements implemented for sepsis protocols in the ED support the goal of less than 1 hour for ED admit/ departure (decision time) for critical patients.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Category 4: Population-Focused Measures *Denton Regional Medical Center/111905902*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**

Category 4

Performing Provider Name: Las Colinas Medical Center

Texas Provider Identifier: 020979301

Las Colinas Medical Center will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Las Colinas Medical Center healthcare reporting system indicates capability to track and report on some of the required measurements. Some measures are able to be tracked and reported but are not consistently produced or reported. Implementation of new data gathering requirements and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)
Las Colinas Medical Center currently tracks and reports 2 of the 8 measurements for public reporting. Measurements that have not yet been addressed are:

- Congestive heart Failure Admission Rate
- Diabetes Admission Rates
- Behavioral Health and Substance Abuse Admission Rate
- Chronic Obstructive Pulmonary Disease or Asthma in Adults Admission Rate
- Hypertension Admission rate
- Pediatric Asthma

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Las Colinas Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

The proposed project to Redesign Patient Experience 020979301.2.1 is intended to implement process improvements to change the patient satisfaction and experience of patients utilizing the hospital. This will impact inpatient and outpatient services. Key areas of experience can influence the risk of admission, including communication, care from nurses and doctors and medication management and discharge process. For example, patients in Emergency rooms need good instructions on their disease and medications and/or follow up care that is necessary. The potential exists for patients to not follow the care prescribed because they don't understand the impact of these instructions as it was not communicated effectively. Better communication can assist in preventing an health care issue from becoming acute and requiring hospitalization, In particular, how well the staff communicates with patients about medications,

and whether key information is provided at discharge can directly impact the risk of admission for patients.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #2 – 30 Day Readmissions (7 measures)

Las Colinas Medical Center currently tracks and reports 2 of the 7 measurements for public reporting. Measurements that have not yet been addressed are:

- Diabetes: 30-Day Readmissions
- Behavioral Health & Substance Abuse: 30-Day Readmissions
- Chronic Obstructive Pulmonary Disease (COPD): 30-Day Readmissions
- Stroke: 30- Day Readmissions
- Pediatric Asthma: 30-Day Readmissions

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Las Colinas Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Las Colinas Medical Center patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience is intended to implement process improvements to change the patient satisfaction and experience of hospitalization. Key areas of experience can influence the risk of readmission, including communication, care from nurses and doctors and medication management and discharge process. In particular, how well the staff communicates with patients about medications, and whether key information is provided at discharge can directly impact the risk of readmission for patients.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Currently, 15 of the sixty four measurements are being tracked and reported in a form of public healthcare statistics. All other measures are tracked and reported internally

Currently, HHSC will make potentially preventable event data to providers. In addition, Las Colinas Medical Center will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Las Colinas Medical Center patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain.

The proposed project to Redesign the Patient Experience will focus on patients satisfaction and experience. Improved patient communication and satisfaction with caregivers has been shown to improve quality and safety of care. Poor communications including nurse and doctor responses to patients has been correlated to increased beds sores, bloodstream infections, catheter-related Infections and leg or lung blood clots. A reduction in preventable complications is expected with a redesigned patient experience.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #4 – Patient-Centered Healthcare (2 measures)

Currently, 2 of the two measurements are being tracked and reported.

Patient Satisfaction is surveyed by Gallup for HCAHPS requirements. It is reported internally each week for preliminary results. As required, final results are report to CMS and posted publically. Publicly reported HCAHPS results are based on four consecutive quarters of patient surveys. CMS publishes participating hospitals' HCAHPS results on the Hospital Compare website (www.hospitalcompare.hhs.gov) four times a year, with the oldest quarter of patient surveys rolling off as the most recent quarter rolls on. Additional HCAHPS results can be found on HCAHPS On-Line, (www.hcahpsonline.org).

Medication management is only reported publically as a required element of certain CORE MEASURES reporting. However, it is tracked and reported internally for all inpatients by the quality department as a patient safety and quality of care measurement.

Las Colinas Medical Center will expand existing data collecting system and optimize old system for new reporting processes as necessary.

In addition, Las Colinas Medical Center has proposed a quality-based project that will provide improvement of care to all Las Colinas Medical Center patients in multiple areas, resulting in improvement patient satisfaction throughout all measurements in the Reporting Domain. The proposed project to Redesign Patient Experience is aimed at improving the patient satisfaction of the care received (RD-4 1. Patient Satisfaction).The goal to improve patient satisfaction and experience is also important for improved quality and safety of care provided. Studies have linked patient satisfaction with communication with doctor nurses, responsive to patients' needs and cleanliness to patient perceptions of hospital practices and facility infection rates.

Another focus for Redesign Patient Experience is medication management (RD-4 2 Medication Management). How well the staff communicates with patients about medicines, and whether key information is provided at discharge is critical to successful medication management and patient safety.

We expected to improve Patient satisfaction HCAHPS Grand Composite scores to be > 75th percentile by the end of the waiver. Although we are over 95% compliant with Medication Management documentation, we have only earned a 60% on the composite scores on Communication on medications in HCAHPS. We expect effective communication improvement will increase HCAHPS medication scores by 50% by the end of the waiver.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #5 – Emergency Department (1 measure)

Las Colinas Medical Center currently tracks and reports Admit decision time to ED departure for admitted patients for JCAHO and internal quality requirements. The current tracking system is already in place and will be modified or improved as necessary to satisfy the requirement of new reporting domain.

In addition, Las Colinas Medical Center has proposed a quality-based project that will provide improvement of care to all Las Colinas Medical Center patients in multiple areas, supporting the ED throughput, quality and safety

The proposed project to Redesign Patient Experience will focus improvement efforts on critical patients experience targets. Satisfaction and experience with Emergency Room services is essential for effective ED throughput and operations. Effective communication about wait times and letting patients know what to expect on their ED visits can decrease left without being seen patients to improve patient safety. Eliminating waiting areas or starting care with standing orders for nursing before physicians see patients will allow ED physicians to spend time with critical patients to facilitate care and admit decisions in < 1 hour more manageable. Improved communication among doctors, nurses and hospital staff is essential to managing through put to facilitate patients to appropriate admitted beds.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Performing Provider Name: Medical Center of Lewisville

Texas Provider Identifier: 094192402

Medical Center of Lewisville will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Medical Center of Lewisville healthcare reporting system indicates capability to track and report on some of the required measurements. Some measures are able to be tracked and reported but are not consistently produced or reported. Implementation of new data gathering requirements and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3.

Domain #1 – Potentially Preventable Admissions (8 measures)

Medical Center of Lewisville currently tracks and reports 2 of the 8 measurements for public reporting. Measurements that have not yet been addressed are:

- Congestive heart Failure Admission Rate
- Diabetes Admission Rates
- Behavioral Health and Substance Abuse Admission Rate
- Chronic Obstructive Pulmonary Disease or Asthma in Adults Admission Rate
- Hypertension Admission rate
- Pediatric Asthma

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Medical Center of Lewisville will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Medical Center of Lewisville patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience 094192402.2.1 is intended to implement process improvements to change the patient satisfaction and experience utilizing the hospital. This will impact inpatient and outpatient services. Key areas of experience can influence the risk of admission, including communication, care from nurses and doctors and medication management and discharge process. For example, patients in Emergency rooms need good instructions on their disease and medications and/or follow up care that is necessary. The potential exists for patients to not follow the care prescribed because they don't understand the impact of these instructions as it was not communicated effectively. Better communication

can assist in preventing an health care issue from becoming acute and requiring hospitalization, In particular, how well the staff communicates with patients about medications, and whether key information is provided at discharge can directly impact the risk of admission for patients.

The proposed project to Establish a Patient Navigation (094192402.2.3) program for ED patients will work to find primary care and medical homes for patients who frequently use the ED. Patients with chronic diseases need care to medically management their diseases. Without this care, they are more likely to be hospitalized for exacerbation of their disease or for other acute care that is complicated by their chronic disease. By improving access to primary care services, we believe we will see a decrease in admissions for chronic diseases such as Diabetes, COPD and CHF.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #2 – 30 Day Readmissions (7 measures)

Medical Center of Lewisville currently tracks and reports 2 of the 7 measurements for public reporting. Measurements that have not yet been addressed are:

- Diabetes: 30-Day Readmissions
- Behavioral Health & Substance Abuse: 30-Day Readmissions
- Chronic Obstructive Pulmonary Disease (COPD): 30-Day Readmissions
- Stroke: 30- Day Readmissions
- Pediatric Asthma: 30-Day Readmissions

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Medical Center of Lewisville will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Medical Center of Lewisville patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience (094192402.2.1)is intended to implement process improvements to change the patient satisfaction and experience of hospitalization. Key areas of experience can influence the risk of readmission, including communication, care from nurses and doctors and medication management and discharge process. In particular, how well the staff communicates with patients about medications, and whether key information is provided at discharge can directly impact the risk of readmission for patients.

In addition, the proposed project for Sepsis improvement (094192402.2.2) involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the hospital and what they must take after discharge, effective medication management is vital for continued care of sepsis and reduced risk for readmissions.

We also expect to see a reduction in readmissions for patients with an initial index admission of Sepsis and those readmitted for Sepsis with initial diagnosis other than Sepsis. Readmissions due to medication management will also be reduced.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Currently, 15 of the sixty four measurements are being tracked and reported in a form of public healthcare statistics. All other measures are tracked and reported internally

Currently, HHSC will make potentially preventable event data to providers. In addition, Medical Center of Lewisville will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Medical Center of Lewisville patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain.

The proposed project to implement an innovative program for Sepsis improvement (094192402.2.2) aims to identify /diagnosis Sepsis sooner and begin evidence based treatment to reduce mortality and complications for septic shock and severe sepsis.
Improved sepsis care reduces complications particularly those common in septic patients such as pulmonary embolism, acute myocardial infarction, venous thrombosis, major liver complications, renal failure with and without Dialysis and encephalopathy. Also, the project will focus on reducing the average length of stay for sepsis patients. Reducing the length of stay of patients diagnosed with sepsis will also impact a reduction in complications. Evidence shows with increased length of stay there is increased risk of preventable complications.

The proposed project to Redesign the Patient Experience (094192402.2.1) will focus on patients satisfaction and experience. Improved patient communication and satisfaction with caregivers has been shown to improve quality and safety of care. Poor communications including nurse and doctor responses to patients has been correlated to increased beds sores, bloodstream infections, catheter-related Infections and leg or lung blood clots. A reduction in preventable complications is expected with a redesigned patient experience.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #4 – Patient-Centered Healthcare (2 measures)

Currently, 2 of the two measurements are being tracked and reported.

Patient Satisfaction is surveyed by Gallup for HCAHPS requirements. It is reported internally each week for preliminary results. As required, final results are report to CMS and posted publically. Publicly reported HCAHPS results are based on four consecutive quarters of patient surveys. CMS publishes participating hospitals' HCAHPS results on the Hospital Compare website (www.hospitalcompare.hhs.gov) four times a year, with the oldest quarter of patient surveys rolling off as the most recent quarter rolls on. Additional HCAHPS results can be found on HCAHPS On-Line, (www.hcahpsonline.org).

Medication management is only reported publically as a required element of certain CORE MEASURES reporting. However, it is tracked and reported internally for all inpatients by the quality department as a patient safety and quality of care measurement.

Medical Center of Lewisville will expand existing data collecting system and optimize old system for new reporting processes as necessary.

In addition, Medical Center of Lewisville has proposed several quality-based projects that will provide improvement of care to all Medical Center of Lewisville patients in multiple areas, resulting in improvement patient satisfaction throughout all measurements in the Reporting Domain.

The proposed project to Redesign Patient Experience (094192402.2.1) is aimed at improving the patient satisfaction of the care received (RD-4 1. Patient Satisfaction).The goal to improve patient satisfaction and experience is also important for improved quality and safety of care provided. Studies have linked patient satisfaction with communication with doctor nurses, responsive to patients' needs and cleanliness to patient perceptions of hospital practices and facility infection rates.

Another focus for Redesign Patient Experience is medication management (RD-4 2. Medication management). How well the staff communicates with patients about medicines, and whether key information is provided at discharge is critical to successful medication management and patient safety.

The proposed project for process improvement for Sepsis (094192402.2.2)care involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. Improving processes in this program includes effective communication. The communication between the emergency room, doctors, nurses/ care givers and families for these critically ill patients is vital to the plan of care. Teaching patients and families the cause and symptoms of sepsis is also important for care management . Patient satisfaction is improved with effective communication.

It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the hospital and what they must take after discharge, effective medication management if vital for continued care of sepsis.

We expected to improve Patient satisfaction HCAHPS Grand Composite scores to be > 75th percentile by the end of the waiver. Although we are over 95% compliant with Medication Management documentation, we have only earned a 59% on the composite scores on Communication on medications in HCAHPS. We expect effective communication improvement will increase HCAHPS medication scores by 50% by the end of the waiver.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #5 – Emergency Department (1 measure)

Medical Center of Lewisville currently tracks and reports Admit decision time to ED departure for admitted patients for JCAHO and internal quality requirements. The current tracking system is already in place and will be modified or improved as necessary to satisfy the requirement of new reporting domain.

In addition, several DSRIP projects will provide interventions to patients in multiple areas, resulting in improvement in the Reporting Domain.
The proposed project for Sepsis improvement project (094192402.2.2) involves the timely identification and evidence based treatment of patients. A key component of a Sepsis protocol is the timely identification/diagnosis of septic shock/severe sepsis to admit and begin evidence based treatment.

The proposed project to Establish a Patient Navigation program (094192402.2.3) for ED patients will work to find primary care and medical homes for patients who frequently use the ED. Patients with chronic diseases need care to medically management their diseases instead of using ED too often for episodic care. With a reduction in inappropriate ED visits, hospitals will create capacity to better service those in need of true emergency services and allow for improved emergency care.

Process improvements implemented for sepsis protocols in the ED and decreasing inappropriate visits support the goal of less than 1 hour for ED admit/ departure (decision time) for critical patients.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Category 4: Population-Focused Measures *Medical Center of Lewisville/094192402*

Domain 6 - Estimated Maximum Incentive Amount		$	$	$
Grand Total Payments Across Category 4	$51,563	$119,535	$127,875	$138,995

Performing Provider Name: Medical City Dallas

Texas Provider Identifier: 020943901

Medical City Dallas will be reporting all the measurements in 5 reporting domains starting on the designated reporting year. Initial analysis of the current Medical City Dallas healthcare reporting system indicates capability to track and report on some of the required measurements. Some measures are able to be tracked and reported but are not consistently produced or reported. Implementation of new data gathering requirements and improvement of the current reporting infrastructure to fulfill reporting requirement for each of the 5 Category 4 domains will be carried out during DY2 and DY3. We anticipate having full Category 4 reporting capability for all Category 1, and 2 projects and Category 3 outcomes by the end of DY3

Domain #1 – Potentially Preventable Admissions (8 measures)

Medical City Dallas currently tracks and reports 2 of the 8 measurements for public reporting. Measurements that have not yet been addressed are:

- Congestive heart Failure Admission Rate
- Diabetes Admission Rates
- Behavioral Health and Substance Abuse Admission Rate
- Chronic Obstructive Pulmonary Disease or Asthma in Adults Admission Rate
- Hypertension Admission rate
- Pediatric Asthma

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Medical City Dallas will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to Medical City Dallas patients in multiple areas, resulting in improvement of PPAs throughout all measurements in the Reporting Domain.

The following proposed projects related to Reporting Domains:

- Expanding Telepsychiatry to Emergency Rooms supports access to specialty care. This will allow access to appropriate assessment, treatment and disposition to prevent unnecessary inpatient admission.
- Establish a Primary care Clinic for Pediatrics in North Dallas gives patients access to a medical home. With access to a medical provider and programs such as Illness to

Wellness Program for children with acute and chronic diseases, Healthy Babies and Healthy Kids programs for preventive care such as immunizations we believe admissions can be avoided in particular for chronic disease such as asthma. With appropriate parent education about providing proper care to new born children and proper instruction on how to and when to access services, particularly during a child's first two years we believe admissions can be avoided.

- Expanding the medical home of patients who are medically indigent will allow for more effective care. Patients are assigned to a "home" with a health care team who provides services based on a patient's unique health needs, effectively coordinates the patient's care across inpatient and outpatient settings and proactively provides preventive, primary, routine and chronic care. We believe admissions particularly for chronic diseases such as Congestive Heart Failure, Diabetes, COPD and Hypertension can be avoided with comprehensive primary care.

- Integrating Primary and Behavioral Health care will allow patients to have their psychiatric and medical care addressed at the same site by providers who will coordinate their care. We believe providing primary care in a collaborative manor to patients with behavioral health issues and particularly those patients with existing chronic diseases will prevent admissions.

We expect Behavioral Health and Substance Abuse admissions to be reduced by 20% from DY 2 to DY 5, Behavioral Health and Substance Abuse readmissions will be reduced 10% from DY 2 to DY5, Pediatric Asthma ED Visits will be reduced by 15 % by DY5 and Admissions for chronically ill patients in medical home will be reduced by 25 % from DY 2 to DY 5.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #2 – 30 Day Readmissions (7 measures)

Medical City Dallas currently tracks and reports 2 of the 7 measurements for public reporting. Measurements that have not yet been addressed are:

- Diabetes: 30-Day Readmissions
- Behavioral Health & Substance Abuse: 30-Day Readmissions
- Chronic Obstructive Pulmonary Disease (COPD): 30-Day Readmissions
- Stroke: 30- Day Readmissions
- Pediatric Asthma: 30-Day Readmissions

Currently, HHSC will provide potentially preventable event data to providers for reporting. In addition, Medical City Dallas will expand existing data collecting system and optimize old system for new reporting processes.

In addition, DSRIP projects will provide interventions to patients in multiple areas, resulting in improvement of PPRs throughout all measurements in the Reporting Domain.

The proposed project for Sepsis improvement involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the hospital and what they must take after discharge, effective medication management is vital for continued care of sepsis and reduced risk for readmissions.

Expanding Telepsychiatry to Emergency Rooms supports access to specialty care. This will allow access to appropriate assessment, treatment and disposition rather than inpatient admission.

Establishing a Primary care Clinic for Pediatrics in North Dallas gives patients access to a medical home. With access to a medical provider, post-discharge care can be coordinated with the provider for improvements in care transitions from inpatient to outpatient, post-acute care, and home care settings in order to prevent increased health care costs and hospital readmissions.

Expanding the medical home of patients who are medically indigent will allow for more effective care. Patients are assigned to a “home” with a health care team who provides services based on a patient’s unique health needs, effectively coordinates the patient’s care across inpatient and outpatient settings and proactively provides preventive, primary, routine and chronic care. We believe re-admissions particularly for chronic diseases such as Congestive Heart Failure, Diabetes, COPD and Hypertension can be avoided with comprehensive primary care follow-up from admission.
Integrating Primary and Behavioral Health care will allow patients to have their psychiatric and medical care addressed at the same site by providers who will coordinate their care. Transitioning care from an inpatient setting to post-discharge can be difficult with lack of

provider availability and behavioral health complexities to address. A setting in which primary and behavioral health are managed provided a more comprehensive continuity of a care to address medications and discharge instructions and can prevent re-admissions with collaborative approach of addressing unique needs of the patients.

We expected Behavior Health and Substance Abuse Re-Admissions to be reduced by 10% by DY 5.

Domain Valuation:
The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

Currently, 15 of the sixty four measurements are being tracked and reported in a form of public healthcare statistics. All other measures are tracked and reported internally

Currently, HHSC will make potentially preventable event data to providers. In addition, Medical City Dallas will expand existing data collecting system and optimize old system for new reporting processes.

In addition, many DSRIP projects will provide interventions to patients in multiple areas, resulting in improvement of PPCs throughout all measurements in the Reporting Domain.
The proposed project to implement an innovative program for Sepsis improvement aims to identify /diagnosis Sepsis sooner and begin evidence based treatment to reduce mortality and complications for septic shock and severe sepsis.
Improved sepsis care reduces complications particularly those common in septic patients such as pulmonary embolism, acute myocardial infarction, venous thrombosis, major liver complications, renal failure with and without Dialysis and encephalopathy. In addition, with active surveillance of inpatients for signs of sepsis, complications such as shock and severe infections in the identified patients can be prevented. The project also will focus on reducing the average length of stay for sepsis patients. Reducing the length of stay of patients diagnosed

with sepsis will also impact a reduction in complications. Evidence shows with increased length of stay there is increased risk of preventable complications.

Expanding a Telemedicine for stroke will allow for greater access to specialty care and rapid triage and management of stroke that can decrease preventable complications. By providing increase access to both the standard of care and cutting –edge therapies in acute stroke, we will be able to improve complication rates of intracerebral hemorrhage (sICH), pneumonia, venous thrombosis, ulcers and DVTe's.
The project also will focus on reducing the average length of stay for stroke patients. Reducing the length of stay of patients will also impact a reduction in complications. Evidence shows with increased length of stay there is increased risk of preventable complications.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #4 – Patient-Centered Healthcare (2 measures)

Currently, 2 of the two measurements are being tracked and reported.

Patient Satisfaction is surveyed by Gallup for HCAHPS requirements. It is reported internally each week for preliminary results. As required, final results are report to CMS and posted publically. Publicly reported HCAHPS results are based on four consecutive quarters of patient surveys. CMS publishes participating hospitals' HCAHPS results on the Hospital Compare website (www.hospitalcompare.hhs.gov) four times a year, with the oldest quarter of patient surveys rolling off as the most recent quarter rolls on. Additional HCAHPS results can be found on HCAHPS On-Line, (www.hcahpsonline.org).

Medication management is only reported publically as a required element of certain CORE MEASURES reporting. However, it is tracked and reported internally for all inpatients by the quality department as a patient safety and quality of care measurement.

Medical City Dallas will expand existing data collecting system and optimize old system for new reporting processes as necessary.

In addition, Medical City Dallas has proposed several quality-based projects that will provide improvement of care to all Medical City Dallas patients in multiple areas, resulting in improvement patient satisfaction throughout all measurements in the Reporting Domain.

The proposed project for process improvement for Sepsis care involves the timely identification/diagnosis of sepsis and evidence based treatment for patients. Improving processes in this program includes effective communication. The communication between the emergency room, doctors, nurses/ care givers and families for these critically ill patients is vital to the plan of care. Teaching patients and families the cause and symptoms of sepsis is also important for care management. Patient satisfaction is improved with effective communication.

It is also important for Sepsis patients to be placed on the right medications (right antibiotics, vasopressors, etc.) as a part of evidence based care. To ensure patients know what medications they were on in the hospital and what they must take after discharge, effective medication management if vital for continued care of sepsis.

Expanding Telepsychiatry to Emergency Rooms supports access to specialty care. Patient experience and satisfaction with their doctors and hospital can be improved with physicians having better knowledge of patients' medical and behavioral health treatment. Access to psychiatrist can also assist with appropriate medication and dosage for psychiatric medications while being treated for acute medical conditions. This will improve the information available for better medication management.

Expanding telemedicine for stroke care also supports access to specialty care. Patient experience and satisfaction with their doctors and hospital can be improved with physicians having better knowledge of patients' medical treatment that is required. With improvement in stroke care, there can be less transfers and appropriate, safe and timely treatment for patients presenting with stroke symptoms.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Domain #5 – Emergency Department (1 measure)

Domain Description:

Medical City Dallas currently tracks and reports Admit decision time to ED departure for admitted patients for JCAHO and internal quality requirements. The current tracking system is already in place and will be modified or improved as necessary to satisfy the requirement of new reporting domain

In addition, several DSRIP projects will provide interventions to patients in multiple areas, resulting in improvement in the Reporting Domain.

The proposed project for Sepsis improvement involves the timely identification and evidence based treatment of patients. A key component of a Sepsis protocol is the timely identification/diagnosis of septic shock/severe sepsis to admit and begin evidence based treatment. Process improvements implemented for sepsis protocols in the ED support the goal of less than 1 hour for ED admit/ departure (decision time) for critical patients.

Expanding a Telemedicine for stroke will allow for greater access to specialty care and rapid triage and management of stroke. Specialists help emergency room physicians in the decision making process for appropriate treatment for their patients who suffer acute stroke. The program developed best evidence-based protocols in ED and the telestroke goal is to deliver bi-directional consult and start treatment within 1 hour of request promoting a less than 1 hour ED admit time.

Expanding Telepsychiatry to Emergency Rooms supports timely access to specialty care. This will allow access to appropriate assessment, treatment and disposition for patients in the ED. Patients will no longer be "boarded" in ED requiring staff and physician time until disposition can be determined which is typically 24 hours to 3 days. Timely treatment of ED behavioral health patients support the goal of less than 1 hour for ED admit/ departure (decision time) for critical patients by unclogging ED beds and allowing physicians and staff to treat other patients timely.

Domain Valuation:

The total Category 4 value was determined to be at the maximum allowed (10%) per the approved Program Funding and Mechanics Protocol for the Delivery System Incentive Reform Payment pool. Based on the total value of category 4, each domain was valued equally as a proportion of total.

We felt the value of each population focused improvement was equally important to the overall reporting of measurements. The resources needed for tracking, and gather data and reporting were not deemed materially different to warrant significant valuation variances amount the domains or measures.

Grand Total Payments Across Category 4	$328,555	$757,850	$811,076	$881,215

Performing Provider Name: Methodist Charlton Medical Center

Texas Provider Identifier: 126679303

Domain #1 – Potentially Preventable Admissions (8 measures)

- **Description** – Methodist Charlton Medical Center will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions (PPAs), which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Methodist Charlton Medical Center expects that its provision of expanded primary care services under its Category 2 projects will reduce the number of PPAs over the life of the Waiver. Patients with chronic diseases may also be aided in being better able to engage in self-management goals and activities of daily living through Methodist Charlton Medical Center's work with other primary care providers.

Valuation Rationale/Justification – The value Methodist Charlton Medical Center placed on this domain is based on the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in RHP 9 will have a beneficial impact on individual patient outcomes and reduce the financial burden of paying for PPAs. Currently, a significant number of hospitalizations can be linked to manageable chronic diseases that Methodist Charlton Medical Center intends to address with its Category 2 projects to expand access to primary care and specialty care.

Domain #2 – 30 Day Readmissions (7 measures)

- **Description** – Methodist Charlton Medical Center will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Methodist Charlton Medical Center expects that its provision of expanded primary care services through local clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR. Expanded access to primary care and specialty care support at local clinics should also have a positive impact on the rate of readmissions to the hospital.

Valuation Rationale/Justification - The value Methodist Charlton Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs in RHP Region 9 will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

- **Description** – Methodist Charlton Medical Center will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Methodist Charlton Medical Center is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Methodist Charlton Medical Center expects that its Category 2 projects to expand access to primary care will reduce the strain on hospital resources (including staff, space, and equipment). With the reduction in avoidable hospital visits, Methodist Charlton Medical Center can redirect its efforts to making the changes and/or improvements necessary to reduce the number of PPCs during the life of the Waiver. The ongoing quality improvement activities which constitute an essential part of many of Methodist Charlton Medical Center' Category 2 and 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout LPDS.

Valuation Rationale/Justification - The value Methodist Charlton Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress.

Domain #4 – Patient-Centered Healthcare (2 measures)

- **Description** – Methodist Charlton Medical Center will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Methodist Charlton Medical Center is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Methodist Charlton Medical Center expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Methodist Charlton Medical Center's Category 2 projects to enhance interpretation services and culturally competent care, because when patients receive easily-understandable, culturally competent care, they will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

Valuation Rationale/Justification - The value Methodist Charlton Medical Center placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Methodist Charlton Medical Center and how well Methodist Charlton Medical Center performs its function of promoting medication management. Methodist Charlton Medical Center is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in North Texas is costly to patients' health and to the delivery system, and Methodist Charlton Medical Center believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community.

Domain #5 – Emergency Department (1 measure)

- **Description** – Methodist Charlton Medical Center will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers. The patients may experience poor health outcomes as a result of delays in evaluation and lengthy waits that may lead to

the patient leaving without being seen. Methodist Charlton Medical Center is committed to reducing its ED admitting decision time to ED departure if it is not within the recommended < 1 hour threshold. One cause of extended ED departure times results from an overcrowded ED. Methodist Charlton Medical Center intends to expand access to primary care for patients who currently are unable to access primary care due to their financial situation, which Methodist Charlton Medical Center expects will reduce the number of inappropriate ED visits.

Valuation Rationale/Justification - The value Methodist Charlton Medical Center placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, failure to be seen, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress.

Category 4: Population-Focused Measures *Methodist Charlton Medical Center/126679303*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**

Performing Provider Name: Methodist Dallas Medical Center

Texas Provider Identifier: 135032405

Domain #1 – Potentially Preventable Admissions (8 measures)

- **Description** – Methodist Dallas Medical Center will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions (PPAs), which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Methodist Dallas Medical Center expects that its provision of expanded primary care services under its Category 2 projects will reduce the number of PPAs over the life of the Waiver. Patients with chronic diseases may also be aided in being better able to engage in self-management goals and activities of daily living through Methodist Dallas Medical Center's work with other primary care providers.

Valuation Rationale/Justification – The value Methodist Dallas Medical Center placed on this domain is based on the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in RHP 9 will have a beneficial impact on individual patient outcomes and reduce the financial burden of paying for PPAs. Currently, a significant number of hospitalizations can be linked to manageable chronic diseases that Methodist Dallas Medical Center intends to address with its Category 2 projects to expand access to primary care and specialty care.

Domain #2 – 30 Day Readmissions (7 measures)

- **Description** – Methodist Dallas Medical Center will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Methodist Dallas Medical Center expects that its provision of expanded primary care services through local clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR. Expanded

access to primary care and specialty care support at local clinics should also have a positive impact on the rate of readmissions to the hospital.

Valuation Rationale/Justification - The value Methodist Dallas Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs in RHP Region 9 will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs.

Domain #3 – Potentially Preventable Complications, PPC (1 measure, but 64 reportable metrics)

- **Description** – Methodist Dallas Medical Center will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Methodist Dallas Medical Center is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Methodist Dallas Medical Center expects that its Category 2 projects to expand access to primary care will reduce the strain on hospital resources (including staff, space, and equipment). With the reduction in avoidable hospital visits, Methodist Dallas Medical Center can redirect its efforts to making the changes and/or improvements necessary to reduce the number of PPCs during the life of the Waiver. The ongoing quality improvement activities which constitute an essential part of many of Methodist Dallas Medical Center' Category 2 and 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout LPDS.

Valuation Rationale/Justification - The value Methodist Dallas Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 1: Potentially Preventable Admissions (8 measures)
Domain Description:

1- Congestive Heart Failure Admission Rate
2- *Diabetes Admission Rate*
3- Behavioral Health and Substance Abuse Admission Rate
4- *Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Adults Admission Rate*
5- *Hypertension Admission Rate*
6- Pediatric Asthma – NA
7- Bacterial Pneumonia Immunization
8- Influenza Immunization

Parkland projects that will impact potentially preventable admission rates for chronic conditions such as CHF (1), Diabetes (2), COPD (4) and Hypertension (5) are listed below. Parkland intends to reduce preventable admissions for chronic conditions by increasing access to primary and specialty care, expanding the medical home model and implementing a chronic care model for those patients with specific chronic conditions. Parkland will establish a chronic disease management registry to track and monitor care and assign patients to medical homes/care teams. As a function of chronic disease management and medical home assignment, patients will receive preventive care such as immunizations (7,8), patients on persistent medications will be monitored for use of ACE inhibitors and ARBs and patients with certain conditions such as diabetes will receive recommended care/treatment such as retinal eye exams and foot exams. Parkland projects will have no impact on pediatric asthma (6).

COPD (4). Additional research needs to be done on the COPD patient population. Once the research is complete and as a function of chronic disease management and medical home assignment, patients with COPD will be enrolled in the chronic care model/registry and assigned to medical homes.

Behavioral (3). The 2011 NCQA Medical Home standards require implementation of evidence-based guidelines for "unhealthy behavior, mental health or substance abuse." Patients assigned to medical homes within Parkland's primary care network will receive appropriate care based on their behavioral health needs as well as their medical needs. Treatment plans will be created by the care team, which will include primary care and behavioral health providers. The medical home model provides appropriate care for patients with medical and behavioral needs and should reduce potentially preventable admission rates for this population.

Category 1 Projects
127295703.1.1 (1.1.2) Expand Primary Care Capacity – Grand Prairie Clinic
127295703.1.2 (1.1.2) Expand Existing Primary Care Capacity
127295703.1.3 (1.3.1) Implement Chronic Disease Management Registry
127295703.1.5 (1.9.2) Expand Specialty Care Capacity

127295703.1.6 (1.1.1) Establish Primary Care Clinics – Acute Response Clinic
Category 2 Projects
127295703.2.1 (2.1.1) Enhance/Expand Medical Home Model
127295703.2.4 (2.2.1) Expand Chronic Care Management Model
127295703.2.11 (2.1.1) Enhance/Expand Medical Home Model – Family Medicine

Reporting Cycle: Calendar Year (HHSC data source)

Domain Valuation:

Approach/Methodology

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DSRIP Year (DY) were divided by the number of reporting domains to calculate the value for each domain and DSRIP Year.

Rationale/Justification

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. The rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)
Domain Description:

1- *Congestive Heart Failure: 30-Day Readmission Rate*
2- *Diabetes: 30-Day Readmission Rate*
3- *Behavioral Health and Substance Abuse: 30-Day Readmission Rate*
4- *Chronic Obstructive Pulmonary Disease (COPD): 30-Day Readmission Rate*
5- *Stroke: 30-Day Readmission Rate*
6- *Pediatric Asthma: N/A*
7- *All-Cause: 30-Day Readmission Rate*

Parkland category will impact readmission rates (including readmissions for All Cause #7) for the above chronic conditions including CHF (1) and Diabetes (2) through the projects listed below. Parkland intends to reduce preventable readmissions for patients with chronic conditions by increasing access to primary and specialty care, expanding the medical home model and implementing a chronic care model for those patients with specific chronic conditions. Parkland will establish a chronic disease management registry to track and monitor care and assign patients to medical homes/care teams. Care management and care coordination of patients with chronic conditions will reduce unnecessary utilization of services such as the ED and will reduce preventable readmissions. Parkland projects will have little to no effect on stroke readmissions (5) and pediatric asthma (6).

COPD (4). Additional research needs to be done on the COPD patient population. Once the research is complete, patients with COPD will be enrolled in the chronic care model/registry and assigned to medical homes.

Behavioral (3). The 2011 NCQA Medical Home standards require implementation of evidence-based guidelines for unhealthy behavior, mental health or substance abuse. Patients assigned to medical homes within Parkland's primary care network will receive appropriate care based on their behavioral health needs as well as their medical needs. Treatment plans will be created by the care team, which will include primary care and behavioral health providers. The medical home model provides appropriate care for patients with medical and behavioral needs and should reduce potentially preventable readmission rates for this population.

In addition to the above, Parkland will establish a comprehensive care coordination program that includes a patient navigator program and a care transitions program. These programs will provide patient-focused services to assist patients in getting to their next step/level of care (whether to a medical home or post-acute service) which will increase compliance with treatment/recovery protocols. Parkland will review the cost-effectiveness of post-acute alternatives to insure patients have access to post-acute services. Parkland will also implement a comprehensive system-wide Quality and Performance Improvement function that will target

quality indicators such as PPAs/PPRs/PPCs. Projects will be identified and prioritized to provide organizational focus to specific clinical improvements. Such projects will utilize performance improvement methodologies such as LEAN to make necessary improvements to the care process/delivery system. Parkland also intends to expand the Outpatient Parenteral Antimicrobial Therapy Program for patients to provide self-care at home with a PICC line.

Category 1 Projects
127295703.1.1 (1.1.2) Expand Primary Care Capacity – Grand Prairie Clinic
127295703.1.2 (1.1.2) Expand Existing Primary Care Capacity
127295703.1.3 (1.3.1) Implement Chronic Disease Management Directory
127295703.1.4 (1.10.4) Enhance Performance Improvement and Reporting Capacity
127295703.1.5 (1.9.2) Expand Specialty Care Capacity
127295703.1.6 (1.1.1) Establish Primary Care Clinics - Acute Response Clinic
Category 2 Projects
127295703.2.1 (2.1.1) Enhance/Expand Medical Home Model
127295703.2.4 (2.2.1) Expand Chronic Care Management Model
127295703.2.7 (2.9.1) Enhance Patient Navigation Program
127295703.2.9 (2.12.1) Implement/Expand Care Transitions Program
127295703.2.11 (2.1.1) Enhance/Expand Medical Home Model – Family Medicine
127295703.2.12 (2.8.4) Apply Process Improvement Methodologies to Improve Quality/Efficiency – OPAT Program
Category 3 Related Outcomes
127295703.3.9 (IT-3.3) Diabetes 30-Day Readmission Rate
127295703.3.24 (IT-3.3) Diabetes 30-Day Readmission Rate
127295703.3.31 (IT-3.3) Diabetes 30-Day Readmission Rate
127295703.3.35 (IT-3.3) Diabetes 30-Day Readmission Rate
127295703.3.11 (IT-3.5) AMI 30-Day Readmission Rate
127295703.3.36 (IT-3.5) AMI 30-Day Readmission Rate
127295703.3.10 (IT-3.1) All Cause 30-Day Readmission Rate
127295703.3.30 (IT-3.1) All Cause 30-Day Readmission Rate
127295703.3.34 (IT-3.1) All Cause 30-Day Readmission Rate
127295703.3.38 (IT-3.1) All Cause 30-Day Readmission Rate
127295703.3.43 (IT-3.12) Other – All Cause Readmission Rate for patients enrolled in OPAT program

Domain Valuation:

Approach/Methodology

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DSRIP Year (DY) were divided by the number of reporting domains to calculate the value for each domain and DSRIP Year.

Rationale/Justification

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. The rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 3: Potentially Preventable Complications (64 measures)
Domain Description:

Parkland's will improve potentially preventable complication rates through two submitted projects – one by enhancing performance improvement and reporting capacity across the health system and the second by applying process improvement methodologies to improve quality and efficiency to improve Sepsis, CLABSI, SSI, and CAUTI rates. Improving the reporting capacity function for process improvement will allow teams to easily identify areas for improvement, develop targeted initiatives, utilize evidence-based best practice methodologies such as LEAN to make improvements and then monitor progress toward improvement. Projects and related outcomes specific to improvements in potentially preventable complication rates are listed below.

Category 1 Projects
127295703.1.4 (1.10.4) Enhance Performance Improvement and Reporting Capacity
Category 2 Projects
127295703.2.6 (2.8.11) Apply Process Improvement Methodology to Improve Quality/Efficiency
Category 3 Related Outcomes
127295703.3.12 (IT-4.2) Central Line-Associated Bloodstream Infection (CLABSI) Rate
127295703.3.27 (IT-4.2) Central Line-Associated Bloodstream Infection (CLABSI) Rate
127295703.3.28 (IT-4.3) Catheter-Associated Urinary Tract Infection (CAUTI) Rate
127295703.3.29 (IT-4.4) Surgical Site Infection (SSI) Rate
127295703.3.44 (IT-4.8) Sepsis Mortality

Reporting Cycle: Calendar Year (HHSC data source)

Domain Valuation:

All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. The rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 4: Patient-Centered Healthcare (2 measures)
Domain Description:

1- Patient Satisfaction
2- *Medication Management*

Patient Satisfaction is surveyed by Press Ganey for HCAHPS requirements. It is reported internally and as required, final results are reported to CMS and posted publically. CMS publishes participating hospitals' HCAHPS results on the Hospital Compare website (www.hospitalcompare.hhs.gov) four times a year, with the oldest quarter of patient surveys rolling off as the most recent quarter rolls on. Additional HCAHPS results can be found on HCAHPS On-Line, (www.hcahpsonline.org).

Parkland's proposed project to "Improve Patient Experience" focuses on improving patient satisfaction. To meet this goal and support institution-wide enhancement of customer service delivery, restructuring and centralization of customer service is required. A Service Excellence Manager position will be established whose purview will include responsibilities for coordinating hospital-wide performance improvement initiatives and unit-level service excellence consulting. This role is a well-established industry "Best Practice" model for customer service enhancement and ultimately the improvement of patient satisfaction scores on standardized surveys.

Another project to improve patient satisfaction is the enhancement of interpretation services for Parkland patients whose primary language is Spanish (approximately 40% of Parkland's patients). Improved communication is linked to improved patient satisfaction and is a key objective for Parkland.

Category 1-2 Projects
127295703.1.7 (1.4.7) Enhance Interpretation Services
127295703.2.10 (2.4.3) Increase Patient Satisfaction
Category 3 Related Outcomes
127295703.3.37 (IT-6.1) Percent Improvement over baseline for patient satisfaction scores
127295703.3.45 (IT-6.1) Percent improvement over baseline for patient satisfaction scores

Medication management is only reported publically as a required element of certain CORE MEASURES reporting. Through the Quality and Performance Improvement Department, Parkland intends to expand data collection for the health system in order to improve reporting capabilities and meet reporting requirements.

Reporting Cycle: Parkland's fiscal year (October 1-September 30)

Domain Valuation:

Approach/Methodology

All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DSRIP Year (DY) were divided by the number of reporting domains to calculate the value for each domain and DSRIP Year.

Rationale/Justification

Each domain focuses on outcomes that will positively impact the community and each of the performing providers. The rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 5: Emergency Department (1 measure)
Domain Description:

The project that will improve throughput in Parkland's Emergency Department is listed below. The implementation of these projects will improve throughput in the emergency department through care teams that will be charged with improvements in transferring and discharging patients as well as patient hand offs. The improved flow of patients through the inpatient setting will positively impact the time from "decision to admit to transfer" of patients from the emergency department to the inpatient setting.

Category 1 Projects
127295703.1.1 (1.1.2) Expand existing primary care capacity – Grand Prairie
127295703.1.2 (1.1.2) Expand existing primary care capacity
127295703.1.3 (1.3.1) Implement chronic care registry
127295703.1.5 (1.9.2) Expand specialty care access
127295703.1.6 (1.1.1) Establish primary care clinics – Acute Response
Category 2 Projects
127295703.2.1 (2.1.1) Enhance/expand medical home model - COPC
127295703.2.4 (2.2.1) Expand chronic care model
127295703.2.7 (2.9.1) Enhance Patient Navigation Program
127295703.2.8 (2.10.1) Implement a palliative care program
127295703.2.11 (2.1.1) Enhance/expand medical home model - Family Medicine
127295703.2.12 (2.8.4) Apply Process Improvement methodology to improve quality/ efficiency – OPAT Program
Category 3 Projects
127295703.3.14 (IT-9.2) ED Appropriate Utilization
127295703.3.32 (IT-9.2) ED Appropriate Utilization
127295703.3.33 (IT-13.3) Palliative Care: Proportion of patients w/ one or more ED visits in the last 30 days of life

Reporting Cycle: Parkland's fiscal year (October 1-September 30)

Domain Valuation:

Approach/Methodology
All Region 9 providers required to participate in Category 4 reporting have taken no more than the 10% allocation and forgone the optional reporting domain. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DSRIP Year (DY) were divided by the number of reporting domains to calculate the value for each domain and DSRIP Year.

Rationale/Justification
All of the required reporting domains are pertinent in transforming the healthcare of RHP 9. Each domain focuses on outcomes that will positively impact the community and each of the performing providers. The rigor of data collection is the same for each domain. Thus, we valued each of the outcome domains at the same dollar amount.

Performing Provider Name/TPI: Parkland Health & Hospital System/127295703

Domain 6: Optional Domain
Domain Description:

At a minimum, providers participating in RD-6 must complete the following measures or provide explanation as to why they cannot be reported.

Initial Core Set of Health Care Measures for Children in Medicaid and CHIP

- Percentage of Live Births Weighing less than 2,500 grams
- Cesarean Rate for Nulliparous Singleton Vertex
- Ambulatory Care: Emergency Department Visits
- Pediatric Central-Line associated Bloodstream Infections—Neonatal Intensive Care Unit and Pediatric Intensive Care Unit

Parkland will not report the following measures for Children:

- Ambulatory Care: ED visits - Children go to Children's Medical Center for ED services
- Pediatric Central Line-Associated Bloodstream Infections – Parkland does measure BSI in the NNICU; however Parkland does not have a Pediatric ICU (Children are sent to Children's Medical Center)

Initial Core Set of Health Care Measures for Medicaid-Eligible Adults

- Plan All-Cause Readmission
- Diabetes, Short-term Complications Admission Rate
- COPD Admission Rate
- CHF Admission Rate
- Adult Asthma Admission Rate
- Elective Delivery
- Antenatal Steroids
- Care Transitions

Parkland intends to report as required the above measures for the adult population. Several of the above measures including admission and readmission rates have been addressed in other Category 4 domains. The Diabetes, COPD, CHF and Adult Asthma Admission Rates will be addressed through the chronic care projects (implement registry/model).

The measures not addressed in Parkland's submitted projects include:

- Adult Asthma Admission Rate
- Elective Delivery
- Antenatal Steroids

Category 1 Projects
127295703.1.1 (1.1.2) Expand existing primary care capacity – Grand Prairie
127295703.1.2 (1.1.2) Expand existing primary care capacity
127295703.1.3 (1.3.1) Implement chronic care registry
127295703.1.5 (1.9.2) Expand specialty care access
127295703.1.6 (1.1.1) Establish primary care clinics – Acute Response
Category 2 Projects
127295703.2.1 (2.1.1) Enhance/expand medical home model
127295703.2.4 (2.2.1) Expand chronic care model – COPC
127295703.2.11 (2.1.1) Enhance/expand medical home model – Family Medicine
Category 3 Projects
127295703.3.1 (IT-1.2) Annual Monitoring of persistent medications: A CE inhibitors or ARBS
127295703.3.4 (IT-1.2) Annual Monitoring of persistent medications: ACE inhibitors or ARBS
127295703.3.7 (IT-1.2) Annual Monitoring of persistent medications: ACE inhibitors or ARBS
127295703.3.15 (IT-1.2) Annual Monitoring of persistent medications: ACE inhibitors or ARBS
127295703.3.22 (IT-1.2) Annual Monitoring of persistent medications: ACE inhibitors or ARBS

Planned Reporting Period: 1 (October 1 – March 31)
2 (April 1 – September 30)

Performing Provider Name: Doctors Hospital at White Rock Lake

Performing Provider TPI: 094194002

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Doctors Hospital at White Rock Lake will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions (PPAs), which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Doctors Hospital at White Rock Lake expects that its provision of expanded primary care services under its Category 2 projects will reduce the number of PPAs over the life of the Waiver. Patients with chronic diseases may also be aided in being better able to engage in self-management goals and activities of daily living through Doctors Hospital at White Rock Lake's work with other primary care providers.
- **Valuation Rationale/Justification** – The value Doctors Hospital at White Rock Lake placed on this domain is based on the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in RHP 9 will have a beneficial impact on individual patient outcomes and reduce the financial burden of paying for PPAs. Currently, a significant number of hospitalizations can be linked to manageable chronic diseases that Doctors Hospital at White Rock Lake intends to address with its Category 2 projects to expand access to primary care and specialty care. Doctors Hospital at White Rock Lake values this reporting domain at $105,746 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Doctors Hospital at White Rock Lake will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Doctors Hospital at White Rock Lake expects that its provision of expanded primary care services through local clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR. Expanded

access to primary care and specialty care support at local clinics should also have a positive impact on the rate of readmissions to the hospital.

- **Valuation Rationale/Justification** - The value Doctors Hospital at White Rock Lake placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs in RHP Region 9 will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Doctors Hospital at White Rock Lake values this reporting domain at $105,746 over Demonstration Years 3-5.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Doctors Hospital at White Rock Lake will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Doctors Hospital at White Rock Lake is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Doctors Hospital at White Rock Lake expects that its Category 2 projects to expand access to primary care will reduce the strain on hospital resources (including staff, space, and equipment). With the reduction in avoidable hospital visits, Doctors Hospital at White Rock Lake can redirect its efforts to making the changes and/or improvements necessary to reduce the number of PPCs during the life of the Waiver. The ongoing quality improvement activities which constitute an essential part of many of Doctors Hospital at White Rock Lake' Category 2 and 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout LPDS.
- **Valuation Rationale/Justification** - The value Doctors Hospital at White Rock Lake placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our

starting point and tracking our improvement is essential to making progress. Doctors Hospital at White Rock Lake values this reporting domain at $78,331 over Demonstration Years 4-5.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Doctors Hospital at White Rock Lake will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Doctors Hospital at White Rock Lake is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Doctors Hospital at White Rock Lake expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Doctors Hospital at White Rock Lake's Category 2 projects to enhance interpretation services and culturally competent care, because when patients receive easily-understandable, culturally competent care, they will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value Doctors Hospital at White Rock Lake placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Doctors Hospital at White Rock Lake and how well Doctors Hospital at White Rock Lake performs its function of promoting medication management. Doctors Hospital at White Rock Lake is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in North Texas is costly to patients' health and to the delivery system, and Doctors Hospital at White Rock Lake believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Doctors Hospital at White Rock Lake values this reporting domain at $105,744 over Demonstration Years 3-5.

Domain 5: Emergency Department (1 measure)

- **Description** – Doctors Hospital at White Rock Lake will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers. The patients may experience poor health outcomes as a result of delays in evaluation and lengthy waits that may lead to the patient leaving without being seen. Doctors Hospital at White Rock Lake is committed to reducing its ED admitting decision time to ED departure if it is not within the recommended < 1 hour threshold. One cause of extended ED departure times results from an overcrowded ED. Doctors Hospital at White Rock Lake intends to expand access to primary care for patients who currently are unable to access primary care due to their financial situation, which Doctors Hospital at White Rock Lake expects will reduce the number of inappropriate ED visits.
- **Valuation Rationale/Justification** - The value Doctors Hospital at White Rock Lake placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, failure to be seen, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Doctors Hospital at White Rock Lake values this reporting domain at $105,743 over Demonstration Years 3-5.

Domain 6: Optional Domain: Initial Core Set of Health Care Quality Measures (13 measures)

- **Description** - Doctors Hospital at White Rock Lake will report on CMS' Initial Core Set of Measures for Adults and Children in Medicaid/CHIP. These measures are important because the overarching goal of delivery system reform is to improve the quality of care provided to members of the community who are often underserved, including indigent children and adults. Doctors Hospital at White Rock Lake is committed to providing quality care to all patients, regardless of ability to pay. Accordingly, Doctors Hospital at White Rock Lake has developed and plans to implement Category 2 and 3 projects which will serve the common need of the Dallas community's diverse patient populations for quality and effective care through more effective care transitions and partnership with the Mission East Dallas medical home. More specifically, the tracking and reporting of this domain's measures for children will enable Doctors Hospital at White Rock Lake to perform more effectively its core mission of providing health care to children in the Dallas community.

- **Valuation Rationale/Justification** – The value Doctors Hospital at White Rock Lake placed on this domain is based upon the value the hospital attributes to providing quality care to patients and maintaining a level of consistency in its provision of care. Medicaid and CHIP participants make up a large portion of the consumers of healthcare, and therefore the quality of care provided to this population is indicative of systemic practices. Understanding our starting point and tracking our improvement is essential to making progress. Doctors Hospital at White Rock Lake values this reporting domain at $58,747 over Demonstration Years 3-5.

Category 4: Population-Focused Measures Doctors Hospital at White Rock Lake – TPI: 094194002				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.		
Estimated Maximum Incentive Amount	$40,737	$27,415		
Domain 1: Potentially Preventable Admissions (PPAs)				
Planned Reporting Period: 1 or 2		1	1	1
Domain 1 - Estimated Maximum Incentive Amount		$27,415	$31,072	$47,259
Domain 2: Potentially Preventable Readmissions (30-day readmission rates)				
Planned Reporting Period: 1 or 2		1	1	1
Domain 2 - Estimated Maximum Incentive Amount		$27,415	$31,072	$47,259
Domain 3: Potentially Preventable Complications (PPCs) -- Includes a list of 64 measures identified in the RHP Planning Protocol.				
Planned Reporting Period: 1 or 2			1	1
Domain 3 - Estimated Maximum Incentive Amount			$31,072	$47,259

Reporting Domain #1 – Potentially Preventable Admissions

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.2

Domain Description:
Currently, all RD-1 measurements are being tracked at reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Dallas (THD) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

Successful Category 1 interventions will lead to health care improvements throughout the waiver period. Implementation of the Continuing Care Clinic (020908201.1.1) will facilitate the reduction of emergency department use and positively impact all-cause admission rate for patients seeking medical care in the Texas Health network.

Category 2 project implementations such as Faith Community Nursing/Health Workers (020908201.2.2) and Healing Hands Ministries (020908201.2.3) will also reduce admission rates for individuals who do not have a place of care other than the emergency department.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and Category 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPA rate.

THD will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Reporting Domain #2 – Potentially Preventable Readmissions

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.3

Domain Description:
Currently, all RD-2 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, THD will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

Successful Category 1 interventions will lead to health care improvements throughout the waiver period. Implementation of the Continuing Care Clinic (020908201.1.1) will facilitate the reduction of emergency department use and positively impact preventable readmission rate for patients seeking medical care in the Texas Health network.

Category 2 project implementations such as Faith Community Nursing/Health Workers (020908201.2.2) and Healing Hands Ministries (020908201.2.3) will also reduce readmissions rates for individuals who do not have a place of care other than the emergency department.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and Category 2 interventions will feed back into Category 4 reporting measures and reduce the overall PPR rate.

THD will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Reporting Domain #3 – Potentially Preventable Complications

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.4

Domain Description:
Currently, all RD-3 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, THD will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THD does not have a project that specifically impacts this reporting domain.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and Category 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPC rate.

THD will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #4 – Patient Centered Healthcare

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.5

Domain Description:

Currently, all RD-4 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, THAM will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THD does not have a project that specifically impacts this reporting domain.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and Category 2 interventions will feed back into Category 4 reporting measures and improve overall patient satisfaction scores.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Reporting Domain #5 – Emergency Department

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.6

Domain Description:

Currently, all RD-5 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, THD will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

Since this particular measure reports on the decision time to transfer an emergency patient to another facility and not the actual transport time, (decision to make the first call form arrival in transferring ED until call initiated) it is advisable that THR work closely with our Care Connect reporting to determine if additional data fields need to be build and collected so a report can be created to meet this NQF 0497 measure. During our preliminary review, it appears that we may be able to utilize a MU report that does capture NQF 0497 for all THR entities participating in MU. In addition, a clear time frame in which the reporting period should encompass needs to be stated clearly.

We expect the Continuing Care Clinic project (020908201.1.1) and the Healing Hands Ministries project (020908201.2.3) to have a positive impact on this domain by helping to navigate patients to appropriate health care resources to assist those with chronic health care needs in receiving ongoing care.

THD will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Option Domain #6 – Children and Adult Core Measures

Performing Provider Name/TPI: Texas Health Dallas (THD)/020908201
Unique RHP identification number: 020908201.4.7

Domain Description:
The child core measure is a domain that THR doesn't have an enough volume to reliably report or for the measurement to be stable and a domain that would not be statistically significant. THR does not meet the minimum volume requirements for publication of these measures by CMS.

Domain Valuation:
THR will not report on RD-6 and, as such, no value has been assigned to this domain.

Category 4: Population-Focused Measures *Texas Health Presbyterian Hospital Dallas/020908201*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**

Repeat table for every hospital reporting Category 4 measures

Reporting Domain #1 – Potentially Preventable Admissions

Performing Provider/TPI: Texas Health Presbyterian Hospital Denton/020967801
Unique RHP identification number: 029067801.4.1

Domain Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Denton (THDN) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Successful Category 2 interventions will lead to health care improvements throughout the waiver period. Implementation of a patient care navigation program (020967801.2.1) will facilitate patient navigation and positively impact all-cause admission rate for patients seeking medical care in the Texas Health network. Expanding diabetes specialty care and patient education in primary care settings (130614405.2.1) will reduce diabetes admission rate. Establishing a heart failure clinic (130614405.2.2) will provide additional post-acute care for heart failure patients. Interventions mentioned above will significantly improve all-cause PPA starting in DY4.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPA rate.

THDN will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Reporting Domain #2 – Potentially Preventable Readmissions

Performing Provider/TPI: Texas Health Presbyterian Hospital Denton/020967801
Unique RHP identification number: 029067801.4.2

Domain Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Denton (THDN) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Successful Category 2 interventions will lead to health care improvements throughout the waiver period. The Establish/Expand a Patient Care Navigation Program (020967801.2.1) will reduce preventable readmissions by navigating patients to appropriate resources after discharge from the hospital. The Chronic Care Management Model (020967801.2.2) will reduce readmissions through management of chronic diseases especially diabetes.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through the successful administration of Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPR rate.

THDN will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #3 – Potentially Preventable Complications

Performing Provider Name/TPI: Texas Health Presbyterian Denton Hospital/020967801
Unique RHP identification number: 029067801.4.3

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Denton (THDN) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Category 3 outcome and Category 4 reporting measure reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPC rate.

THDN will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY4.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #4 – Patient Centered Healthcare

Performing Provider Name/TPI: Texas Health Presbyterian Denton Hospital/020967801
Unique RHP identification number: 020967801.4.4

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Denton (THDN) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions or Category 2 interventions that will directly impact this reporting domain.

Patient satisfaction Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. THDN will begin to report on all required measurements annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #5 – Emergency Department

Performing Provider Name/TPI: Texas Health Presbyterian Denton Hospital/020967801
Unique RHP identifier: 020967801.4.5

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Denton (THDN) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Since this particular measure reports on the decision time to transfer an emergency patient to another facility and not the actual transport time, (decision to make the first call form arrival in transferring ED until call initiated) it is advisable that THR work closely with our Care Connect reporting to determine if additional data fields need to be build and collected so a report can be created to meet this NQF 0497 measure. During our preliminary review, it appears that we may be able to utilize a MU report that does capture NQF 0497 for all THR entities participating in

MU. In addition, a clear time frame in which the reporting period should encompass needs to be stated clearly.

THDN will begin to report on all required measurements annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Option Domain #6 – Initial Core Set of Health Care Quality Measures

Performing Provider Name/TPI: Texas Health Presbyterian Denton Hospital/020967801
Unique RHP identifier: 020967801.4.6

Description:
The child core measure is a domain that THR doesn't have an enough volume to reliably report or for the measurement to be stable and a domain that would not be statistically significant. THR does not meet the minimum volume requirements for publication of these measures by CMS.

Valuation: THR will not report on RD-6 and as such no value has been assigned to this domain.

Category 4: Population-Focused Measures *Texas Health Presbyterian Denton Hospital/ 020967801.2.2*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.		
Estimated Maximum Incentive Amount	$50,356	$29,374		
Domain 1: Potentially Preventable Admissions (PPAs)				
Planned Reporting Period: 1 or 2		1	1	1
Domain 1 - Estimated Maximum Incentive Amount		$29,374	$31,472	$31,472
Domain 2: Potentially Preventable Readmissions (30-day readmission rates)				
Planned Reporting Period: 1 or 2		1	1	1
Domain 2 - Estimated Maximum Incentive Amount		$29,374	$31,472	$31,472
Domain 3: Potentially Preventable Complications (PPCs) Includes a list of 64 measures identified in the RHP Planning Protocol.				
Planned Reporting Period: 1 or 2			1	1
Domain 3 - Estimated Maximum Incentive Amount			$31,472	$31,472
Domain 4: Patient Centered Healthcare				
Patient Satisfaction – HCAHPS				
Measurement period for report		10/1/2012-9/30/2013	10/1/2013-9/30/2014	10/1/2014-9/30/2015
Planned Reporting Period: 1 or 2		1	1	1
Medication Management				
Measurement period for report		10/1/2012-9/30/2013	10/1/2013-9/30/2014	10/1/2014-9/30/2015
Planned Reporting Period: 1 or 2		1	1	1
Domain 4 - Estimated Maximum Incentive Amount		$29,374	$31,472	$31,472
Domain 5: Emergency Department				
Measurement period for report		10/1/2012-9/30/2013	10/1/2013-	10/1/2014-

			9/30/2014	9/30/2015
Planned Reporting Period: 1 or 2		1	1	1
Domain 5 - Estimated Maximum Incentive Amount		$29,374	$31,472	$31,472
OPTIONAL Domain 6: Children and Adult Core Measures				
Frequency of ongoing prenatal care				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Timeliness of prenatal care				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Cesarean rate for low-risk first birth women				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Percent of live births weighing <2500 grams				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Pediatric central-line associated bloodstream infection (CLASBI) rates				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Elective delivery prior to 39 weeks completed gestation				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Appropriate use of antenatal steroids				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Postpartum Care Rate				
Measurement period for report				
Planned Reporting Period: 1 or 2				
Domain 6 - Estimated Maximum Incentive Amount		~~$29,374~~	~~$31,472~~	~~$31,472~~
Grand Total Payments Across Category 4	$50,356	$176,245	$188,834	$188,834

Repeat table for every hospital reporting Category 4 measures

Domain #1 – Potentially Preventable Admissions

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 094140302.4.1

Domain Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Kaufman (THK) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THK is not participating in Category 1 interventions.

Successful Category 2 interventions will lead to health care improvements throughout the waiver period. Implementation of a patient care navigation program (020967801.2.1) will facilitate patient navigation and positively impact all-cause admission rate for patients seeking medical care in the Texas Health network. Expanding diabetes specialty care and patient education in primary care settings (09410302.2.1) will reduce diabetes admission rate. Establishing a heart failure clinic (09410302.2.2) will provide additional post-acute care for heart failure patients. Interventions mentioned above will significantly improve all-cause PPA starting in DY4.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPA rate.

THDN will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Domain Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #2 – Potentially Preventable Readmissions

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 094140302.4.2

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Kaufman (THK) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THK is not participating in Category 1 interventions.

Successful Category 2 interventions will lead to health care improvements throughout the waiver period. The Establish/Expand a Patient Care Navigation Program (09410302.2.1) will reduce preventable readmissions by navigating patients to appropriate resources after discharge from the hospital. The Chronic Care Management Model (09410302.2.2) will reduce readmissions through management of chronic diseases especially diabetes.

Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through the successful administration of Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPR rate.

THK will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #3 – Potentially Preventable Complications, PPC

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 094140302.4.3

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Kaufman (THK) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Category 3 outcome and Category 4 reporting measure reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. In DY4 the improvements in Category 3 outcomes achieved through Category 1 and 2 interventions will feed back into Category 4 reporting measures and reduce the overall all-cause PPC rate.

THK will begin to report on all required measurements in compliance with the HHSC provided risk-adjusted 3M tool annually starting in DY4.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #4 – Patient Centered Healthcare

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 09410302.4.4

Domain Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Kaufman (THK) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THK is not participating in Category 1 interventions or Category 2 interventions that will directly impact this reporting domain.

Patient satisfaction Category 3 outcomes and Category 4 reporting measures reinforce each other by sharing similar measurements. The initial reporting value in DY3 from Category 4 can serve as baseline measurements for Category 3 outcomes. THK will begin to report on all required measurements annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Domain #5 – Emergency Department

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 09410302.4.5

Description:
Currently, all RD-1 measurements are being tracked and reported as public healthcare statistics. In conjunction with the HHSC-provided PPA/PPR/PPC numbers, Texas Health Presbyterian Kaufman (THK) will prepare its data systems for reporting this domain as well.

All data collection and reporting processes will comply with HHSC and AHRQ guidelines. New implementations and modification of the current reporting system will take place during DY2 and DY 3 to optimize system compatibility to match new reporting demands. New protocols will be installed to ensure proper reporting functions. Initial reporting data can be used to establish baseline values for Category 1, and 2 projects, and Category 3 outcomes.

THDN is not participating in Category 1 interventions.

Since this particular measure reports on the decision time to transfer an emergency patient to another facility and not the actual transport time, (decision to make the first call form arrival in transferring ED until call initiated) it is advisable that THR work closely with our Care Connect reporting to determine if additional data fields need to be build and collected so a report can be created to meet this NQF 0497 measure. During our preliminary review, it appears that we may be able to utilize a MU report that does capture NQF 0497 for all THR entities participating in

MU. In addition, a clear time frame in which the reporting period should encompass needs to be stated clearly. There is no DSRIP project associated with this reporting domain and, therefore, no measureable impact is expected for this domain related to the intervention.

THK will begin to report on all required measurements annually starting in DY3.

Valuation:
THR has valued Category 4 at 15% of the total DSRIP allocation for this hospital. As a region, it was determined that each reporting domain was to be valued equally; thus, prescribed DSRIP dollars per DY were divided by the number of reporting domains to calculate the value for each domain and DY.

Optional Reporting Domain #6 – Initial Core Set of Health Care Quality Measures

Performing Provider/TPI: Texas Health Presbyterian Hospital Kaufman/09410302
Unique RHP identification number: 09410302.4.6

Domain Description:
The child core measure is a domain that THR doesn't have an enough volume to reliably report or for the measurement to be stable and a domain that would not be statistically significant. THR does not meet the minimum volume requirements for publication of these measures by CMS.

Domain Valuation:
THR will not report on RD-6 and as such no value has been assigned to this domain.

Category 4: Population-Focused Measures *Texas Health Presbyterian Hospital Kaufman/094140302*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014 – 9/30/2015)**	**Year 5 (10/1/2015 – 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.		
Estimated Maximum Incentive Amount	$36,320	$21,187		
Domain 1: Potentially Preventable Admissions (PPAs)				
Planned Reporting Period: 1 or 2		1	1	1
Domain 1 - Estimated Maximum Incentive Amount		$21,187	$22,700	$22,700

Grand Total Payments Across Category 4	$36,320	$105,934	$113,501	$113,501

Performing Provider: UT Southwestern University Hospitals/175287501

Domain Descriptions:

RD-1. Potentially Preventable Admissions – This Reporting Domain will be affected by all of the following projects

1. 126686802.1.1 – Newly established primary care clinic
2. 126686802.1.2 – Expanding existing primary care network
3. 126686802.1.3 – Implementing a Quality Incentive Program for PCP Network
4. 126686802.1.4 – Introduce a Telemedicine/Telehealth system
5. 126686802.1.5 – Newly established specialty care clinic
6. 126686802.1.6 – Develop population management infrastructure
7. 126686802.1.7 – CME Program expansion for community PCPs
8. 126686802.1.8 – Family Medicine Residency training programs
9. 126686802.1.9 – PA program expansion
10. 126686802.1.10 – Training Community Workers
11. 126686802.1.11 – Urgent Care Service for Cancer Patients
12. 126686802.1.12 – Quality Improvement Center
13. 126686802.2.1 – Expanding Medical Home in PCP Network
14. 126686802.2.2 – Expand Quality Improvement Training
15. 126686802.2.4 – Implement Care Coordination with PCP network
16. 126686802.2.5 – Implement Care Transitions with PCP network
17. 126686802.2.6 – Conduct Medication Management
18. 175287501.1.1 – Transplant Program
19. 175287501.2.1 – Implement ED Navigator Program
20. 175287501.2.2 – Implement Palliative Care Program
21. 175287501.2.3 – Transitional Care Services for Cancer Inpatients

Each of these projects will contribute to reducing potentially preventable admissions. Projects 1-6 provide greater access to ambulatory care and additional tools for Primary Care Providers to help patients manage their health with going to the ED or into the hospital. Projects 7-8 involve education providers to use more health care and population management tools to help patients stay healthier. Project 11 and 19 are particularly important in helping cancer patients urgent care support at their ambulatory clinic rather than resorting to an ED visit when complications arise. In its first month of operation, this project document over 40 prevented admissions. Project 19 works with patients when they arrive at the ED to get quicker attention and/or referral to more appropriate settings. Projects 15 and 16 help patient get the next step of care that is too often missed, which can lead to complications in health/disease management and in turn into a PPA. Projects 20 and 21 are also very important in ensuring that patients transition from inpatient settings to either immediate follow-up or appropriate post-acute services that can prevent re-admissions because they focus on continuity.

The associated Category 3 Outcome measures all contribute to managing patients for better outcomes and avoidance of complications that can lead to PPAs. Outcomes measures focusing on Diabetes tests, blood pressure monitoring and hypertension management are in many of the projects.

Our goal is to reduce PPAs by at least 5% each year.

RD-2. 30-day readmissions – This domain will also be important for each of the projects. Our hospital has higher than expected readmission rates and this also will be a major project of the re-engineering process improvement that will be part of each of these projects. Our goal is to decrease the number of readmissions by 5 percent in each of years 4 and 5. This Reporting Domain will be affected by all of the following projects, in much the same manner as RD 1.

1. 126686802.1.1 – Newly established primary care clinic
2. 126686802.1.2 – Expanding existing primary care network
3. 126686802.1.3 – Implementing a Quality Incentive Program for PCP Network
4. 126686802.1.4 – Introduce a Telemedicine/Telehealth system
5. 126686802.1.5 – Newly established specialty care clinic
6. 126686802.1.6 – Develop population management infrastructure
7. 126686802.1.7 – CME Program expansion for community PCPs
8. 126686802.1.8 – Family Medicine Residency training programs
9. 126686802.1.9 – PA program expansion

10. 126686802.1.10 – Training Community Workers
11. 126686802.1.11 – Urgent Care Service for Cancer Patients
12. 126686802.1.12 – Quality Improvement Center
13. 126686802.2.1 – Expanding Medical Home in PCP Network
14. 126686802.2.2 – Expand Quality Improvement Training
15. 126686802.2.4 – Implement Care Coordination with PCP network
16. 126686802.2.5 – Implement Care Transitions with PCP network
17. 126686802.2.6 – Conduct Medication Management
18. 175287501.1.1 – Transplant Program
19. 175287501.2.1 – Implement ED Navigator Program
20. 175287501.2.2 – Implement Palliative Care Program
21. 175287501.2.3 – Transitional Care Services for Cancer Inpatients

Each of these projects will contribute to reducing potentially preventable admissions. Projects 1-6 provide greater access to ambulatory care and additional tools for Primary Care Providers to help patients manage their health with going to the ED or into the hospital. Projects 7-8 involve education providers to use more health care and population management tools to help patients stay healthier. Project 11 and 19 are particularly important in helping cancer patients urgent care support at their ambulatory clinic rather than resorting to an ED visit when complications arise. In its first month of operation, this project document over 40 prevented admissions. Project 19 works with patients when they arrive at the ED to get quicker attention and/or referral to more appropriate settings. Projects 15 and 16 help patient get the next step of care that is too often missed, which can lead to complications in health/disease management and in turn into a PPA. Projects 20 and 21 are also very important in ensuring that patients transition from inpatient settings to either immediate follow-up or appropriate post-acute services that can prevent re-admissions because they focus on continuity.

The associated Category 3 Outcome measures all contribute to managing patients for better outcomes and avoidance of complications that can lead to PPAs. Outcomes measures focusing on Diabetes tests, blood pressure monitoring and hypertension management are in many of the projects. The associated Category 3 Outcome measures all contribute to managing patients for better outcomes and avoidance of complications that can lead to reductions in the 30-day re-admission rates.

Our goal is to reduce PPAs by at least 5% each year.

RD-3. Potentially Preventable Complications (PPCs) – Each of the Category 1, 2 and 3 hospital projects will benefit from decreasing preventable complications of hospitalization. The re-engineering process improvement of each of the projects should result in a decrease in complication for hospitalized patients.

This Reporting Domain will be affected by all of the following projects

1. 126686802.1.12 – Quality Improvement Center
2. 126686802.2.2 – Expand Quality Improvement Training
3. 126686802.2.4 – Implement Care Coordination with PCP network
4. 126686802.2.5 – Implement Care Transitions with PCP network
5. 175287501.1.1 – Transplant Program
6. 175287501.2.2 – Implement Palliative Care Program
7. 175287501.2.3 – Transitional Care Services for Cancer Inpatients

Projects that train physicians and clinical staff in quality/process improvement skills lead to changes in how inpatient care is provided, which can lead to avoiding hospital-acquired conditions that result for poor processes. Care coordination and care transitions that are managed from either the inpatient side or by primary care providers bringing patients back into the community result in closer patient monitoring and avoidance of potential complications. The Transplant program is specifically focused on preventing central line-associated infections.

Our goal is to reduce these complications by 5% per year for years 4 and 5.

RD-4. Patient-centered Healthcare – Both patient satisfaction and medication management/medication safety will be a component measured in all of the patients of hospital projects in this section.

Patient satisfaction surveys are conducted on a sampling of all inpatients and outpatients. Satisfaction results will be tracked for all projects. Survey results are reviewed regularly by the hospitals and clinics.

One project in particular is focused on medication management.
126686802.2.6 – Conduct Medication Management

Our goals in this area will be determined in the DY2 and DY3 with significant improvement expected.

RD-5. Emergency Department – Again all of the hospital projects will be affected by this domain in that all will involve patients with high emergency department utilization. The following projects will have the most direct influence on this reporting domain.

1. 126686802.1.11 – Urgent Care Service for Cancer Patients
2. 126686802.1.12 – Quality Improvement Center
3. 126686802.2.2 – Expand Quality Improvement Training
4. 175287501.2.1 – Implement ED Navigator Program

The first project will provide triage to cancer patients who experience problems and call the Cancer Center. The triage staff will determine if the patient needs to be seen in the clinic within 1 hour of the call, of if they should go to the ED. If the patient is sent to the ED, the Cancer Center staff collaborate with the ED staff to assure prompt and appropriate care so the patient can avoid a potentially preventable admission or a potential complication to their care or condition. Quality improvement training provides clinical staff with the skills to improve processes such as how patients move through the ED. The ED Navigator Program is specifically focused on the Domain due to the very nature of what it is designed to accomplish.

We will set goals for this domain in DY2 based on progress of the hospital projects.

RD-6. Optional Domain: Initial Core Set of Health Care Quality Measures – Since Medicaid funded patients will be included in all of the hospital projects, the core measure compliance rates will be affected by all of these projects. Our eventual goal will be 100% compliance with these core measures but the actual goals for DY4 and 5 will be determined during DY2.

The elements of The Initial Core Set of Health Care Quality Measures for Children in Medicaid and CHIP that will be most affected by our projects will relate to prenatal care, obesity, and obstetrics-related measures. Due to our relationship with Children's Medical Center of Dallas, our pediatricians see most of the children at CMC's clinics. The projects that will influence these measures include:

1. 126686802.1.1 – Newly established primary care clinic
2. 126686802.1.2 – Expanding existing primary care network
3. 126686802.1.3 – Implementing a Quality Incentive Program for PCP Network
4. 126686802.1.4 – Introduce a Telemedicine/Telehealth system
5. 126686802.1.6 – Develop population management infrastructure

6. 126686802.1.7 – CME Program expansion for community PCPs
7. 126686802.1.8 – Family Medicine Residency training programs
8. 126686802.1.10 – Training Community Workers
9. 126686802.1.12 – Quality Improvement Center
10. 126686802.2.1 – Expanding Medical Home in PCP Network
11. 126686802.2.2 – Expand Quality Improvement Training
12. 126686802.2.4 – Implement Care Coordination with PCP network
13. 126686802.2.5 – Implement Care Transitions with PCP network
14. 126686802.2.6 – Conduct Medication Management
15. 175287501.1.1 – Transplant Program
16. 175287501.2.1 – Implement ED Navigator Program
17. 175287501.2.2 – Implement Palliative Care Program
18. 175287501.2.3 – Transitional Care Services for Cancer Inpatients

Projects 1, 2, 3, 4, 8, 9, 10, 12, 13, 14, and 16 will have the most direct impact. Primary care providers, especially obstetricians, address the measures around prenatal care and deliveries most often. Training providers in various ways to more closely monitor and take action with many of the measures will be a key tool in effecting change and improvement.

The Initial Core Set of Health Care Quality Measures for Medicaid-Eligible Adults is addressed in many of the Category 3 Outcome measures associated with many of the projects. More specifically, measures #3, 4, 7, 16, 17, 19, 24 are addressed most often in outcome measures. Many of the other measures are part of the care provided in projects that increase access to primary and specialty care.

The Core set is:

NQF #	Measure Name
1	Flu Shots for Adults Ages 50-64 (Collected as part of HEDIS CAHPS Supplemental Survey)
2	Adult BMI Assessment
3	Breast Cancer Screening
4	Cervical Cancer Screening
5	Medical Assistance with Smoking and Tobacco Use Cessation (Collected as part of HEDIS CAHPS Supplemental Survey)

6	Screening for Clinical Depression and Follow-Up Plan
7	Plan All-Cause Readmission
8	PQI 01: Diabetes, Short-term Complications Admission Rate
9	PQI 05: Chronic Obstructive Pulmonary Disease (COPD) Admission Rate
10	PQI 08: Congestive Heart Failure Admission Rate
11	PQI 15: Adult Asthma Admission Rate
12	Chlamydia Screening in Women Ages 21-24
13	Follow-Up After Hospitalization for Mental Illness
14	PC-01: Elective Delivery
15	PC-03: Antenatal Steroids
16	Controlling High Blood Pressure
17	Comprehensive Diabetes Care: LDL-C Screening
18	Annual HIV/AIDS Medical Visit
19	Comprehensive Diabetes Care: Hemoglobin A1c Testing
20	Antidepressant Medication Management
21	Adherence to Antipsychotics for Individuals with Schizophrenia
22	Annual Monitoring for Patients on Persistent Medications
23	CAHPS® Health Plan Survey v 4.0—Adult Questionnaire with CAHPS® Health Plan Survey v 4.0H—NCQA Supplemental
24	Care Transition–Transition Record Transmitted to Health Care Professional
25	Initiation and Engagement of Alcohol and Other Drug Dependence Treatment
26	Prenatal and Postpartum Care: Postpartum Care Rate

Our related Category 3 Outcome Measures and their associated projects are:

Unique Category 3 Identifier	Outcome Refernce #	Outcome Measure (Improvement Target) Name from RHP Planning Protocol
126686802.3.1	IT-12.1	Breast Cancer Screening
126686802.3.2	IT-12.3	Colorectal Cancer Screening
126686802.3.3	IT-12.4	Pneumonia vaccination status of older adults
126686802.3.4	IT-12.1	Breast Cancer Screening
126686802.3.5	IT-12.3	Colorectal Cancer Screening
126686802.3.6	IT-12.4	Pneumonia vaccination status of older adults
126686802.3.7	IT-12.1	Breast Cancer Screening
126686802.3.8	IT-12.3	Colorectal Cancer Screening
126686802.3.9	IT-12.4	Pneumonia vaccination status of older adults
126686802.3.10	IT-1.6	Cholesterol Management for patients with cardiovascular conditions
126686802.3.11	IT-1.7	Controlling High Blood Pressure
126686802.3.12	IT-1.10	Diabetes care: HbA1c poor control (>9.0%)

126686802.3.13	IT-1.6	Cholesterol Management for patients with cardiovascular conditions
126686802.3.14	IT-1.7	Controlling High Blood Pressure
126686802.3.15	IT-12.1	Breast Cancer Screening
126686802.3.16	IT-12.3	Colorectal Cancer Screening
126686802.3.17	IT-12.4	Pneumonia vaccination status of older adults

126686802.3.21	IT-12.4	Pneumonia vaccination status of older adults
126686802.3.22	IT-1.10	Diabetes care: HbA1c poor control (>9.0%)
126686802.3.23	IT-3.1	All cause 30 day readmission rate
126686802.3.24	IT-5.1	Improved cost savings: Demonstrate cost savings in care delivery
126686802.3.25	IT-1.10	Diabetes care: HbA1c poor control (>9.0%)
126686802.3.26	IT-3.1	All cause 30 day readmission rate
126686802.3.27	IT-1.10	Diabetes care: HbA1c poor control (>9.0%)
126686802.3.28	IT-3.1	All cause 30 day readmission rate
126686802.3.29	IT-1.20	Other Outcome Improvement Target: Number of primary care practitioners in HPSAs or MUAs who report they plan to implement chronic disease management
126686802.3.30	IT-14.1	Number of practicing primary care practitioners per 1000 individuals in HPSAs or MUAs
126686802.3.31	IT-14.4	Number of graduates who practice in a HPSA or MUA
126686802.3.32	IT-1.7	Controlling high blood pressure
126686802.3.33	IT-9.2	ED appropriate utilization - Reduce ED visits for target conditions
126686802.3.34	IT-2.13	Other Admission Rate - admissions due to complications of cancer treatment
126686802.3.35	IT-3.1	All cause 30 day readmission rate
126686802.3.36	IT-3.12	Other - readmission rate (Medication complications)

175287501.3.1	IT-1.20	Other Outcomes Improvement Target. Outcomes of Bone Marrow and Solid Organ Transplant
175287501.3.2	IT.2.12	Prevention Quality Indicators (PQI) Composite Measure Potentially Preventable Hospitalizations for Ambulatory Care Sensitive Conditions

175287501.3.3	IT-13.1	Pain Assessment
175287501.3.4	IT-13.2	Treatment Preferences
175287501.3.5	IT-13.5	Percentage of patients receiving hospital or palliative care services with documentation in the clinical record of a discussion of spiritual/religious concerns or documentation that the patient/caregiver did not want to disucss.
175287501.3.6	IT-3.2	Other - Readmission Rate. Cancer Patient Readmissions.

Domain Valuation: The valuation for each domain considered various factors including size of the domain, project scope, populations served, community benefit, cost avoidance, addressing priority community need, and estimated local funding.

Category 4: Population-Focused Measures *University of Texas Southwestern University Hospitals/TPI 175287501*				
	Year 2 (10/1/2012 – 9/30/2013)	**Year 3 (10/1/2013 – 9/30/2014)**	**Year 4 (10/1/2014– 9/30/2015)**	**Year 5 (10/1/2015– 9/30/2016)**
Capability to Report Category 4	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.	**Milestone:** Status report submitted to HHSC confirming system capability to report Domains 3.		
Estimated Maximum Incentive Amount	$468,721	$500,000	$0	$0
Domain 1: Potentially Preventable Admissions (PPAs)				
Planned Reporting Period: 1 or 2		2	2	2
Domain 1 - Estimated Maximum Incentive Amount	$0	$225,986	$290,608	$315,878
Domain 2: Potentially Preventable Readmissions (30-day readmission rates)				
Planned Reporting Period: 1 or 2		2	2	2
Domain 2 - Estimated Maximum Incentive Amount	$0	$225,986	$290,608	$315,878
Domain 3: Potentially Preventable Complications (PPCs) Includes a list of 64 measures identified in the RHP Planning Protocol.				
Planned Reporting Period: 1 or 2			2	2
Domain 3 - Estimated Maximum Incentive Amount	$0	$0	$290,607	$315,878
Domain 4: Patient Centered Healthcare				
Patient Satisfaction - HCAHPS				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Medication Management				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Domain 4 - Estimated Maximum Incentive Amount	$0	$225,986	$290,607	$315,877
Domain 5: Emergency Department				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Domain 5 - Estimated Maximum Incentive	$0	$225,986	$290,607	$315,877

Amount				
OPTIONAL Domain 6: Children and Adult Core Measures				
Frequency of ongoing prenatal care				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Timeliness of prenatal care				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Cesarean rate for low-risk first birth women				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Percent of live births weighing <2500 grams				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Pediatric central-line associated bloodstream infection (CLASBI) rates				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Elective delivery prior to 39 weeks completed gestation				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Appropriate use of antenatal steroids				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Postpartum Care Rate				
Measurement period for report		12-month	12-month	12-month
Planned Reporting Period: 1 or 2		2	2	2
Domain 6 - Estimated Maximum Incentive Amount	$0	$225,986	$290,607	$315,877
Grand Total Payments Across Category 4	$468,721	$1,629,929	$1,743,644	$1,895,265

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Certifications Follow in This Order

Entity / System	Entity Type	Plan Participation
Baylor Health Care System	Hospitals	4 DSRIP Performing Providers 2 UC-Only Hospitals
Children's Medical Center Dallas	Hospital – Children's	1 DSRIP Performing Provider
HCA North Texas	Hospitals	4 DSRIP Performing Providers 1 UC-Only Hospital
Methodist Health Care System	Hospitals	3 DSRIP Performing Providers
Parkland Memorial Hospital	Hospital	1 DSRIP Performing Provider
Tenet North Texas	Hospital	1 DSRIP Performing Provider
Texas Health Resources	Hospitals	3 DSRIP Performing Providers
Terrell State Hospital	Hospital	1 UC-Only Hospital
UT Southwestern Medical Center	Academic Physician Practice Plan Hospital	2 DSRIP Performing Providers
Dallas County Health and Human Services	Local Health Department	1 DSRIP Performing Provider
Denton County Health and Human Services	Local Health Department	1 DSRIP Performing Provider
Dallas County MHMR / Metrocare Services	County MHMR	1 DSRIP Performing Provider
Denton County MHMR	County MHMR	1 DSRIP Performing Provider
Lakes Regional MHMR Center	County MHMR	1 DSRIP Performing Provider
Ector County Hospital District	IGT Source	IGT Entity
Texas A&M Health Science Center – Baylor College of Dentistry	Other	1 DSRIP Performing Provider

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Fred Savelsbergh	Baylor Heart and Vascular Hospital
	Fred Savelsbergh	Trinity Medical Center d/b/a Baylor Medical Center at Carrollton
	Fred Savelsbergh	Baylor Medical Center at Garland
	Fred Savelsbergh	Baylor Medical Center at Irving
	Fred Savelsbergh	Baylor Specialty Hospital
	Fred Savelsbergh	Baylor University Medical Center

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Ray Dziesinski	Children's Medical Center Dallas

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Kathleen Sweeney	Denton Regional Medical Center
	Kathleen Sweeney	Green Oaks Hospital
	Kathleen Sweeney	Las Colinas Medical Center
	Kathleen Sweeney	Medical Center of Lewisville
	Kathleen Sweeney	Medical City Dallas Hospital

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
Michael Schaefer	Michael Schaefer	Methodist Charlton Medical Center
Michael Schaefer	Michael Schaefer	Methodist Dallas Medical Center
Michael Schaefer	Michael Schaefer	Methodist Richardson Medical Center

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Ted Shaw	Parkland Memorial Hospital

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Wes James	Doctor's Hospital at White Rock Lake

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Britt Berrett	Texas Health Presbyterian Hospital Dallas
	Stan Morton	Texas Health Presbyterian Hospital Denton
	Patsy Youngs	Texas Health Presbyterian Hospital Kaufman

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
W.R. Wheeler	Bill Wheeler, CFO, DSHS	Terrell State Hospital

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Bruce A. Meyer, MD, MBA	UT Southwestern Medical Center – Faculty Practice Plan
	Bruce A. Meyer, MD, MBA	UT Southwestern Medical Center – St. Paul University Hospital

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Zachary Thompson	Dallas County Health and Human Services

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

	Bing Burton	Denton County Health Department

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
Linda Thompson	Linda Thompson, Interim CEO	Dallas County MHMR Center d/b/a Metrocare Services

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
Pam Gutierrez	Pam Gutierrez	Denton County MHMR

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	John Delaney, Exec. Director	Lakes Regional MHMR Center

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	William Webster	Ector County Hospital District

Section VI. RHP Participation Certifications

Each RHP participant that will be providing State match or receiving pool payments must sign the following certification.

By my signature below, I certify the following facts:

- I am legally authorized to sign this document on behalf of my organization;
- I have read and understand this document;
- The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.

Signature	Name	Organization
	Daniel L. Jones, DDS, PhD	Texas A&M Health Science Center – Baylor College of Dentistry

Section VII. Addendums

- *Private hospital certifications – refer to Companion Document for additional details.*
- *List of DSRIP projects that were considered but not selected for inclusion in the RHP Plan*
- *Signed agreements of small hospitals participating in a collaboration in Pass 1 as allowed in the PFM Protocol, paragraph 25.c.iii.*
- *Signed agreements of Tier 3 and 4 Performing Providers that combined their Pass 1 allocations as allowed in the PFM Protocol, paragraph 25.c.iv.*
- *Signed agreements of Performing Providers that combined their Pass 2 allocations as allowed in the PFM Protocol, paragraph 25.d.iii.*
- *Optional: additional community assessment information*
- *Optional: supporting evidence of stakeholder participation (e.g. meeting lists, minutes, letters of support)*
- *Optional: additional valuation information*
